It ain't yer ears Cecil, it's well-known fact that several of the
digital modes can outperform cw with respect to weak signal
performance and Pactor II is at or near the top of that list. But
particularly in the case of Pactor II there are a lot of hardware
dollars involved beyond just the radio. Not a show stopper but ya can
buy a decent kit qrp cw xcvr for less dinero than ya hafta pop just
for the Pactor modem.

A PACTOR II modem only costs 15% as much as an IC-775. :-)

You are looking at the problem from the wrong end.

It is not important to know power levels -- only that, for use as a
weapon, they would swap anything for speed. A wider beam will require
more power to get the same depth of damage in the same time frame.
Thus, the beam is narrow to get more depth (and speed) from the same
power.

Unless, of course, you plan to require the targets to stand absolutely
still for 9 seconds, just so you can double the beamwidth and get the
same results . . .

>whether you like them or not.

You're the one who asserts that people who are not amateur radio operators
are not forced (required by circumstance) to take a code test even if their
circumstance is a personal whim or desire is to become a ham, so it
obviously matters to you despite your protest that it doesn't. What do
you have against personal whims and desires, that this particular
circumstance entirely precludes one from being "forced (required by
circumstance)"?

Whether it matters to me or not is irrelevant. Everyone is forced to
meet the requirements no matter how he/she feels. Happy people and
angry people alike are required by circumstances to meet the same
requirements.

> What do
> you have against personal whims and desires, that this particular

I don't have anything against personal whims and desires. But when
it comes to governmental requirements, personal whims and desires
are simply irrelevant. Are you saying, "Relax and enjoy it and
then it's not rape."?

But your statement is incorrect. HF hams are NOT forced to learn and
pass a test.
All citizen applicants are required by law to pass the tests required.
Once they do that, then and only then are they HF hams.

How is it than that so many people have never heard of ham radio if they
were all forced to take tests?

Lennie:

The AMA still exists, and it is bigger than ever. With your membership comes a subscription to their journal, _Model Aviation_. You can also purchase it on newsstands, if you want to get a copy and catch up on the latest that aeromodelling has to offer.

Lets not make this a political issue, or divide ourselves by trying to blame individual groups. Its not about Democrats or Republicans (the research had to have started while Clinton was in the White House, but I don't doubt Bush will love it).

Instead, this is about everybody outside of the power elite, and _ALL_ of us will have to live with this stuff in the future.

Your attributed the above to the wrong person, W4JLE. I didn't write the material you quoted - it was written by someone else in reply to something I had written earlier. And you may want to read what I wrote in reply to that (about not turning this into a political debate between the two parties).

```

Since it's stated purpose is "crowd control," I don't think that the beam on the fully functional unit will be that narrow. Since it's vehicle mounted, one could sit inside an armored vehicle, or in a concealed position, to use it.

Just for kicks, what happens if it is left on for say 2 minutes instead of the recommended 3 seconds. Do you come out looking like a cup of coffee hot from the microwave? What if you put it in a storeroom in a skyscraper, preset a timer, and just left it on?

The possibilities are endless...and a little scary.

>>What lie? What distortion?
>
>The lie plus distortion is in saying that my undisclosed motives
>are whatever you say they are. You cannot know this, yet you
>persist in "knowing" what they are.

No, Len. You are way off base on this whole thing.

What I wrote (above) is a logical conclusion derived from things YOU wrote.

I previously wrote:

"You simply don't like the idea that hams are not all "appliance operators"."

And you replied:

"Quite true",

Those are your EXACT words. Where's the lie? Where's the distortion?

You also wrote, in that same sentence:

"but, under FCC regulations for a long, long time, US radio amateurs can be ONLY appliance operators."

This phrase does not change the meaning of the "quite true" part.

You have agreed that you don't like the idea that all hams are not appliance operators. By basic logic, you would like it if all hams WERE appliance operators, and none of them built anything.

No lie. No distortion. Just basic logic applied to your own words.

Now maybe you didn't mean to write "quite true" in response to my statement. Maybe you like the idea of hams building their own gear. If so, why not clarify

the situation?
>
>You are fabricating a false condition without knowledge of
>another, then arguing against that false condition.

No, I'm not. I'm simply analyzing what YOU wrote. Refute the analysis, if it's not correct. Clarify your statement - don't shoot the messenger.

>You are
>really arguing against yourself.

Not me. But I'm beginning to think that there is no point in responding to your posts.

>It would be better for you to
>have another account-and-handle,

That's what YOU do, Len. Since I've been reading newsgroups, you've had at least four AOL screen names: "nocwtest", "lenof21", "averyfine" and "lenover21". All that time I've just been myself. When I had a deja account I purposely chose a screen name as close to my AOL one so there would be no confusion.

You're the one who keeps changing IDs.

>then you could send
>yourself or rather yourselves messages "debating" something.
>[hopefully in private e-mail to avoid large storage space]

It's clear to me that you don't want to discuss any thing here.
>
>You have done a lot of such fabrication of false conditions

Where?

>and (in a very long post) insist on debate of single sentences.

Is that not allowed? Who made you god?

If my analysis of the quoted sentecne and your reply is not correct, then refute the analysis.

>That's a useless exercise, wastes time just to gain message
>points.

What are "message points"? I have never heard the term used by anyone other than you.

> If you think you gain points by taking so much time,
>feel free to call yourself a "victor" and give yourself a high-five.
>You've not won anything. :-)

I have no idea what that is supposed to mean.

Looks to me like you realize that I've argued you into a logical corner. Rather than refute the argument or maybe clarify one of your statements, you start the

name-calling game. Doesn't work on me, Len.

You claim to see in others the very behaviors you demonstrate. The psych types call that "projection", I think. Well, have fun with it.

Check out QST for June, 1994. Page 55, I think. True story - but the rig
described is the predecessor to what I use now. The cartoon is from the cover
of a 1951 QST.

Absolutely. Or, you could gamma-match the 30 ft tower and feed it on 80/40
meters. Probably need some radials, too.

>was not allowed reasonable privileges on HF ham bands until the 90s.

By the definitions set forth by the FCC, a pre-1990 "competent ham" had to pass
the 13 wpm code test for what you call "reasonable privileges". Also had to
pass 20 wpm for full privileges after 1968.

The FCC's definition of "competent ham" has wandered all over the map. For the
past 30 years or so they have been gradually reducing the test requirements
that a person has to meet to qualify as a "competent ham". For several years
before that, they increased the requirements for that same definition.

How many hours a person has to spend studying something to learn it is often a
reflection of poor study methods. Many of the code study methods used are very
inefficient.

For a good book on the subject, see:

http://www.raes.ab.ca/book/index.html

I think they did. Why do something illegally if you can do it legally with just
a small investment?

There was also the purpose of repelling illegal stations by increasing ham use
of 10 meters, even during sunspot minima.

Ham activity on 10 meters used to rise and fall with the sunspot cycle. Before
"Novice Enhancement", almost all hams who had 10 meter priviliges also had lots
of privs on all the other ham bands, so there was no compelling reason to use
10. Novices and Techs were limited to tiny slices of a few HF bands, and were
allowed only Morse on HF. "Freebanders" or "HFers" (or whatever you want to
call illegal unlicensed folks) started showing up in the 10 meter band, using
modified CB gear or old ham gear. This was going on as long ago as the '70s. By
filling the band up with hams, the logic went, those illegal stations would be
pressured to go elsewhere.

Tsk, tsk indeed. C'mon Lennie, fess up! It wasn't very long ago that
in an exchange with Ed Hare, you made the statement I attribute to you
after Ed suggested that you join the League.

You've said much, much more about the ARRL over the period of several
years. Your "right to comment" has been used to lambast the League on
more than one occasion. The statement you made in the exchange with Ed

Hare is archived too. Anyone who cares can check out your numerous
posts and see if your "falsehoods, lies and innuendo" charge is true.

Right. Bring up the term "AMA" in a room full of people and see how
many believe that you mean the Academy of Model Aeronautics. I suppose
that you once worked for the FBI--"Finnegan's Bottled Ink".

> >Which lies and fabrications, Len, Lennie, Len Over or whatever? You are

I know what the ARRL by-laws state, Len. I also know what YOU stated.
My disagreement is not with the League but with you.

> Davie boy, you are reaching way too far to try to develop some kind
> of "issue" here. Don't go there, it leads to nowhere.

Changing your tune? You've made some charges of "falsehoods, lies and
innuendo" in a strongly worded post. You've now soft pedalled and back
pedalled.

> >Time for you to fess up...
>

> I've never written that I've "wanted to become an ARRL member."

While that's not exactly what you've written, you have made numerous negative comments about the League. I've never said that you wrote that you wanted to become a League member. I wrote that you said you refused to become a League member because you would not have a vote in League affairs.

> You might need to print that out, Davie. Maybe off-line reading

Izzat right? I think I understand you pretty well, Len. You're currently not doing a very good job of negating your prior statements. I've not attributed anything to you which you didn't state here.

You seem to be admitting that you fraudulently obtained your Extra
license. Please tell us exactly how you got an Extra class license
without being required by circumstances to pass the Extra class exam.
The government forces everyone to meet the requirements for Extra
before awarding the Extra class license. Exactly how did you get out
of meeting those requirements?

Your two sentences contradict each other, Dick. Which is it? If someone
is required by law (required by circumstances) to pass a test then they,
by definition, have been forced (required by circumstances) to pass a test.
"Required by law" is just another way of saying "required by circumstances"
and is the dictionary definition of "forced". You simply cannot have it
both ways.

Please explain to us how you became a ham without meeting the requirements.
Governmental requirements are prima facie evidence of force.

Cecil:

If a woman "relaxed and enjoyed" an initially unwanted sexual act
and then admitted to doing so, she would have a difficult, if not
impossible task ahead of her proving that she was raped.

After I gained the intellectual and emotional intelligence and maturity
to accept the fact that I needed to learn the Morse code in order to
be an amateur radio operator with HF privileges, I found meeting that
particular requirement to be fairly easy, enjoyable, and in the whole,
a highly satisfying experience. You, on the other hand, have gone
on for days, whinging about being "forced" to do it. Again I ask, for
you have not yet answered, what is the point of this constant, tiring,
pedantic, and boring discussion of "force" re: the Morse code testing
requirements? Is there a point at all, or are you just trying to prove,
beyond a shadow of a doubt, just how big a jerk you can be?

Source record: 4436

Hi everyone,

I have a qustion for you. It's friendly in nature so please check your judicial robes at the door, thanks. I'm posting it here because I truly believe that this group is more knowlegeable re. rules, regs, and the FCC in general.

Does any body know if the 155 mi rule has ever been enforced and what the "realistic" penalty is?

Please leave linear amplifiers, non class D type-accepted radios, export radios, modified radios, and other violation out of this picture. I mean an unmodified (except for increased SSB receive filtering) 12 watt Uniden Grant XL feeding a four element wire quad at a height of approx. 65 ft. (legally suspended in trees) fed by true ladder line via a Palstar AT1500C tuner. (what a beauty...what a brute!) The mic's a D-104 TUG-8 (modified for fuller base) and the receive audio is routed through a DSP-599zx. Thanks in advance for your replies and please, let's try to keep it nice. Thanks again.

Cecil:

In order to be "forced" to do something, one must be influenced by
threat of negative consequences to do the "required" action against
his free will. HF hams do NOT take Morse code exams unless they
voluntarily consent to do so. Without such voluntary consent, the FCC
has no way to levy this testing upon the individual; however, they will
refuse to grant the license. The license is not granted unless the
individual voluntarily takes and passes the tests. No "force" is applied
other than the FCC's observence of its own rules and regulations,
which are public law.

Again, I ask you to give up your foolish quest to prove the unprovable.
Nobody is "forced" to take Morse code tests. "Required by circumstances"
is obviously a very distorted and false definition of the word "forced,"
at least in this context.

Larry, you should know by now that Lennie has NO desire to offer ANY opinion, comment or assertion from an "informed" position.

Logic that even the fictional Mr. Spock would find too simplistic would have suggested that "Mr. I Have All The Time In The World" could have spent 5 minutes surfing the web to find out that which you already knew...but hey, then he wouldn't have had anything to make his smart alec remarks over.

Nothing like facts to ruin a LennieRant.

Nope. I'm just pointing out that the auto transmission analogy isn't perfect. Choice of transmission doesn't have much effect on other drivers. Choice of mode does.

>which
>is not the purpose of the requirement.

The test requirements have a variety of purposes. They vary over time, too. What those purposes should be has long been a subject of debate.

The problem I see here is that your argument carries with it some baggage from the earlier discussion, when you implied that the government should not force radio amateurs to do certain things. From what you've said in this latest round, it seems as though you're using the word force to describe the simple fact that the government has requirements that must be met for obtaining an amateur license. This time without commentary as to the merit of those qualifications. Is this an accurate summary?

Let's take the sentence as written. We'd have to take "the man"--that
would be you, for (here comes the verb) "figuring" and what did you
figure?--"how to turn upgrading into..."--into what?--"a criticible
offense". You, Cecil, have turned something into a criticizable
offense. Yep, I criticized you for being two faced because you did
something you swore you'd never do. There's your free English lesson
for this week.

Larry, I'm no more responsible for my mother's driving than I am of your driving. She is a free individual, with a legal right to drive that vehicle. And, as long as the state issues her that license (and they are already aware of her driving record), she has a right to drive and there is not a thing I can do about it.

Now, I can talk to her, and even urge her not to drive, but that is as far as I can legally go (restraining her would be a crime).

> *I* did it willingly! Sorry about you!

If you met the requirements, Dick, you were required by circumstances
to meet them. Governments force requirements upon citizens in return
for privileges granted. That's what governments do. If you were not
required by circumstances to pass the ham exams then you never passed
them and are therefore a criminal. So which is it, Dick? Did you meet
the requirements or not?

It doesn't matter if you willingly or unwillingly met the requirments.
Either way, you were required by circumstances (forced) to meet the
requirements. Your fuzzy feelings about it just don't matter.

Anyone is free to check out archives. Archived posts can be cut
and pasted in here...to form another endless non-debate where you
"analyze" the archives to "prove" some personal obsession of yours.

Yawn.

>Right. Bring up the term "AMA" in a room full of people and see how
>many believe that you mean the Academy of Model Aeronautics.

I don't expect anyone to know about the Academy of Model
Aeronautics...except the number of model hobbyists in the USA
who are members, their families and friends. According to Larry
Roll, the (model hobbyist) AMA is still active.

I used to know a medical doctor who liked model aircraft building
and flying. He used to joke about being a member of two AMAs.
He had a sense of humor. You should try it sometime, you
might like it...

>I know what the ARRL by-laws state, Len. I also know what YOU stated.
>My disagreement is not with the League but with you.

That disagreement is quite evident. Few care about that.

You keep arguing about "what I (supposedly) wrote" but you don't
show any quotes of it, don't refer to it except in vague generalities.
If you are unable to quote it, then refer to some disinterested
third-party reference where others can go look for it...please use
definite dates, newsgroup, screen name, and other details.

>> Davie boy, you are reaching way too far to try to develop some kind
>> of "issue" here. Don't go there, it leads to nowhere.
>
>Changing your tune? You've made some charges of "falsehoods, lies and
>innuendo" in a strongly worded post. You've now soft pedalled and back
>pedalled.

No. You're becoming obsessed with proving another's Wrongdoing.
You haven't really presented any case yet except some personal
opinions which have been distortions and untruths.

If you wish to create a long and boring thread in the form of a
kangaroo court where you want to be judge, jury, and executioner,
feel free. That wastes everyone's time and is boring. Hardly
anyone cares for any outcome of a personal vendetta.

>Time for you to go easy on accusations of untruth unless you are sure
>that your record on the matter is clean.

Quit stowing your throne in a glass house.

You are now implying badness in the past...based on nothing but
some vague statements of your (very biased) opinion.

>While that's not exactly what you've written, you have made numerous
>negative comments about the League.

Yes. I've also made some positive comments. The ARRL is not
divine, it's policies are made by men not gods.

>I've never said that you wrote that
>you wanted to become a League member. I wrote that you said you refused
>to become a League member because you would not have a vote in League
>affairs.

Put it away, Dave. You are getting tiresome. Unlicensed members
of the ARRL do not have voting privileges. That was what I've
written. I've never written "why I will not join the ARRL."

You state I've written something. You have no evidence to present
in this kangaroo court of yours and yet you "challenge" me to
refute something. No one can refute something that doesn't exist.

>Izzat right? I think I understand you pretty well, Len. You're
>currently not doing a very good job of negating your prior statements.
>I've not attributed anything to you which you didn't state here.

I cannot "refute" something that doesn't exist. You cannot "charge" anyone of "wrongdoing" without valid evidence. If you have evidence, show it. If not, shut the hell up and go look for others who can be pushed around by your Dill Instructor attitudes.

Remember, you are an example of the "highest" class license in US amateur radio.

>>and (in a very long post) insist on debate of single sentences.
>
>Is that not allowed? Who made you god?

Startling question. When did theology enter into this?

The technique of "analyzing" single sentences by taking them
out of context is done by a few who have: (1). A lot of time to
play on the screen; (2). An insistence on "being right" any which
way they can in an exchange.

That isn't any theology but just an observation of BBSs, ARPANET,
USENET, INTERNET behavior over the years as practiced by some
who have a compelling obsession to have the Last Word. :-)

>If my analysis of the quoted sentecne and your reply is not correct, then
>refute the analysis.

When I find a "sentecne" I'll look at it and analyze it. Other than that
I believe we were talking about "sentences."

"Sentence analysis" has already been done. You don't accept it. Have
you accepted any "analysis" of your words done by anyone else? :-)

Yes. "Working skip" sweeps are done periodically, and if there
is an indication that the station might be running power, an
inspection is made (or at least attempted).

Violation penalties are in the $2000 per violation range for
first offense and it goes uphill from there.

That's but one definition of "forced". Another is "required by
circumstances". You and Dick were certainly required by circumstances
to meet the requirements for an amateur radio license. If you did
not meet those requirements, then you are a criminal.

> HF hams do NOT take Morse code exams unless they voluntarily consent to do so.

How they feel about it is irrelevant. Pre-HF hams take Morse code exams
because they are required by circumstances to do so. That's the
dictionary definition of "forced", Larry.

> The license is not granted unless the
> individual voluntarily takes and passes the tests. No "force" is applied
> other than the FCC's observence of its own rules and regulations,

But that is exactly the force we are discussing, Larry. The force of laws
and regulations dictate that amateur radio operators are required by
circumstances to meet the requirements. That's the dictionary definition
of "forced", Larry.

> Again, I ask you to give up your foolish quest to prove the unprovable.
> Nobody is "forced" to take Morse code tests. "Required by circumstances"
> is obviously a very distorted and false definition of the word "forced,"

Your feelings don't matter, Larry. Governments force their citizens to
obey laws and meet regulations. That's what governments do. That you
suffer from the Stockholm Syndrome is irrelevant. If you don't like
that definition of "force" take it up with Barnes & Noble/Random House.

The distance rule (250 km) was necessary to make it fit the definition of Land Mobile. To my knowledge, no one has cared before or since. If you were picked out in some bungle, my guess is about a $300 forfeiture at worst given it was in the legal 40. If not, skip is the least of your worries.

Why do you feel it necessary to recite your equipment list?

Dick N BK

It doesn't matter how you felt about it, Larry. If you wanted to be a ham,
you were required by circumstances (forced) to meet the requirements. If
you didn't honor those requirements, you are a criminal.

Once more, please point out the faulty logic:

Axiom/definition: From Webster's: "forced - required by circumstances"

Premise: US HF hams were forced to pass a Morse code exam.

Proof: US HF hams were required by circumstances (FCC regulations) to
pass a Morse code exam.

Conclusion: US HF hams were forced to pass a Morse code exam.

It doesn't matter whether they felt good or bad about it, Larry.
Their feelings were irrelevant.

>you are just distorting things again.

Again, such an "admonition" coming from Lennie the Obfuscator Supreme is a joke.

>Anyone is free to check out archives. Archived posts can be cut
>and pasted in here...to form another endless non-debate where you
>"analyze" the archives to "prove" some personal obsession of yours.

And if they do, they will (again) prove you a liar.

WHY do you insist on making SUCH A FOOL out of yourself, Lennie?

>I don't expect anyone to know about the Academy of Model
>Aeronautics...except the number of model hobbyists in the USA
>who are members, their families and friends. According to Larry
>Roll, the (model hobbyist) AMA is still active.

Yet you attempted to use the (hobbyist) AMA as an analogy vis-a-vis the ARRL based upon 20 year old information

>>I know what the ARRL by-laws state, Len. I also know what YOU stated. My disagreement is not with the League but with you.

>That disagreement is quite evident. Few care about that.

Your definition of "few" is unique.

>If you are unable to quote it, then refer to some disinterested
>third-party reference where others can go look for it...please use
>definite dates, newsgroup, screen name, and other details.

Deja (cum Google), almost eveyday you post, RRAP, Lenover21, Lenof21, AveryFine, NoCWTest.

We could cut and paste your lies all day and all night. Those that want to search it out, will.

Outside of matters technical, you have no respect here, Lennie. You have YEARS of DOCUMENTED lying in this forum. Even those who essentially agree with your positions would rather you didn't address them in public. Guilty by association, as it were.

>You haven't really presented any case yet except some personal
>opinions which have been distortions and untruths.

No, he hasn't.

>If you wish to create a long and boring thread in the form of a
>kangaroo court where you want to be judge, jury, and executioner,
>feel free. That wastes everyone's time and is boring. Hardly
>anyone cares for any outcome of a personal vendetta.

Yeah, Dave. Don't butt in on Lennie's gig.

>You are now implying badness in the past...based on nothing but
>some vague statements of your (very biased) opinion.

Judging by the comments of several others here (excluding Dave and
myself), those opinions are more widely held than I am sure you'd care to
admit.

> I've never written "why I will not join the ARRL."

Yes you have, and no, I am not going wading through 10,000 posts by Lennie
the Liar Anderson is one of your many permeations.

>Remember, you are an example of the "highest" class license in
>US amateur radio.

And I am sure you'd LOVE for us to just step aside and allow you to
continue your hate-mongering unchecked.

Sorry.

All I can say is: Too little, too late. This repeater and the majority of its usergroup has been a problem for over 10 years. The only reason why the Southern California amateur community tolerates it is because it keeps all the misfits in one place.

I hope Riley realizes that he is going to have to deal with all these misfits first. Should he order the repeater itself off (and the one on 145.460- as well), the "group" will end up trashing all the other repeaters in the area, just like they did in 1993, around the time of the Malibu fires and before they settled on harassing the 145.220- repeater sponsored by CLARA. What I'm saying is that if Riley doesn't take his enforcement steps in the correct order, he may cause more damage than good in the region.

What kind of anti American rock did you crawl out from
under ? This weapon is a NON lethal tactical weapon. I
suggest you put your sorry ass in a "peace keeping", or
"law enforcement" role that US military forces deployed
on in the past - and then when a hostile crowd (a crowd
including both military and civilians), is intent on
decaptitating your head and carrying it around on a pole,
you come back here and report how you shot and killed all
the women and children brandishing knives... or would you
rather hold your fire and give up your life - because you
have such moral ideals.

If my men are under fire by civilians, and if I have a non lethal force option to employ, i will use it, but, given the absence of one, escalating to lethal force is the last alternative.

Any professional soldier will tell you they do not wish to harm civilians, this is the impetus for this new technology. It is an effective deterrent, publicity not withstanding.

And before you shoot your socialist mouth off, I suggest you remember the incident in the streets of Mogadishu, Somalia back in 1993. Where the body of a US Army Ranger was being dragged naked thru the streets, an angry mob, including women and children - cheering at the sight. I suggest you read the book "Black Hawk Down".

People like you would prefer my comrades and I in arms, simply ask the enemy really nicely "oh would you please not hurt us?". While they cut our throats and spit on, and burn the American flag for the anti western crowds that have not so friendly intentions for the U.S.

This technology is another tool, another option for our commanders in the field to accomplish their missions. The ultimate tactical applications, and ROE's regarding the technology would no doubt have to be worked out, but having it is better than not having it.

>a
>>full-privileges license. I can post a detailed list, if you want.
>
>Look at the General (full HF) requirements for the 50s and 60s
>and tell us how that compares.

I would say that the General of the mid-60s, compared to the technology and regs of its time, required at least as much as the Extra of today. Probably more. Of course the areas covered in the exams, and the exam process, are quite different.

I specifically chose 1971 because that was about the "high water mark" for test requirements vs. privileges granted. In 1971, the Novice had no voice privileges and was a 2 year, one-time license. Technician had no HF/MF at all - they didn't even get all of amateur VHF/UHF, yet the Tech required 5 wpm and the same written as General. The privileges of a General or Conditional were at their lowest point compared to the full privileges available to a US ham.

There was still a 2 year waiting period to even take the Extra test. For a General or higher, you had to go to an FCC exam point unless you were way out in the boonies or physically disabled (and the area that qualified as "way out in the boonies" was very limited). Novices and Techs had to take their exams by mail, using a process that took about three months from start to finish if you didn't fail anything.

No Bash books, no CSCEs, no VECs or test sessions at hamfests, all test questions were secret and you had to wait 30 days minimum to retest. Because of all the effort one had to expend just to get to a test session, most hams back then tended to overprepare for the exams.

Since about the mid '70s, the trend has all been toward making the licenses easier to get. In many ways, I think that's a good thing. For example, being able to take exams at a hamfest on a weekend sure beats having to travel long distances to an FCC office to take the same exam on a weekday.

The FCC's ideas on ham license requirements have wandered all over the map in the past 50 years. Before 1953, the license requirements for full privileges (Class A) were very tough, particularly the writtens. In 1953, Generals, Conditionals and above got all privileges in a surprise move by the FCC. But after a few years, the FCC rethought its decision and the whole process that led up to the 1968 "incentive licensing" changes came to be.

The FCC thought as early as 1958 that the requirements for full privileges (General/Conditional) were way too easy. And they were primarily concerned with the written test requirements, not the code tests. The code test stuff came later - and it was not the ARRL's idea.

The period of "Generals get it all" was actually quite short - 15 years and 9 months. It was the exception, not the rule. The people who were running the FCC back then are almost certainly all gone now. The philosophy has come almost full circle.

Ask Phil Kane - he was there.

Make no mistake - the FCC is quite clearly acting to reduce illegal operation by making legal operation easier.

The basic question is this: Why operate cb illegally? Why "freeband" when ham radio offers so much more? As I see it, there are only three explanations:

1) To do things that ham radio does not allow legally. Examples are commercial uses, jamming, music, operation without proper ID, superpower, obscenity/profanity, etc.

2) To be part of a subculture that supports the activities of 1)

3) To avoid the test and license requirements for a ham license.

Making ham licenses easier to get won't address 1) or 2), but will affect those people primarily motivated by 3).

>>Please understand, I'm not saying this was the ONLY reason for the changes -
>>just that it was one of them. And I'm not saying that these changes were all
>>bad, either. I'm just explaining my view of part of the FCC's motivation and
>>thinking on the subject, and how it has changed from the heyday of
>"incentive
>>licensing" to now.
>
>As above, different people see different reasons behind
>FCC actions.

Of course. And there are almost certainly multiple reasons behind their actions. Reducing the drain on FCC resources is a BIG factor, too, and has been for a long time.

Think about that question, though. Why would anyone operate illegally when so much is available legally?

Unfortunately it's history goes back even farther. I was stationed there
in '79 and it was a roaring mess then. I know for a fact that ove 10 hours of
tapes were hand delivered to the FCC office in LB, to a "Polish Salute" and a
"sorry...we're broke". response.

I am glad to see it's going to be under the gun.....I just hope Riley
drops the hammer and drops it hard.

A good Commander in Chief, and proper rules of engagement, will correct this problem. If the enemy is presenting an immeadiate threat to the lives of our soldiers, they should be taken out. Period. Man, women, child, black, brown, etc. makes no difference once they take up arms and try to attack our soldiers, they become the enemy.

>
> If my men are under fire by civilians, and if I have a

Personally, I would say to run up a few Blackhawks and test out the mini-guns. Funny thing about a riot, when you shoot a few at the front, the rest go home.

The only problem is that this tool is targeted for domestic use, and the military has not disclosed the whole truth about this weapons' real capabilities. Couple this device with the testing of HAARP's mass mind altering potential, and you start to wonder what these devices are really being developed for...

<< I recently reinstalled my 10 meter rig in the car and I have been monitoring 28.085 (AM mode) while driving around. It is astounding to hear how many truckers are using this as a "company" channel. >>

In my younger days as a HAM - when 11 meters was one of "my" bands - we thought it was terrible when the FCC turned the frequencies over to CB. One of the plus factors turned out to be that most of the bootleggers back then switched over to CB, and the bootleg problem went to NIL. Just like "incentive licensing", things seem to have gone full circle.

The good news on 10M bootleggers is that find there is usually some ham monitoring soon after a phone station pops up deep in the 10M CW section. Once I'm sure it's not a legit DX station, I start my CW CQ-caller running, turn my sharp filter on, and look for a QSO - as long as it may take. Usually get a contact pretty fast, and seldom find the bootlegger on frequency by the time the CW contact is over. Just one more reason to keep CW around. HI HI 73, AK

Thanks Dick,

I really appreciate the reply. I was just curious. It just happened to come to mind and when I gave it some serious thought, I couldn't come up with even one instance.

>Why do you feel it necessary to recite your equipment list?
>

My apologies, Dick. I guess I just wanted to reinforce the fact that there's no "monkey business" going on between the mic and the antenna, so I traced it in my mind while I typed. That resulted in the list. Upon reading it now, I see that it appears silly. I didn't mean for it to seem that way, some of the items are shared with my ham gear...sorry. Thanks again.

<< Case in point. I wanted to build a ground mounted vertical. When I piped 100 watts through it, my neighbor could hear my audio. I know it is not necessarily my fault, however, I went ahead and called the cable company to check it out. >>

My 5-watt packet transmissions were getting into Warner's CH 18 (dirty movie) channel, and being amplified up the line. I was getting blamed not only for that, but every outage problem the cable company had. I called Warner about their line's "leakage" and was told that the problem was my antenna was "leaking". I tried to explain that "leaking" is what antennae are for, but I couldn't get the message through. However, the FCC did get the message through and one Saturday - with five cable managers and one technician at my front door - the one tech worker took a couple of hours to fix the leaks. Meanwhile, I had a long discussion with the supervisors about why they had better stop blaming me every time their equipment failed. That fixed things short term, and the cable switchover to fiber seems to have taken care of things long term.

No big deal. Read Phil Kane's reply for much more definitive poop. As we used to say in my much younger days, when you hear it from Phil you are talking to the moose.

That would be willful and malicious interference. It's in Part 97, look it up. (and yes, you can't even interfere with an illegal station...crazy, eh?) The correct thing to do is tape the QSO, record the date, time, & frequency on the label and send same to uncle Riley.

Don't shoot the messenger. I don't make the rules, I just follow them. Good luck.

I would suggest that you look at the history of modern warfare before
you shoot your mouth off about the desires of the "professional
soldier). Try looking at how many civilians were killed at the
bombings in Germany. Try looking at the collateral damage from our
effective use of nuclear weapons in modern warfare. Were any
civilians killed in the bombing of Iraq? How about Bosnia? We never
killed civilians in Vietnam.

What happened to the soldiers in the Blackhawk was the result of
failed foreign policy and piss poor tactical planning. Cooking every
person within 700 yards would have made the outcome much different.

The option of cooking your enemies is another option available to the field commander. Plus, who says that is the only way that the technology can be deployed? Could a bigger one be put aboard a plane? Cook the people and keep the property.

Much better than a neutron bomb. Of course, the military never thought about that because they stay up all night worrying about hurting civilians....yeah right. Plus, do you really think that the only ones to use this technology will be the US military?

Are you that naive?

news:20010304185427.22882.00000471@ng-bd1.news.cs.com...

Bert, I am a tad concerned just what you are getting at so at the risk of chasing the wild goose I think a bit of history needs discussion.

There has been a lot of discussion on the CB newsgripe about why a sane FCC put a Citizens Band on 27 MHz where both E and F layer skip are common and then prohibited working it.
The short answer is that there was not a hell of a lot of choice.

Business band channels were scarce owing to the idea that the Modulation Index, the deviation divided by the maximum modulating frequency had to be at least five. This is why FM is 75 kHz deviation in a 200 kHz channel. So for voice 15 kHz was considered standard which produced 50 and 60 kHz channel spacing. This is why CB is AM by the way. If you have ever seen a 'coffin box' Motorola you know that the equipment of the vintage was large, heavy, and expensive. Another reason is that frequency tolerance after a 12 MHz crystal, about the highest primary freq available, is multiplied at least 12 times for VHF and 36 for UHF was stinko by modern standards.

To get some relief to the business people, several steps were taken including splitting commercial channels to 25-30 kHz (in in the process putting enough equipment on the market to start the 2 meter repeater caper) and starting CB as a low-cost shared business band. So there was method to the madness and to its credit, we had at the time an FCC more interested in fostering communication than preventing it -- the norm in a lot of countries. Now in a lot of ways the execution resembled the class project of a lot of summer interns. To this day, I have trouble believing the call sign fiasco when CB began.

The state of the art was such that the UHF Class A CB was not reachable for many people. You have to remember that the cascode 6BQ7 dual triode was the front-end tube at the time. It had only been 10-15 years since the tuner of a 1949 TV set would have been top secret. Judge ye not by 21st Century standards.

Early TV sets had their video intermediate frequency at 25.75 (now 45.75) so operation at that frequency took cast iron cajones. Hence the 5 watt power limit.

It was a noble experiment which time has passed by. It almost worked.
The current FCC approach of denial in general and denial of paternity in particular is not heartening but they have nothing to apologize for in the history.

Transistors, of course, made it a natural mobile. Then comes the fuel crisis and C.W. McCall (my sister went to school with him) and Convoy and all hell breaks loose. If we start to see the threatened 36 volt, actually 42 volt, systems from the car folks, the FET module will make the building of line-e-ars trivial although perhaps cleaner.

There are a number of sub-groups in CB and sorting out how to best serve them is a monumental bitch; there are some you couldn't serve with anything smaller than 9mm. The cry for separate trucking freqs has been around since the 70s and the conventional wisdom (don't ask me to prove it) is that the 220-221 assignment was for UPS to do just that. They have not ever used it that I know of. I have long advocated giving them a band which I will cover here if anyone gives a damn. I suspect getting them into a specially-designed FM band right below CB would make a major dent in 10 meter encroachment. That awaits another missive.

You seem to be of the hobbyist group and that's fine. Shooting skip is a fairly common passtime among VHF dispatchers when the tropo is in so welcome to the human race. Some foreign countries do not make getting an Amateur ticket nearly so attractive as the US does so there is a lot of skip to shoot among people who have chosen to do so outside the law. No sermons here.

But it appears you want this practice legalized or decriminalized and here is where you enter the jungle. It is effectively decriminalized now so doing it in the manner the Dutch handle pot would not be a major step. Stay off AM and I sure as hell wouldn't bother you.

One of the ways you handle regulatory organizations is to do their work for them but at the very least don't ask them to fall on their swords for you. Legalization of skip shooting has two problems (at least):

1. It is hardly in the spirit of Land Mobile operation and that is what CB is. It is for plumbers and garbage trucks, not hobbyists, at least from the ITU perspective.

2. The world already has a hobby service, Amateur Radio. Selling another one is like selling a second navel, one is decorative but two is a bit redundant.

Given the history of the use of radio in military or political affairs, it would not be too surprising if the US was getting a bit of international heat over everything from smuggling, drug running, financing of terrorists etc. in this range of frequencies while hiding under calls to San Glockenspiel.

I am afraid, Bert, that selling any idea to legalize skip shooting will be one hard sell.

>Nope. I'm just pointing out that the auto transmission analogy isn't perfect.
>Choice of transmission doesn't have much effect on other drivers. Choice of
>mode does.

Then do your pitch for using one mode over another as a "sales"
effort. It shouldn't require a test element to get those new
converts.

>>which
>>is not the purpose of the requirement.
>
>The test requirements have a variety of purposes. They vary over time, too.
>What those purposes should be has long been a subject of debate.

Tests should only have requirements which can
rationally be defended. The code test no longer
meets that standard.

>> If someone sends
>>poor code does that have a BIG effect on other hams...or
>>only an effect on the other person trying to copy code.
>
>Sending isn't tested today....

Bingo! So why does how well someone can copy
code have anything to do with having a big effect
on other hams?

>>If you want to hype the narrowbandwidth value of morse
>>over voice, that's fine,
>
>It's not "hype" - it's fact.

Hype, advertise, spin, whatever...it is all about
convincing others to use the mode. If it is so
efficient, then why are some people worried that
it will cease to be used if there is no test requirement?

>> but the FCC sure hasn't bought
>>that argument as a justification for code testing.
>
>Agreed. They are into minimum requirements now.

Which is ALL they should be.

Thanks, I didn't think so myself having passed that general
test as a teenager (1958-9) with a good memory.
Didn't know why things
were what they were, but had no problem memorizing
enough to pass.

>I specifically chose 1971 because that was about the "high water mark" for test
>requirements vs. privileges granted. In 1971, the Novice had no voice

>the same written as General. The privileges of a General or Conditional were at
>their lowest point compared to the full privileges available to a US ham.

So you are validating the dis-satisfaction that generals
of the 60s had when they lost privaleges. You note
that they (the pre-incentive generals) took a tougher
test than Extras do now.

>There was still a 2 year waiting period to even take the Extra test. For a
>General or higher, you had to go to an FCC exam point unless you were way out
>in the boonies or physically disabled (and the area that qualified as "way out

>
>No Bash books, no CSCEs, no VECs or test sessions at hamfests, all test
>questions were secret and you had to wait 30 days minimum to retest. Because of
>all the effort one had to expend just to get to a test session, most hams back
>then tended to overprepare for the exams.

ARRL license manuals, AMECO study guides, and others
gave the same info, often with "sample" test questions that
amazingly were indeed on the test in sometimes, exact
format.

>Since about the mid '70s, the trend has all been toward making the licenses
>easier to get. In many ways, I think that's a good thing. For example, being
>able to take exams at a hamfest on a weekend sure beats having to travel long
>distances to an FCC office to take the same exam on a weekday.

Absolutely agree.

>The FCC's ideas on ham license requirements have wandered all over the map in
>the past 50 years. Before 1953, the license requirements for full privileges
>(Class A) were very tough, particularly the writtens. In 1953, Generals,
>Conditionals and above got all privileges in a surprise move by the FCC. But
>after a few years, the FCC rethought its decision and the whole process that
>led up to the 1968 "incentive licensing" changes came to be.

What the FCC failed to see (IMHO) in their perspective was
the ever increasing knowledge base that a person needed
to be viewed by industry as technically competent.

>The FCC thought as early as 1958 that the requirements for full privileges
>(General/Conditional) were way too easy. And they were primarily concerned with
>the written test requirements, not the code tests. The code test stuff came
>later - and it was not the ARRL's idea.

Except for 20 wpm, what changed on code tests? Indeed, the
FCC added the Advanced which only required a written test
to upgrade to. For years the majority of generals didn't bother.

>The period of "Generals get it all" was actually quite short - 15 years and 9
>months. It was the exception, not the rule. The people who were running the
>FCC back then are almost certainly all gone now. The philosophy has come almost
>full circle.
>
>Ask Phil Kane - he was there.
>
>Make no mistake - the FCC is quite clearly acting to reduce illegal operation
>by making legal operation easier.

Again, that has never been stated anywhere. That is
only your own perspective. We obvioulsy disagree.

>The basic question is this: Why operate cb illegally? Why "freeband" when ham
>radio offers so much more? As I see it, there are only three explanations:
>
>1) To do things that ham radio does not allow legally. Examples are commercial

Yes you can, and should, interfere with an illegal station and as far as the FCC is concerned you are not breaking any rules by interfering with these cb morons as they are not licensed. The FCC isn't going to do anything to a ham station that interferes with these illegal bootleggers, so jam them all you want.

Dwight:

Using minimal force to physically restrain a person to prevent them
from committing a crime is permitted under the powers of citizen's
arrest. An ordinary citizen can also use deadly force to protect his
own life or the life of a third party -- but he would have to deal with the
natural consequences of a legal system which would closely examine
the situation in the aftermath. However, the kind of "restraint" I'm
talking about in your mother's case is the hiding-her-keys variety.

If your mother's poor driving truly presents a clear and present danger
to herself and others, you should be able to have something done about
it. At the very least, if I were you, I would not ride with her -- ever -- and

discourage others from doing so.

>Does any body know if the 155 mi rule has ever been enforced and what the >"realistic" penalty is?

Good Buddie:

I am not aware of the 155 mi. rule (I always thought it was 150 miles) ever being enforced. The original reason for the rule was to make sure that the Citizen's Radio Service fell within the confines of the "land mobile" definition, and to discourage "hobbyist" use of the service for routine DX chatting. CB was originally intended for short-range dispatching of small businesses (trucks at shipping terminals, mainly) and the communications were intended to be "strictly business-like." Personal (non-business) use was also allowed, as long as the transmissions remained short, to the point, fully identified, and within the rules in every respect. From the first time a trucker in Waco, Texas "worked" a colleague in Cleveland, this has to be one of the most universally ignored regulations ever placed into public law. Add to that the fact that it was dead-easy to add a "foot warmer" to a barefoot CB rig, and the ready available of high-gain antenna designs, DX on CB was was a natural outcome. I would be astonished to find out that it had ever been enforced.

That's why I recommend that anyone interested look up the archived
material himself so no one can be accused of cutting and pasting.

> > Yawn.

Maybe you need more sleep, Len.

I don't care if the model hobbiest organization is active or not. I was
not referring to it.

> I used to know a medical doctor who liked model aircraft building
> and flying. He used to joke about being a member of two AMAs.
> He had a sense of humor. You should try it sometime, you

I should join two AMAs? I'll pass.

> >I know what the ARRL by-laws state, Len. I also know what YOU stated.
> >My disagreement is not with the League but with you.
>
> That disagreement is quite evident. Few care about that.

How do you know about who cares and how much? You tried to shift my
disagreement with what you posted into a disagreement between me and the
League's by-laws. It was never that.

> You keep arguing about "what I (supposedly) wrote" but you don't

Anyone who cares to see what you actually said can check Google.
Otherwise, you'd accuse me of doing a cut and paste job on it to make it
look like something other than what you'd actually said.

> You haven't really presented any case yet except some personal
> opinions which have been distortions and untruths.

I'm not obsessed, Len. There have been no distortions and untruths.
Anyone can look up the statements you made--the most recent and the past
League bashing.

> If you wish to create a long and boring thread in the form of a
> kangaroo court where you want to be judge, jury, and executioner,
> feel free. That wastes everyone's time and is boring. Hardly
> anyone cares for any outcome of a personal vendetta.

No one who isn't interested in this need review any archives. That way, no one gets bored or has his time wasted. The "vendetta" outcome is sort of like oral sex, Len. It depends one whether you're kicking off or receiving.

> >Time for you to go easy on accusations of untruth unless you are sure
> >that your record on the matter is clean.
>
> Quit stowing your throne in a glass house.

That line wasn't really funny when I heard it in '66 or thereabout.

> You are now implying badness in the past...based on nothing but
> some vague statements of your (very biased) opinion.

Badness? Have you been bad again, Len? It's funny that my opinion is biased but you don't see your own opinions as biased. Don't you find that peculiar?

> >While that's not exactly what you've written, you have made numerous
> >negative comments about the League.
>
> Yes. I've also made some positive comments. The ARRL is not
> divine, it's policies are made by men not gods.

Sort of like those FCC folks you keep bringing up...

> >I've never said that you wrote that

> >to become a League member because you would not have a vote in League
> >affairs.
>
> Put it away, Dave. You are getting tiresome. Unlicensed members
> of the ARRL do not have voting privileges. That was what I've
> written. I've never written "why I will not join the ARRL."

If this has been painful for you, Len, and you're getting tired, don't bother to respond. I think most folks here knew that unlicensed ARRL members can't vote. It was only you who seemed to think this unfair.

> You state I've written something. You have no evidence to present
> in this kangaroo court of yours and yet you "challenge" me to
> refute something. No one can refute something that doesn't exist.

No one can refute something which exists and can't be taken back because it is archived either.

> >Izzat right? I think I understand you pretty well, Len. You're
> >currently not doing a very good job of negating your prior statements.
> >I've not attributed anything to you which you didn't state here.
>

> anyone of "wrongdoing" without valid evidence. If you have evidence,
> show it. If not, shut the hell up and go look for others who can be
> pushed around by your Dill Instructor attitudes.

Wrongdoing? Did you do wrong or did you just espouse an opinion which almost nobody would support? Is poor Len getting picked on in the manner he picks on others? Aside from a couple of concessions by you that the ARRL does some good, you've blasted the League on numerous occasions. Folks might need to include the AveryFine, NoCWtest, LenOf21 as well as LenOver21 screen names to come up with the complete works of Leonard H. Anderson in various archives.

> Remember, you are an example of the "highest" class license in
> US amateur radio.

This isn't the ham bands. As you are fond of pointing out, this is usenet. You are a representative of no license class in U.S. amateur radio.

Like hell I was! I EAGERLY took the tests and met the requiremtents!
You sound like a real mental deficient with all this nonsense. No one in
history has ever been forced by any circumstance to get a ham radio
license. Your entire argument is idiotic and everyone except you knows
it.

Thanks Dick,

No need to be concerned, there's no "sale" going on here. As far as AM goes, I haven't transmitted on AM since...ummm, about 1986 or so to ask for traffic conditions on ch. 10. So there'll be no "wild goose" to chase here, it was just plain old curiosity. After twenty plus years, I don't particularly need to see such a rule/reg. "decriminalized." It was humourous back then and, after all these years, it's just...well, old and tired. (kinda like me:-))That's why I added the "disclaimer" to my original post, to avoid any inaccurate speculation. Thanks again, the info was truly interesting.

In return for granting amateur radio privileges, the federal government
requires every amateur radio operator to met the requirements for an amateur
radio license. That's what governments do, Dick. That you enjoyed being
required to meet the requirements is irrelevant. You were still required
by circumstances to meet the requirements. If you obtained your amateur
radio license without meeting the requirements, you are a criminal.

The early IF was 21.25 MHz, before there was a 15-meter band.
When the latter came into use, the TV manufacturers moved the
IF to 45 MHz. For a long time there was a horrendous TV
interference problem because the older sets had direct pickup
in the IF strips.

It certainly was (and still is) enforced. I had plenty of
"seat time" doing "skip sweeps" and the paperwork thereof.

It originally was 150 miles, but when the FCC's distance limits
went metric, it went to 250 KM, which rounded is 155 miles.

>I would be astonished to find out that it had ever been enforced.

It certainly was. I even nailed one guy working Italy from
California when the band had a brief opening in the 1980s. The
usual "hop" was Californa to the Mississippi Valley.

WRONRO, Bozo. The FCC has clearly stated that an illegal signal, that
has no statutory right to use a frequency cannot be interfered with by a
legal station.
Of course the universal prohibitation against interfering with
emergency communications applies, since anyone transmitting due to a
bona fide emergency is not then illegal.

I'm not sure there is another end.

>It is not important to know power levels -- only that, for use as a
>weapon, they would swap anything for speed. A wider beam will require
>more power to get the same depth of damage in the same time frame.
>Thus, the beam is narrow to get more depth (and speed) from the same
>power.

?? I think you missed the point of the weapon. It is for crowd
control, so the whole idea is to cause people pain without doing
damage to them. This makes the shallow penetration depth a feature,
since all the nerves are located near the surface of the skin. If
you want to cause people more pain you actually want the beam to be
bigger, with the power density constant, so that you heat more skin
and more nerves.

This is a bit beside the point, however, since they give the specifications
in the article (increase skin temperature to a depth of 1/64" to 130
degrees F in under 3 seconds) and all you really do by varying the width of
the beam is to vary the power density. So what power density is required
to achieve that effect, and how wide a beam having that power density
can you generate with a power supply that is carried in a truck?

>Unless, of course, you plan to require the targets to stand absolutely
>still for 9 seconds, just so you can double the beamwidth and get the
>same results . . .

If you double the beamwidth while keeping total power constant you'll reduce the power density be 4 and it will take 4 times as long to get the same effect (I think this question might be on the Technician exam), so let's figure out the power density required to do it in the time they specify. If skin has the same specific heat as water then to raise a 1/64" thick chunk of it by 30 Celsius in 2.5 seconds should require about 2 W/cm^2, or 20 kW/m^2, assuming 100% of the RF is absorbed. I've seen pictures of mobile CB linear amplifiers which produce enough output to support a beam 2 meters in diameter at this power density, so I assume the military might be able to do at least this well too. To fit this power supply in a truck assumes that masers have gotten a lot more efficient then they were 20 years ago, but lasers have gotten a lot better since then so I assume masers could have as well.

A 2 meter diameter beam just doesn't seem all that hard to aim from the comfort of an armored vehicle. Are you sure there is a problem?

Dennis Ferguson

I clearly remember that it was reported in the ham press a few years ago that the FCC said, in response to a specific inquiry, that it was not possible to interfere with a communication that was illegal.
I also remember that the District Director for the San Diego district was reported to have said that it was illigal for amateurs to operat outside the ham bands under any circumstances, even in an emergency.
This statement seems clearly contrary to FCC regulatons. So it seems clear that the right hand doesn't always know what the left is up to within the commission.

"Richard McCollum" <rmccoll@radiks.net> wrote:
>There has been a lot of discussion on the CB newsgripe about why a sane
>FCC put a Citizens Band on 27 MHz...

From September 1958 QST:

Excerpts from FCC comments for removal of the 11 meter amateur band:

Reallocation of frequencies in the range 26.96-27.23 Mc.
The Notice of Proposed Rule Making in this proceeding recognized a need for additional spectrum space for personal use by any individual, especially those persons now holding authorizations for Class A stations in the Citizens Radio Service who will not be able to establish eligibility in any of the Industrial or Land Transportation Radio Services, as well as a substantial need for additional frequencies in the 28 Mc. range for use in the remote control of such objects or devices as model aircraft. Accordingly, it was proposed to reallocate frequencies in the band 26.96-27.23 Mc. from the Amateur Radio Service to the Citizens Radio Service for use by Class A stations for general purposes and, in addition, provide certain other frequencies, to Class C stations exclusively for the purpose of remote control. The Commission stated that this reallocation appeared appropriate because the frequencies in this band are a part of a larger frequency band within which interference may normally be expected and must be accepted from industrial, scientific and medical (1SM) devices and because, as a result of the foregoing, only limited use of this band has been made by the amateurs. In addition, it was pointed out that amateurs, as individuals, would be able to obtain licenses in the Citizens Radio Service for either radio control or voice communication in this band.
In connection with this proposal, the Commission received a very large number of comments from both individual amateurs and modelers, as well as clubs and organizations representing persons active in each of these hobbies. In general, it may be said that all but a few comments from modelers enthusiastically supported the proposal and most of those from persons who are both amateurs and modelers also supported the reallocation. Most of the comments from other amateurs were in complete opposition to any use by the Citizens Radio Service of frequencies in this band. However, a substantial number suggested that the band be shared by the Amateur and Citizens Radio Services. A few amateurs suggested that other amateur frequencies be substituted in lieu of those proposed, or concurred in tile proposed reallocation.

Typical of the reasons set forth by the amateurs opposing deletion of the availability of frequencies in the 26.96-27.23 Mc. range to the

Amateur Radio Service are:

(a) The adoption of the Commission a proposal would constitute a violation of the Atlantic City Radio Regulations to which tile United States is a signatory nation.
This band is the only one in the lower frequency ranges open to the amateurs where the Commission permits certain types of emissions and operations, and accordingly where the amateurs may engage in experimentation in facsimile, continuous carrier, and duplex operations.
(b) The characteristic which make these frequencies particularly good for long range and international communications will cause too much interference from skip, and prevent the widespread use of this band for short range communications and remote control.
(c) The recent non-use of this band by amateurs is due to cyclical "sun spots".
(d) Other amateur bands are overcrowded, the service is expanding at a rapid rate, and the 26.96-27.23 Mc. band is the only area left for expansion.
(e) The fact that an amateur might obtain a Citizens Radio Service authorization is not an adequate substitute because some amateurs could not meet the age requirement of that service, and in addition, amateurs would not be permitted to make their own adjustments to a citizens radio station.

On tile other hand, the modelers point out their dire and immediate need for additional frequencies, stating that the situation has been aggravated by recent authorizations of high-powered stations in other radio services on the frequency 27.255 Mc. for such purposes as traffic controls and remote radio paging. They further state that the use of frequencies in the 26.96-27.23 Mc. band for control of models is feasible and is similar to allocation practices found practical by other governments. The Commission is well aware of the history of the Amateur Radio Service in the development of the radio art and in providing a springboard of interest for future engineers and scientists. However, it must also be remembered that the remote control of models fosters a similar interest in young people and is a hobby in which young people are able to participate. The Commission is aware of the Amateurs outstanding record of assistance in local and national disasters. The Commission also recognizes that the Amateur Radio Service is a rapidly expanding service, but then, so is tile number of persons engaged in the remote control of models expanding at an ever increasing rate. While both amateurs and modelers suggest that spot frequencies located in different portions of the spectrum might be more desirable for remote control, such allocations are simply not possible at this time with the present scarcity of spectrum space.
In addition to filling the need for additional frequencies for remote control purposes, the proposed reallocation would also fill all urgent need for additional frequencies for voice communications by persons who will be unable to establish their eligibility in any of the Land Transportation or Industrial Radio Services, Although the Commission

may have originally underestimated the use of the 26.96-27.23 Mc. band by amateurs, the use of that band is still considerably less than in other bands available to the amateurs, a fact which is admitted by many amateurs and established by monitoring observations of tile Commission. As to whether the proposed reallocation would be in violation of the Atlantic City Radio Regulations, the Commission considers that no violation is involved. The primary world-wide allocation (if that frequency band is to the Fixed and Mobile Services and the footnote permitting its use by amateurs is merely permissive. Therefore, the reallocation ordered herein and in the companion proceeding in Docket No. 11959 from the Amateur Radio Service to the Citizens Radio Service is not in violation of the Regulations.
.As stated above, the 26.96-27.23 Mr. band is a part of a larger band in which interference may normally be expected from ISM devices. Most of the reasons presented in opposition to the proposed reallocation of that band to the, Citizens Radio Service were based upon potential use of this band in tile future by the Amateur Radio Service instead of actual need or existing use of the band. Monitoring records indicate that this band is not heavily used by the Amateur Radio Service, due obviously to the interference hazard presented by the operation of ISM devices on 27.12 Ale.
The Commission feels that substantially greater use can be made of this band by the Citizens Radio Service and that the loss to the Amateur Radio Service is negligible. While it is true that certain operations have been possible in this band which were not permitted on lower frequencies available to the Amateur Radio Service, such operations are still possible on frequencies above 51 Mc. and frequencies in those ranges appear to be coming into even greater usage by the amateurs than the band here under consideration. Although the Commission realizes that, in many cases an authorization in the Citizens Radio Service may not be an adequate substitute for the Privileges lost in this band; nevertheless, the Commission finds that public interest, convenience and necessity requires the reallocation of the 26.96-27.23 Mc. band to the Citizens Radio Service for the purposes proposed. The recommendation that this band be shared by the two services involved is not adopted, since that action would be inconsistent with the Commission's position in international affairs regarding the shared use of amateur bands.

You bet. Any individual is automatically "licensed" to use any and all
means of communication on any frequency in a life-and-death emergency,
goes far beyond just ham radio. There's an equivalent provision in the
aviation regs.

Well, thats nice rhetoric, Mr. Professional Soldier, but that nonsense is not fooling me. I'm fully aware of the military training scenarios featuring American citizens as the target (so-called terrorist groups - often conservative right-wing groups defined as "terrorist" groups). As any truthful professional soldier will tell you, this type of training has become commonplace within the military over the last few years.

And this mission (control of "terrorist" groups in the US) is certainly one of the primary factors driving the development of "crowd control" weapons in the military.

As for the "non-lethal" nonsense, let me remind you that just about everytime the military has been used for "law enforcement," the situation has become lethal.

Now you want to hand soldiers (and eventually police departments) a weapon touted as "non-lethal" if used correctly, when those very soldiers have shown that they cannot be trusted to use a gun correctly in those situations (remember, thats why the military does not give bullets to soldiers on guard duty).

Somehow, your claim that this is "non-lethal" technology does not really comfort me that much.

> If my men are under fire by civilians,

> not withstanding.

Ah, judging from the first paragraph directly above, I see you're also aware of the military training scenarios featuring so-called "terrorist" groups as the target (or at least aware of the mentality behind that training).

Anyway, the two paragraphs above don't add up when taken together. If "your men" are under fire, are you going to sit around waiting for this V-MADS weapon to be deployed? Of course not. You're going to shoot first and let God sort out the dead afterwards. So obviously, protection of civilians is not the real impetus for this new technology like you claimed in the second paragraph. Instead, this technology is obviously designed to control non-violent crowds (crowds that pose no lethal threat to your soldiers).

> And before you shoot your socialist

> book "Black Hawk Down".

V-MADS technology would not have made any difference in Somalia, my friend. Thanks to the overly aggressive tactics used, our soldiers succeeded in turning the entire population of that country against us in just a matter of days (even groups that initially supported our involvement). V-MADS technology would not have changed that at all.

Even that specific incident (the crowd dragging the soldier) would not have changed with V-MADS technology. Since that incident was totally unexpected, V-MADS technology would not have been immediately available to use. By the time it would have reached the location, the incident would have been over.

> People like you would prefer my

> the enemy really nicely "oh would
> you please not hurt us?". While
> they cut our throats and spit on,

> and burn the American flag for
> the anti western crowds that have
> not so friendly intentions for
> the U.S.

Don't give me that "comrades in arms" fighting the enemy nonsense, because it just doesn't fly. This technology, as advertised, is not about fighting the enemy . This weapon is being advertised as a crowd control tool. And, as far as I know, the military has not yet defined non-violent crowds as the enemy (yes, since you've already said you would use conventional weapons against violent crowds that threatened your soldiers, we are talking about non-violent crowds).

And, if you're fighting an enemy, you're not going to use weapons like this in a non-lethal manner. If this type of weapon is used at all, it will be used to kill the enemy. As such, it becomes nothing more than another weapon to kill with (so drop the high moral facade, my friend).

And, finally, I strongly object to your attempts to paint me as anti-American or anti-military. Throughout this entire discussion, my comments have been solely directed at the use of this technology as a crowd control tool. Not once have I commented on the use of this technology against a real enemy in a warfare situation.

Furthermore, I don't see how one can be painted as anti-American because of opposition to a weapon anyway. The United States has huge chemical weapons stockpiles. Is it anti-American to be opposed to chemical weapons? What about biological weapons (we have a stockpile of those also)? What other weapon must I not object to if I want to avoid being called anti-American?

I agree, Larry. I don't ride with her (as you will note, I said the described ride was rare - somewhat necessary at the time).

Actually, I have told her on many occasions that I think her driving sucks, that she needs to slow down, and that she needs to pay much more attention to the road. And I'm not the only one - my grandmother flat refuses to ride with her (and my grandmother is dependant on others for transportation since she no longer drives). So does the rest of the family (it only takes one ride with her to learn not to do that again).

But, I doubt I could do much more than what I have already done. We are not exactly close (I see her about once a month - she spends a lot of time out of town, as do I), so there is no way to watch her everyday. And she is determined to drive.

Anyway, enough of this. I understand your feelings (I share those same feelings about bad drivers - more so in this case because I'm directly involved with this one). Take care.

Agreed. In fact, they let the cat out of the bag with the press release (its based on RF). Since we're talking about radio here, it should not be that difficult to figure out - almost anybody familiar with radio could come up with the frequency used with little experimenting and the equipment should certainly not be that difficult to build. Somehow, I suspect we're seeing the beginnings of a whole new arms race.

Not wishing to beat a dead horse, wasn't 21.25 the audio? The separation is the familiar 4.5 MHz and the NTSC (Not the same color???) signal is inverted by the tuner. I'm not even sure that they didn't use separate i.f. strips in the real early days. Had to be some explanation for all the tubes in a DuMont.

Some of those early sets could detect someone using his Zippo from six city blocks.

Legal or otherwise, how much good can come of doing Blah, Blah, Blooie on AM at 28.085? My interpretation is that we no not need to respect the pirate for purposes of malicious interference but this does not mean rules are suspended.

Besides, all it really accomplishes is that Channel 19 two up sounds like Channel 19 zero up. The dumb bastard hasn't a clue anyway. Time to revive wide-shift RTTY; catch the BBC at 12.090 to see what that does to listening pleasure.

>That would be willful and malicious interference.

No, it's not.

"Malicious interference" only occurs when one station willfully disrupts
the communicaitons of an otherwise lawfully oerating station, een if it's not
in the Amatuer Service. An example are the point-to-point RTTY stations
operating at 30meters.

The only other exception is when the communications are of a bonafide
emergency nature. In that case any person may use any mode, band, or method of
signalling in order to summon assistance.

And I won't shoot.

> and more nerves.

If you don't provide sufficient signal density, your weapon isn't a
weapon. Essentially, this thing is a point-and-shoot microwave oven.

There are a number of things which can prevent it from working as
intended, and the only solution is to boost the effective power. That
can be done by more watts or more antenna gain. Watts are expensive.
You already need an antenna system, so making this more effective is the
reasonable solution.

> This is a bit beside the point, however, since they give the specifications

Theoretical power is beside the point. There are several lines on the
graph, including duty cycle and reliability.

Beamwidth is on the "cube-square" rule. What takes 3 seconds at one
width will take the cube of 3 seconds (9 seconds) for the same power
distribution on a bean double the width but the same power.

>
>So you are validating the dis-satisfaction that generals
>of the 60s had when they lost privaleges.

All of the Generals and Advanceds that I knew who were ticked off by the loss of privileges thought they had "earned the right" to all privileges, and did not want to have to take another test to retain them. The FCC disagreed.

>You note
>that they (the pre-incentive generals) took a tougher

In my opinion, the old General test required morebasic radio knowledge than
today's Extra does. Just my opinion. But ham radio, radio technology in
general, and the test process were VERY different back then.
>

>amazingly were indeed on the test in sometimes, exact
>format.

But you did not KNOW ahead of time that the questions and answers would be so
similar. Today, a prospective ham knows that the exact Q&A in the study guide
will be on the test.

The ARRL LM study guides were just reprints of the official FCC study guides. I
always thought it was odd that the study guides were in essay format while the
actual tests were multiple choice. The reason is now obvious: it added the step
of translation to the testing process.
>

>
>Absolutely agree.

One can even imagine that the old difficulty of access could be challenged in
court. After all, the amateur license is not a commercial license, and the FCC
had a long history of mail order license testing. A prospective ham who lived
174 miles "air line" from the nearest FCC quarterly exam point might have to
travel a lot more than 174 actual miles to get there. For school kids like me,
getting out of school for an FCC exam was out of the question, so the
opportunities to take the test were severly limited - only sessions in the
summer or Christmas break were possible, and Christmas sometimes fell on exam

day.
>

>to be viewed by industry as technically competent.

EXACTLY! Excellent point!!!

I think they DID see it in the early '60s, and that is what drove the
"incentive licensing" changes. But by the 1970s that idea began to be
abandoned.
>
>>The FCC thought as early as 1958 that the requirements for full privileges

>
>Except for 20 wpm, what changed on code tests?

FCC proposed demoting existing Advanceds to General, then creating the "Amateur
First Class" license to replace it. A "First" license would have required a 16
wpm code test and a new written. ARRL and others opposed it so vigorously that
the idea was eventually dropped.

> Indeed, the
>FCC added the Advanced which only required a written test
>to upgrade to.

They reactivated the Advanced - there were about 40,000 existing Advanceds in
1967. The original 1963 ARRL proposal (made in response to an FCC inquiry) was
simple: Reopen the Advanced and require either an Advanced or Extra for full
privs. Simple and NO new code test for anybody to retain full privileges. FCC
didn't go for it.

> For years the majority of generals didn't bother.

Unless you wanted to operate 'phone, there was no reason to. For serious CW,
you needed an Extra.

>
>Yet we finally see an actual increase and commitment
>of such resources for enforcement in the last 2
>years.

The big commitment of resources is in enforcement, not license testing. And that commitment came because of endless requests and complaints from the ARRL, other ham groups and individuals. The R&O changes created a short-term flurry of activity, but will result in long-term savings because the whole structure is simplified.

One interesting side effect is the number of Novices who have renewed since April 2000. Maybe their interest has been renewed, too.
>

>
The Tech with 5 wpm only gets you limited-power 10 meter SSB in the busiest part of the band, plus the Novice CW stuff. No 'phone or data anywhere else on HF/MF. If you don't want those limited privileges, you need at least a General. Pre-R&O General meant 3 written tests totalling 100 questions and 13 wpm code (or 5 wpm and a medical waiver). Now, a General requires just two writtens totalling 70 questions and 5 wpm code. You tell me which one is a bigger "investment" to get the same privileges.

The "price" of full privileges has been reduced even more. But remember, the FCC's idea of the appropriate requirements has wandered all over the map in the past.

The interesting thing is that pretty much anyone can build this thing --
and, if the government is claiming that it's NOT a dangerous weapon,
then if the intended victims "do unto others before they are done unto,"
there isn't a lot of room for the Feds to complain, is there?

Wouldn't you love to be in THAT courtroom?

ATTY: "Officer, you testified that the defendant was using a Scrooch
Gun on you. Yet we have heard testimony that the defendant had an
Amateur Radio license, and was transmitting at legal power and frequency
. . ."

The present argument is limited to the definition of the word "forced".
K7JEB put it wisely when he said, in effect, that governments force
citizens to obey laws and meet requirements. That's what governments do.

It might be if there were direct evidence to support it, or at least if there were not direct evidence to dispute it. Each of the changes the FCC has made to licensing requirements has been accompanied by explanations of the rationale behind the change. I'm not aware of anything the FCC has said in those documents that supports your idea. You've suggested that the FCC either didn't know that was why they were taking the actions they did or that they lied about it. Neither is "reasonable," particularly when you consider that the changes took place over a span of about 30 years, under the auspices of a number of different FCC commissioners and staff members. To accept your thesis requires accepting that all of those people have, for 30 years, been acting unconsciously, or that there has been a 30-year conspiracy to commit misfeasance. Unless someone can adduce credible evidence to support your thesis, I think it's just blather.

Jon

Oh, absolutely right, Dick. Certainly no one is authorized to break the rules just to 'punish' another rule breaker. I abhor the idea that we find that we should feel the need to "drive him off our band" but that's about what we're left with. No proper means of dealing with that sort of problem is in the offing.

Your statement has got to be in the running for the DAPOTYACAP (Dumb Assed Post Of The Year Award Certificate And Plaque)!

First, I've got better ways to spend my time than transmitted deliberate interference on top of some dump huck CBer.

Two, the dump huck CBer probably doesn't hear you anyhow.

Three, your interference masks the interlopers signal during DF efforts.

Four, deliberate interference is deliberate interference -- you're nothing more than another rules violator, no better than the dump huck CBer that you're jamming.

The direct evidence is the changes in licensing procedures for the past 30
years.

> Each of the changes the
>FCC has made to licensing requirements has been accompanied by
>explanations of the rationale behind the change.

Of course. As I have stated before, there are a number of reasons for each
change that has been made. For example, the change from FCC-run tests to VECs
wasn't just to save the FCC some money. It also made the test procedure much
more accessible to prospective hams.

> I'm not aware of
>anything the FCC has said in those documents that supports your idea.

Neither am I. But the pattern of changes is still there. Can you name any changes since 1971 that have made licenses harder to get?

>You've suggested that the FCC either didn't know that was why they were
>taking the actions they did or that they lied about it.

No, I did not say they lied. I don't think they lied, either. Not putting every possible reason for something in their report is not lying, in my book.

And government agencies, in general, use language that can support a variety of ideas and interpretations.

> Neither is
>"reasonable," particularly when you consider that the changes took place

>commit misfeasance.

I don't think they were conspiring or commiting misfeasance.

> Unless someone can adduce credible evidence to
>support your thesis, I think it's just blather.

Your opinion noted. Mine's different.

Consider this analogy:

Back in the '70s the Feds imposed a national speed limit of 55 mph. (As I understand it, they made compliance by the states "voluntary", but a state that didn't comply lost Federal highway funds in a big way). This change was reportedly done to save fuel and to encourage alternate means of transportation. It also was credited with reducing pollution and saving tens of thousands of lives.

Enforcing this limit was tough, because many people felt it was their "right" to go faster. "I can't drive 55" was a popular phrase....;-)

Once the fuel shortages of the '70s ended and the price of fuel stabilized, pressure to raise the speed limits increased. So did wholesale violations - in fact, one excuse used by many speeders was "If I go 55 I'll get rear-ended!!!"

Many drivers felt that the 55 mph rule was overly restrictive. Respect for speed limits of ALL types decreased among some drivers.

So a few years ago the rules were changed, and now we have higher speed limits on many roads. Did the regulatory agencies say "55 was a mistake" or "we know that nobody is obeying the speed limit on many roads, so we're changing the law"? I doubt it. Can we say that the wholesale violation of the 55 speed limit on many roads had no effect whatsoever on the regulatory agencies' decision? You tell me.

Wrong! the FCC doesn't consider it interference since the dump huck cb is illegal, so if I transmit on the same frequency I am not violating any rules.

Just because a change may have had a certain effect (which is arguable
in the first place) does not imply that the effect was intended. The law
of unintended consequences is called a "law" because unintended
consequences are common. Direct evidence of the FCC's motives cannot be
gleaned from the effects. It can only come from those who knew the
motives.

> Of course. As I have stated before, there are a number of reasons for each

But was the intent of the change to minimize illegal operation?

> > I'm not aware of
> >anything the FCC has said in those documents that supports your idea.
>
> Neither am I. But the pattern of changes is still there. Can you name any
> changes since 1971 that have made licenses harder to get?

Irrelevant. I don't question that fewer impediments to getting a license
exist than in 1971. I do question your assertion that the changes were
made in order to convert illegal operation to legal operation. But I'm
willing to believe it if the evidence is forthcoming.

> No, I did not say they lied. I don't think they lied, either. Not putting every
> possible reason for something in their report is not lying, in my book.

I don't want to quibble about definitions. Can we agree that your claim
is that the FCC either did not know (!) or did not tell a substantial
part of the truth about their reasons for taking the actions they did?

> And government agencies, in general, use language that can support a variety of
> ideas and interpretations.

No more so than rrap posters. :-) But if you know of language from the
FCC that can support the interpretation that they were making changes to
amateur licensing in order to reduce illegal operation, I'd be
interested to know of it.

> I don't think they were conspiring or commiting misfeasance.

Again, let's set the definitions aside. Do you think they have withheld substantive information about their intent?

> Consider this analogy:

Analogies are irrelevant. If you're going to claim that someone's -- or some agency's -- motives are different from what they state them to be, I think you have a moral obligation to support your accusation with something more substantial than analogies.

> So a few years ago the rules were changed, and now we have higher speed limits
> on many roads. Did the regulatory agencies say "55 was a mistake" or "we know

They did in Connecticut. The legislature said, in essence, that Nutmeggers had voted with their accelerator pedals so may as well acknowledge the fact and raise the limit.

Better yet, let a third party point it out, or more
realistically, the FCC observes it while in the process of
investigating the illegal operation, and guess who the
mousetrap springs on...two for one is not a bad deal.

Hey there Dick,

Once again, you seem to be the grand prize winner! You took an innocent question presented for no other reason other than curiosity and despite a request for civility, you found it necessary to interject with a sarcastic quip.

Dick, what could've possibly happenned in your life to make it impossible to respond to people in a nice manner. I've read a great deal of really informative information here, much of it presented by some that I don't necessarily agree with...but they posted with good intent. I've just about never see you agree with anybody unless they've joined you in attacking somebody else whose views differ from your own.

>Could it be that he is trying to make us believe it's what he actually
>uses?

Gee whiz Dick, I thought I answered this adequately when I responded to Richard. The issue is not about whether or not I wan't you to believe that this is actually my gear. It's about why you feel it necessary to question my honesty or attack my integrity. Didn't mum ever teach you that "If you don't have anything nice to say..." You know the rest, don't you?...don't you?! I'd understand if you were part of the "me" generation, but The Amazing Kreskin senses that this is not the case. Is it because I'm "just" an 11 meter op, would you fell better if I listed my call? I don't think so since you seem to attack everybody...even your contemporaries.

Anyway Dick, you take care now and I hope whatever is eating at you subsides. There's much fun to be had if the bag of anger is checked at the door. By the way Glenn Miller played, those that made the hit parraaaaade; Guys like us, wehad it made...those were the days. "Ya dun good, Edit!" 73.

Bert

P.S. Dis I mention the Bencher LPF. Oh, I forgot...you probably wouldn't believ that an 1 meter operator would use one of those. Take care, Dick.

Neither the word 'yes' nor the word 'no' are to be found anywhere in
there. Is your answer yes?

If my present argument is limited to a definition, then it is without
commentary as to merit. It is limited to quoting the dictionary.

So do you agree that the reason you might be meeting some of this resistance to the idea that the government forces people to take code tests is that you've argued in the past that the government _shouldn't_ force people to take code tests?

I'm just curious about that.

And a predictable consequence doesn't have to be stated to be involved
in the planning. It can be realized to be a likely beneficial
consequence and never be noted in the stated reasons for regulation
changes. I, too, believe that this has been the case.
If the FCC had the resources to fully deal with the illegals they would
do so. Since they don't it's easy to adopt regulations which can be
incentives for them to straighten up their act. Clearly easier access to
ham radio licenses does just that, with no notice necessary. Notice
would only be seen as a form of capitulation.

Dick

>WRONRO, Bozo.

And still champon!

>Sure you do. And the moon is made of green cheese.

Ouch! (I have violated that 250Km rule once or twice though;-p)

Dick, I've been informed that you're ret. LE. I come from a family of law enforcement, so I have a soft spot for cops...but you're my first exception. JUST KIDDING...I've actually been told that you're a good egg underneath it all. I don't necessarily agree, (yet) but I regard my source with high respect so I'll give you the benefit of the doubt.

I really do follow the rules. I won't lie and tell you it's always been that way, but it's been that way for over fifteen years now so I think the statute of limitations has passed. We all make mistakes...and then some of us grow up. I don't want to jeopardize my ticket so yes, I play by the rules. I may not agree with them all, but I follow them. Take it easy, Dick...& 73. (I mean that.)

In article <3AA3180D.29A34770@ovis.net>, Dave Heil <k8mn@ovis.net> writes:

>Yes, you made the statement. If you are now reversing yourself, that's
>fine with me. Your "distorting things again" comment bothers me. I
>haven't distorted things this time and I don't know which other occasion
>you refer to since you saw fit to add the "again" term.

You distort by accusation without evidence. You distort by taking
things out of context. You've done it again above.

>That's why I recommend that anyone interested look up the archived
>material himself so no one can be accused of cutting and pasting.

Fine by me. Are you now going to play another distortion
game by saying I "will accuse you in the future about
cutting and pasting?!?" Interesting paranoia there. :-)

>I don't care if the model hobbiest organization is active or not. I was
>not referring to it.

I was. And the spelling is "hobbyist." :-)

>How do you know about who cares and how much? You tried to shift my
>disagreement with what you posted into a disagreement between me and the
>League's by-laws. It was never that.

You were manufacturing a conflict. I was not in any argument with
ARRL by-laws.

>Anyone who cares to see what you actually said can check Google.
>Otherwise, you'd accuse me of doing a cut and paste job on it to make it
>look like something other than what you'd actually said.

Tsk, tsk. More accusatory "what I will do in the future" nonsense.

>I'm not obsessed, Len. There have been no distortions and untruths.
>Anyone can look up the statements you made--the most recent and the past
>League bashing.

I have spoken against the ARRL's policies and I've also praised
ARRL services. Your distortion is pulling out only those items
which suit your purpose.

>No one who isn't interested in this need review any archives. That way,
>no one gets bored or has his time wasted. The "vendetta" outcome is
>sort of like oral sex, Len. It depends one whether you're kicking off
>or receiving.

To me this is as far from sexuality subjects as it can get.
However, this newsgrouping stuff must be sexy as hell to
you... :-)

>> Yes. I've also made some positive comments. The ARRL is not
>> divine, it's policies are made by men not gods.
>
>Sort of like those FCC folks you keep bringing up...

The FCC regulates US amateur radio. The ARRL does not.

>If this has been painful for you, Len, and you're getting tired, don't
>bother to respond. I think most folks here knew that unlicensed ARRL
>members can't vote. It was only you who seemed to think this unfair.

I don't recall any "unfair" statement. Maybe you are "recalling
for me" or something like that?

Davie boy, this is NOT about ARRL membership voting
privileges. Your post is all about manufacturing some
dispute which did not happen...and you "need" some kind
of dispute to win your message points. Tsk, tsk.

>No one can refute something which exists and can't be taken back because
>it is archived either.

Bad sentence structure. I said "no one can refute something
which wasn't said." You can't archive something that doesn't
exist.

>Wrongdoing? Did you do wrong or did you just espouse an opinion which
>almost nobody would support?

What are you trying to say there? You've managed to construct
a sort of double loaded question in one sentence.

>Is poor Len getting picked on in the manner he picks on others?

Awww...did you feel "picked" on, big davie?

I think you've been taking lessons from Jim Kehler. Too bad you
aren't as sarcastic or ascerbic as he is... :-)

>Aside from a couple of concessions by you
>that the ARRL does some good, you've blasted the League on numerous
>occasions.

"Blasted?!?" I have disagreed with the ARRL's past policy
statements. Last time I checked, it was not against any
freedom or law to disagree with a Special Interest Group.

I have agreed with their recent policy on international code
testing...as far as it went. I thought they should go farther,
but, if I said that, you would make a Big Thing about
"blasting" the League. :-)

>> Remember, you are an example of the "highest" class license in
>> US amateur radio.
>
>This isn't the ham bands. As you are fond of pointing out, this is
>usenet. You are a representative of no license class in U.S. amateur
>radio.

I've not pointed out that this is "usenet." I've pointed out this is the Internet...and had a public argument on that with a two-mail-addressed, multiple-club-call individual who was once a regular. [see? you are screwing up quoting through mistakes]

Of course you are a "representative" of the "highest" class license in US amateur radio...on or off the radios. Whatever statement you make on amateur radio reflects off that shining set of dented armor you wear. :-)

Anyone interested in amateur radio but not yet licensed in that radio activity is a potential licensee. Is that wrong? If it is wrong, then point out why you should be an "elite" controller of the hobby and why you have the power to push others around.

Davie, you don't "own" amateur radio any more than another citizen. You can have 38 years or whatever "tenure" you claim but it doesn't make your word "more correct" than anyone else. If it makes you happy to wave your legal ham license and go "nyah nyah, I got one and you ain't," go ahead. I'm trying to address the subject of licensing requirements for any newcomer but you take that soooooo personal. Tsk, tsk. Get over it.

>on many roads. Did the regulatory agencies say "55 was a mistake" or "we know
>that nobody is obeying the speed limit on many roads, so we're changing the
>law"?

Actually, that was addressed in many respects with regard
to the various federal discussions that took place. The "mistake"
in the original legislation was a failure to have the 55 National
limit end automatically when the oil embargo ended.
In hindsight, the safety nazis got the better of everyone because
to oppose 55 after the embargo ended lead to being
labeled a speed freak, anti-safety, ad nauseum...

The other strong supporter of 55 was the insurance industry which
just loved giving higher rates to people being
ticked for driving over 55 on roads designed for 70+.

> I doubt it. Can we say that the wholesale violation of the 55 speed limit
>on many roads had no effect whatsoever on the regulatory agencies' decision?

The failure of your analogy is that there is NOT any
equivalent wholesale disregard for FCC rules by the vast
body of the populace. In contrast, even those that
said they wanted to keep 55 were usually in gross violation
of 55 when they drove on the highway.

Cheers,
Bill K2UNK
also a member of National Motorists Assoc. which played
a lead roll in ending the 55 mph farce.

I agree that ham radio and general radio technology
was very different then, but how much different was
the testing? General test was already multiple choice
(except for those "draw a diagram of..." questions).

.....
>>>No Bash books, no CSCEs, no VECs or test sessions at hamfests, all test
>>>questions were secret and you had to wait 30 days minimum to retest. Because

>>gave the same info, often with "sample" test questions that
>>amazingly were indeed on the test in sometimes, exact
>>format.
>
>But you did not KNOW ahead of time that the questions
>and answers would be so similar.

Sure we did. The testing on which those manuals was
based didn't change dramatically from month to month.
Did we know the exact questions? No, but clearly the
license manual publishers had a solid track record of
providing more than enough material in an abbreviated
form (the license manual) to enable people to use
the manual and pass the tests.

>Today, a prospective ham knows that the exact Q&A in the study guide
>will be on the test.

Yet the syllabus of those questions being used takes more
pages to print than any of the old license manuals did.

>The ARRL LM study guides were just reprints of the official FCC study guides. I
>always thought it was odd that the study guides were in essay format while the

If I memorized the fact that AMPS is the unit of electrical current,
the detractors (wrong answers) make little difference. Any good
test taker knows that.

<SNIP>

Possibly so, and the reason being (IMHO) is that the
knowledge level needed to be competent by industry
was still growing...as it is today. The ironic part is that
while the complexity has increased by many orders
of magnitude, the quality and reliability have also.

Likewise the cost of production has plummeted to a point
that we can buy mid-range size (19-27") color TVs with
remotes and stereo for under $300 and VCRs for
less than $100. That puts such consumer electronics
into the "dispossable" catagory. Assuming any
consumer electronic device doesn't fail during the
warranty period, odds are it'll last 10 or more years
(I had an old 13" Sony that went 20 years, we have a
19" color set that is over 10, VCRs, etc.) Few
peple will "risk" repair costs of $40 an hour on a
consumer product they can buy brand new for
under $300. That's especially true since technology
advances offer marked improvements in
products over every few years (e.g. TVs now have
composite video inputs, stereo output/input jacks,
etc.

Several years ago I read marketing article that
stated the price point for "impulse purchase" was

about $300. That is, if something costs 300 or
less, most consumers don't consider such a purchase
as requiring considerable thought, planning, or
justification...they just buy it.

>
>Don't need them. I'm not saying this idea will work! If most "freebanders" are
>motivated by 1) or 2), changing the licenses tests will have no effect on them
>because they WANT to be illegal.

Which the FCC should, by now, have a clear understanding of
since the no-code tech license has been available for 13 years
and even before that, coded techs had access to 10m phone.
If 5 wpm is soooo easy and the tech license written is soooo
easy, why hasn't there been any great drop in illegal CB
activity? You'd think the FCC or anyone else could make the

determination that most illegal CBers have no desire to
become "legal" via the ham radio route.

<SNIP>

>>Yet we finally see an actual increase and commitment
>>of such resources for enforcement in the last 2
>>years.
>
>The big commitment of resources is in enforcement, not license testing.

No resource commitment is needed in license testing. The
system appears to work quite well...or do you think
otherwise?

>And
>that commitment came because of endless requests and complaints from the ARRL,
>other ham groups and individuals.

I care not why or how it came about, I am simply happ
to see the enforcement.

>The R&O changes created a short-term flurry
>of activity, but will result in long-term savings because the whole structure
>is simplified.

Savings for who? On what basis?

>One interesting side effect is the number of Novices who have renewed since
>April 2000. Maybe their interest has been renewed, too.

The novice numbers, however, are dwindling rapidly.

>>>Think about that question, though. Why would anyone operate illegally when
>>>so much is available legally?
>>
>>The tech with 5 wpm has been around long enough to
>>counter that argument.
>>
>The Tech with 5 wpm only gets you limited-power 10 meter SSB in the busiest
>part of the band, plus the Novice CW stuff.

Yet that limited power is way above legal CB limits.
As to the "busiest" part of the band, so what, it still is
rarely wall-to-wall (28.3 to 28.5) filled with phone
signals.

>No 'phone or data anywhere else on
>HF/MF. If you don't want those limited privileges, you need at least a General.

But you were talking about those pirate and bootleg CBers
who operate 11m...are you now addressing some
unknown pirate operations in the lower HF segments?

>Pre-R&O General meant 3 written tests totalling 100 questions and 13 wpm code
>(or 5 wpm and a medical waiver). Now, a General requires just two writtens
>totalling 70 questions and 5 wpm code. You tell me which one is a bigger
>"investment" to get the same privileges.

If you wish to measure the "difficulty" or the need
to invest study time based on the number of
questions, then your method "appears" to suggest
the former. If you look at the total volume of
questions which can be asked, then I would suggest
the later may be. In the end it makes no
difference. On my trip to Extra I took and passed
6 tests (Novice, Tech/General, Advanced, Extra
and both 5 wpm and 13 wpm). I care not one iota
that others can do the same thing now via only
four tests, nor that some others took 8 tests to
do it.

>The "price" of full privileges has been reduced even more. But remember, the
>FCC's idea of the appropriate requirements has wandered all over the map in the
>past.

Because the purpose of that testing has changed to reflect
both ham radio in general and the global aspects
of radio theory and individual mode usage (i.e. the
role of CW in today's world).

Cheers,
Bill K2UNK

>Subject: Bootleg Operators on 10 Meters

No need to get upset about the bootleggers - just make 28.085 MHz the national CW rag chew and calling frequency. When the ssb stations move, move with them.

In my younger days as a HAM - when 11 meters was one of "my" bands - we thought it was bad when the FCC turned the frequencies over to CB. One of the plus factors turned out to be that most of the bootleggers back then switched over to CB, and the bootleg problem went to NIL. Just like "incentive licensing", things seem to have gone full circle.

The good news on 10M bootleggers is that find there is usually some ham monitoring soon after a phone station pops up deep in the 10M CW section. Once I'm sure it's not a legit DX station, I start my CW CQ-caller running, turn my sharp filter on, and look for a QSO - as long as it may take. Usually get a contact pretty fast, and seldom find the bootlegger on frequency by the time the CW contact is over. Just one more reason to keep CW around. HI HI 73, AK

"Pay-to-Pay" (e-file) is not the smart way.
If only IRS were really a "service" ! AK

When we asked the FCC for an amateur radio license, we weren't offered testing as an optional. The didn't ask us whether we'd like to take a test before they mailed the license to us. They gave us their terms, and it wasn't open to discussion. Given that it was our intent to obtain a license, and given that we are required by law to be qualified to have a license, the circumstances dictate that we must pass the appropriate examinations. That's all Cecil is saying guys. He's not saying the government forces us to be ham operators. We're not forced to pass exams ***UNLESS*** we want a ham license. Under THAT circumstance we have no option as to whether or not we must pass a test. It's a simple idea, and has virtually no implied significance.

>converts.

In case you hadn't noticed, Bill, the whole code test issue is a dead duck. The FCC is clearly come to the conclusion that the ONLY reason for a code test is to meet the requirements of S25.5. They eliminated all but the minimum test that they think meets that treaty provision. They can't do any more reduction until the treaty changes.

The ARRL BOD decided at their January meeting to simply step aside on the treaty issue. They're not going to push for keeping S25.5 - and neither will a whole bunch of other countries. The final wake-up call was the Region 3 ITU meeting last fall, where ALL of the other national societies in attendance voted to support elimination of S25.5.

Sure, the ARRL BOD sez they will support keeping a code test without S25.5. Do you really think the FCC will follow that recommendation for access to 'phone and digital modes? I don't.
>
>>>which

Is the distintion here between that of 'throwing' and unidentified carrier, and legally calling CQ or having a legitimate QSO? It seems to me that if there were an interference issue between two truckers having a conversation and two hams having a CW QSO on the same 10 meter frequency, the interference issue would be easily resolved - in favor of the hams. Is this not true?

Otherwise I agree with your point about malicious interference.

>on many roads had no effect whatsoever on the regulatory agencies' decision?

The speed limits on most of the major (non-freeway) city streets in Phoenix have been set for many years by the citizens. Traffic Engineering checks the speed of motorists on a particular street over a period of weeks and then sets the speed limit at or near the average speed...

Further the state (non-freeway) speed law 28-701A is not an absolute law. It says that you can go no faster than what is reasonable and prudent. This may be above or below the posted speed limit depending on the conditions (road-weather-traffic) at the time.

We gutted our freeway 55 mph speed limit law some years back. If you were going up to 15 mph over the limit you would be cited for misusing a natural resource, not speeding. The fine was very low and there were no points given to your drivers license. But we still got our highway funds...

We are just now getting some of our outlying city freeway limits raised to 65 mph. However the downtown areas are still 55 mph. I was coming through one of those downtown areas a few days ago and keeping pace with all the traffic around me. I was going 75 mph...

I was wrong! THIS is the DADHPOTYA (Dumb Assed Dump Huck Post of The Year Award) winner!

I kinda hope I hear you doing that, so I can personally send the tape to Hollingsworth.

73, Hans, K0HB

The FCC will tell you that it is impossible to interfere with unauthorized
transmissions. Call them up yourself and ask them.

How many times do I have to say this?

With regards to unauthorized signals, there is no such thing as deliberate interference. It is *impossible* to interfere with an unauthorized signal. These are the FCCs words not mine. Call up the FCC and they will tell you the same thing.

155. As Threatened

Newsgroup: rec.radio.amateur.policy

Several comments on this group of late got me thinking. Bad Mistake.

Larry notes that truck driving is more these days than bladder capacity. Jim N2EY notes that most of the interlopers he has heard are truckers (also true in the I-80 corridor where I live) at short distance from each other. Skip-shooting from fixed stations becomes an issue on several newsgripes -- which truckers could generally care less about. And I recall that there has been babble about a truckers' band virtually forever. Might it be that they are trying to get away from the rest of CB???

So perhaps it is time to give it to them and where else but below the present 40? It now being nearly 50 years since CB was invented and 30 since the Fuel Crisis and Double Nickels that started the whole cesspool, maybe we can do it right this time. The sense of isolation from driving a big rig is pretty good motivation for a lot of things and perhaps protecting their terrain is one of them. So you need to give them a fighting chance.

So here is my specs for you to shoot holes in.

20 Channels on some bizarre channel spacing. I used 12.9 kHz
FM with M1-M7 selectable but required PL. A 200 Hz buzz should keep interlopers down to a belch.
Five and 25 watt selectable.
Channel 1, M1 is a calling channel. M1 selected automatically on Channel 1.
Two timer circuits: ten-second transmit on channel 1 and a 5 minute reversion to Ch1 M1

The FM, PL, and odd spacing should allow some privacy. Having done about all that is possible technically, what can you do with regulation? It would be nice to limit sales to holders of Class A CDLs but this is really not practical. The band should be mobile only, no fixed stations of any kind including dispatchers, customers, nada. The whole idea is a truck-to-truck band, period.

As the area is basic garbage frequencies to begin with, certainly with the skip shooters, there is not a hell of a lot of risk in devoting some of it to the truckers. From an enforcement perspective, it is really the old police trick of establishing one saloon two blocks from the station to attract all the Noids to one bar. One hopes to accomplish two things: get the truckers off Channel 19 two up (28.085) or three up (28.535) and make it readily apparent that anyone on AM from about Channel 15 to 40 one down will be strangled.

I kind of like it.

OK Policy wonks, let me have it.

You'd heighten the height of the ridicuous? Have a legally licensed ham cited for QRMing an illigal Freebander who deliberately, brazenly and pugnaciously sets up shop inside a ham band?

How far can we go from the 'good old days' when FCC had teeth and most anyone who intentionally violated soon felt the bite? And when virtually all hams supported that?

A noble proposal, Dick. But---how long do you think it'd be till the
wandering jackals would chew it apart, like they have the rest of that
part of the spectrum.....just because "it was there" and they "could"?
They might not be able to hurt the close-in intertruck comms much..
but you an be sure that some illegal(under your proposal) base stations
would get into the act. Lots of truckers used to have base station
contacts accross the country they'd talk to regularly (I haven't had
exposure there for a LONG time, fortunately). I'm afraid a whole new set
of "violations" and violators would result.
What puzzles me is why the truckers would choose to land within a ham
band to do their thing. Don't they know that stirring up a lot of ill
will among hams is much more likely to get the Feds AND the hams down on
them than if they used some obscure unused frequency outside a ham band?

Dick

Hey, Phil, and Hans, I don't think this is the same FCC that Phil used
to work for and the rest of us used to know so well.

I agree the very concept of deliberate interference, regardless, seems
to be anathema. But that was then. This is now.

Source record: 4495

Hans,

Well, you might as well tape me, too. You see, Hollingsworth already addressed this issue in regards to the New York taxicabs that were operating on the low end of 10M. The local hams started running CW QSOs and CW practice right over the top of the illegals. Mr. H. made the comment that as long as the stations that are LICENSED to use a particular frequency do so within the terms of their license, then NO interference occurs as to the illegal stations. They have NO "rights" under these circumstances since they are not supposed to be there to begin with.

NOW. If one starts cussin' the truckers out on AM phone, playing music, or playing a tape of CQ, CQ over and over, then the ham station HAS committed a violation--not of malicious interference--but of using a mode not authorized for that portion of the band, playing music (broadcasting), or one-way transmissions with no intent of receiving an answer back. But a ham can send CQ, CQ, CQ De K4XXX right over the truckers if he wants to, but I'd be at the key doing it myself. Now I can't help it if "no one" is listening, can I?

I would agree with you, Dick, if I believed that they even knew they were in a ham band. Those that do either don't care but more likely have simply found there ain't nothing there -- certainly the case with most of the 25-30 range. If the object of the game is to talk 2 miles in relative peace, why not. The biggest thing to overcome is Truckstop Annies and Andrews.

The way most of these rigs work, the PLL is expanded in 450 kHz increments. This is how Channel 19 (27.185) turns into 28.085 and 28.535. Six ranges, including the legal ones, seems to be the norm. Not a lot different than the people who futz their 2 meter rigs to talk to the nice lady at McDonalds. That is why I specced a weird spacing

As a practical matter, enforcement is not the answer. There is the old story of the company which was losing inventory in the toolroom at an amazing rate. So it put a man near retirement age in charge with the idea that his retirement fund got a third of any reduced shrinkage. On Monday, Big Louie came up for a tool and was handed a requisition and asked for the broken tool. Big Louie reached thru the cage and grabbed our hero by the throat making it known he did not do such things. Louie's attitude changed dramatically when he saw the .357 at his nose. Such is the difference between an owner and a user.

The odds? Probably about even among reasonable success, screwing up by the reasons you suggest, and finding a new and different way to crap in the nest. On the other hand, what the hell do you have to lose? Garbage

frequencies get different pollution, BFD. Seems worth the try to me and a lot less expensive than a monumental enforcement action.

The underlying assumption here is that the motivation for interloping on ten is the desire to talk with the fellow rig-jockeys on the road in relative calmnity and dignitude. The search for the clear or private or company channel is not limited to truckers or CB, the fishing fleet is equally notorious. So give it to them, WTH.

Yes, rigs will show up in fixed locations. The idea of the mobile-only is to nix the idea of running one's fleet of garbage trucks that way. It is more likely that jitney cabs and a few other less-than-reputable operations will stake a claim before the OTR boys do. There are any number of ways it can bomb out. My hope is that the sense of ownership will prevail and being able to have it squelched with a range beyond 50 yards, a lack of screaming hetrodynes, and some hope of relative privacy will prevail.

Please stop lying about what I said, Dick. I never said the government forces us to be ham operators. What I've said is that before citizens are granted amateur radio privileges, they are required by circumstances (forced) to meet the requirements for a ham license. Any ham who didn't meet those requirements is a criminal.

Well, it's obviously physically possible to interfere with an
unauthorized transmission. Question is, is it legally possible?
Phil says it is a violation of sect. 333.

Often they don't even know what frequency or band they are on. Most have no clue that it is an amateur band and have no clue as to what amateur radio is. All they know is they have a radio with all these channels and these upper channels are free and clear so they assume the can use them. Even for those few who do know it is a ham band couldn't care less that they are stirring up any ill will among the hams. The FCC isn't going to do anything about these illegal ops, at least anytime soon, the only recourse for hams is to use the frequencies and attempt cause enough interference so they go somewhere else. And in spite of what some on the group would like to have you believe, the FCC isn't going to come after any ham for transmitting on top of these morons. What the FCC needs to do is catch a few, and it wouldn't be very hard, and fine the heck out of the trucker AND the company they are driving for. If a few of the trucking companies get some heavy fines for their drivers operating illegal radios, things might change.

I am sure Riley will really be excited if you do that. Just how will you know it is me and what are you going to cry to Riley? "Here Mr. H this licensed ham is interfering with these poor truckers operating illegally on 10 meters. Please make him stop sending his cw on top of them, oh please Mr. H. he is violating the rules concerning interference." But never mind about the illegal truckers I guess. Your going to really be busy, because I hear lots of hams everyday on 10 attempting to interfere with the illegal bootleggers. Hope you have a lot of time and tape.

This is the main reason why I despise the freebooters who have for so long so blatantly disregarded all rule and order. They have been primarily responsible for promoting the idea that outlawry is the answer, and all too often the only working answer. They've made illegality the norm, have gotten away for much for so long that it just looks like it doean't matter any more, even on ham radio. I blame them and that attitude for most of the slippage we see on the ham bands. It's actually amazing that it isn't a lot worse than it is.

its funny because many media outlets took some very good shots of this unit on video. one could simply measure the waveguide and resonance chamber and easily figure out the frequency. of course, the right amount of power is another issue, but 20 rats and an assortment of different gain dishes would fix that problem. the $50 million? inflated salaries for the last ten years..any good geek could do it under $10k easy.

Cecil:

How could I be a criminal if I didn't meet the requirements, Logic Boy?
To make that statement, you'd have to ass-u-&-me that I would have
been operating HF without the requisite license -- which I've never
done! And don't look now, but neither does the vast majority of other
unlicensed citizens. There are a few of your "criminals" out there, to
be sure, but I'm not one of them!

>Once more, please point out the faulty logic:
>
>Axiom/definition: From Webster's: "forced - required by circumstances"

Regardless of whether or not the logic is faulty, that particular definition
is not germaine to the argument.

>Premise: US HF hams were forced to pass a Morse code exam.

False premise. Try again, Logic Boy.

>Proof: US HF hams were required by circumstances (FCC regulations) to
>pass a Morse code exam.

Only if they voluntarily consent to meet this "requirement." There is
absolutely nothing recognizable as "force" being applied to them.

>Conclusion: US HF hams were forced to pass a Morse code exam.

Only in your twisted, illogical mind, Cecil.

>It doesn't matter whether they felt good or bad about it, Larry.
>Their feelings were irrelevant.

That's one of the few true things you've said in the past two weeks,
Cecil. Feelings have nothing to do with it. Just the facts, Ma'am.
And the fact is, nobody was "forced" to take a Morse Code exam
to gain HF privileges. They were, indeed, required to do so, but
they met this requirement by voluntary consent, not force.

Not a thing I know of. This might require some one to actually take
responsibility; Phil only confirms the last of those creatures left the
FCC years ago.

Since you're such a stickler for definitions, look up the definition of QRM,
and tell me how it is possible to interfere with interference.

Can't prove a negative, Cecil.

Deja is defunct. Google doesn't go back very far at the present time, and its
archive is still in development. All you proved is that your search didn't turn
up a certain word in the limited search time.

So the proposed bet is in limbo. Cecil cannot prove he didn't swear, Dave
hasn't yet proven Cecil did swear.

We don't actually know that he did a search since he can't be taken
seriously. My claim was never that Cecil used the actual word "swear"
at any rate. One can make an oath without using that word. He could
have said, "If I eat a piece of cake today, I'll kiss your *** in the
middle of Main Street!" He could then change his mind and forget the
smooch.

I wouldn't trust Al Gore to undertake the Florida recount and then declare himself the winner. You may not have conducted such a search. After all, nothing you hear can be taken seriously--unless you weren't serious about that statement either.

On the contrary, Dick, your statement that a ham isn't a ham is absolute nonsense. A ham is an individual who holds an amateur radio license. My statement is true. Any ham who didn't meet the requirements for a ham license is a criminal. If you, as you contend, weren't required by circumstances (forced) to meet those requirements then you are a criminal.

Why don't you just say you don't know where it's officially published?
Why the diversion? As you know, talking to one Supreme Court Justice
is not good enough. Only officially published material is binding. Why
do you think that talking to one person at the FCC (probably not even
a commissioner) is good enough?

Did you talk to a real commissioner? Did you record the conversation?
Getting the verbal opinion of one Supreme Court Justice is meaningless.
What makes you think an opinion by an obscure person employed by the
FCC carries any weight? Why is that person's opinion any more valid
than Phil's? Note, these are simple questions with no hidden meanings.

I spoke with monitoring engineers at two different FCC monitoring facilities and both agreed that hams interfering with illegal cbers on the 10 meter bands was OK by them, that is did not constitute illegal interference on the ham's part since the interlopers were not licensed. They are the ones at the monitoring facilities who will be listening and making the decision, not any commissioner. It doesn't have to be in writing, the monitoring stations will make the call, not the commissioners. Note, this is a simple explanation, no hidden meaning.

Hey Hans, I ran some cbers off of 10 meters late yesterday. They were 'shooting skip' so I turned the linear on and got right on top of them with some cw. Chased them to three different frequencies before they finally gave up cussin that Morse code and moved below 28 MHz. Did you get it taped? I certainly hope so. Riley would really be pleased to hear that. Be sure and tell him JR did it.

If enforcing the law depends upon the individual monitoring engineers'
personal opinions, that is an unhealthy situation. Where is the *official*
policy?

In Part 15. If the signal emitted is not coming from a licensed station,
then it has to be coming from a Part 15 device. Part 15 devices must not
cause interference with licensed operations and must accept interference
caused by licensed operations. It's just like talking over some spur
coming from the neighbor's kid's video game, even if that screws up the
kid's new high score for Super Mario Bros.

Disclaimer: I am not a Communications Attorney. I tried to play one
on TV, but no one tuned in.

Yep, I did the search but Jim, N2EY, says the archives are
non-functional. But "swear" is not a word I normally use.
My parents taught me never to swear. It stuck and I still
have an aversion to using the word "swear".

How can one swear without using the word "swear"? How can one take an oath without using the word "oath"? A simple statement like, "I will never touch another drop of alcohol" is not swearing or an oath. I've made that statement dozens of times and always changed my mind later after I got to feeling better.

Do you not allow your wife to ever change her mind? If not, do you still have a wife?

210. TrustedQSL Progress report. Need C/C++ programmers

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-06 16:34:32 UTC
From: darryl_NOSPAM@shecora.com
Message-ID: <905C77B2FdarrylNOSPAMshecorac@207.126.101.100>
Source record: 4459
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Greetings,

It has been less than 2 weeks since I posted my announcement
about the TrustedQSL project. When I start I only knew
what I wanted to do and kind of how to do it. Things
are a little more clear now. The goals of the project
are fairly simple:

1. Create a digital signature SDK/system that can used
by anyone with a 32 bit computer.

2. Open Source which means that anyone can have access to
the source code and use it in their programs. Without
cost or other restrictions, except maybe given credit
where credit is due.

3. Easy for software developers to program.

4. Easy for end users and CAs (Certifying Authority)to use

5. Easy for awards sponsors to validate E-QSLs offline

6. Create a project space on www.sourceforge.net for
easy access to source. This has been done.

7. Create a web site.

I now have the following programs working on Linux and
Cygnus Win32 G++:

qgenkey - create a key pair for amateurs.
gencert - for CAs to sign a public key of amateurs
chkcert - validate a amateur/CA certificate.

What is left to do is to write the docs, clean up
the code, port it to wintel32, create Trusted
QSL formats and test it well. The current size of
a cert which includes the public key is 358 bytes.
The size of a signedQSL is around 1k. This means
that more than a 1000 signed trusted QSL could be
stored on a single floppy. I think using a different
encode scheme we can get the size down to less than
300 bytes (current uses ascii hex encoding). I haven't
found the source to one yet, and haven't had time to
write it.

The process of using creating a TrustedQSL is:

1. qgenkey call-sign

2. Have a CA sign your public key
which is the certificate. This will prove that it was
you that signed the QSL

3. Then either a logging program or a free standing TrustedQSL
program will create a signed QSL which with the cert. can
be validated anywhere anytime.

Special servers can be set up as key servers which will
store certs and revoked cert list. Natural place for this
would be web sites like www.vqsl.com, www.qrz.com, www.eqsl.cc,
www.qsl.net, etc.

I have set up an area on www.sourceforge.net for trustedQSL.
This area will handle source code control, bug tracking, forums,
release management and many other things related to this project.
To find information on this project go to www.sourceforge.net
and do a search on trustedQSL and it will take you to the project
page.

I don't program in Microsoft C/C++ so I really need MS C++ programers
to help with this project.

Look, Cecil, I called the FCC with a question, and they gave me an answer. It's as simple as that. It's not like I had some major lawsuit that required a ruling of a supreme court justice. I asked them how I, as an licensed amateur, handle bootleggers, pirates, freebanders, (pick any other synonym) that are transmitting in the lower portion of the 10 meter band that is reserved for CW and digital transmissions. Their answer was that if they are not authorized, the FCC doesn't recognize them. He gave the example of the Russian woodpecker that was so annoying. How did amateurs handle that? I don't see any offically published FCC documents on how to handle the Russian Woodpecker. Why should bootleggers on 28.085Mhz be handled any differently on our part?

Agreed.

>The ARRL BOD decided at their January meeting to simply step aside on the
>treaty issue. They're not going to push for keeping S25.5 - and neither will a
>whole bunch of other countries. The final wake-up call was the Region 3 ITU
>meeting last fall, where ALL of the other national societies in attendance
>voted to support elimination of S25.5.

Actually, the ARRL went further than you state, they decided
to SUPPORT removal of S25.5. In the IARU they will now
vote YES to end S25.5.

>Sure, the ARRL BOD sez they will support keeping a code test without S25.5. Do
>you really think the FCC will follow that recommendation for access to 'phone
>and digital modes? I don't.

Nor do I. Indeed, by the time S25.5 is actually ended (2003),
the support for keeping a CW test in the US will liky have
dwindled also (IMHO).

>>>>which is not the purpose of the requirement.
>>>
>>>The test requirements have a variety of purposes. They vary over time, too.
>>>What those purposes should be has long been a subject of debate.
>>
>>Tests should only have requirements which can

>>
>>Bingo! So why does how well someone can copy
>>code have anything to do with having a big effect
>>on other hams?
>
>Because inability to copy means they almost certainly won't use the mode.

Who cares, so what? Where in part 97 is there any
requirement as a ham to EVER use any specific mode?

>And
>for most people, learning to send is far easier than learning to receive.

That's just the justification to only test recieveing, it
doesn't justify any need for the requirement to begin with.

>>>>If you want to hype the narrowbandwidth value of morse
>>>>over voice, that's fine,
>>>
>>>It's not "hype" - it's fact.
>>
>>Hype, advertise, spin, whatever...it is all about
>>convincing others to use the mode.
>
>Is that a bad thing?

Not at all. I applaud you if you take it as a challange
to do so without requiring mandatory CW testing.

>>If it is so
>>efficient, then why are some people worried that
>>it will cease to be used if there is no test requirement?
>
>Because before it can be used effectively, some skill is required. Like manual
>transmissions....

And, there seems to be a good following of manual
transmission users even though there is absolutely
no laws requiring such knowledge or preferences.
If there is NO morse test at all, would you have some
fear that "unskilled" CW users will ruin the non-phone
bands?

>>>> but the FCC sure hasn't bought
>>>>that argument as a justification for code testing.
>>>

>>>Agreed. They are into minimum requirements now.
>>
>>Which is ALL they should be.
>>
>Minimum requirements often lead to minimum performance.

Minimum requirements set a threshold. Will some people never
go beyond that? Sure, that's human nature and the
population of hams has always had such people. Likewise,
the history of ham radio abounds with many people that
go well beyond the boundary of that minimum threshold.

The problem, as I see it, is that you and many others
want EVERY ham to meet some ongoing learning
process. Frankly, that is absolutely not going to happen
nor has it likly been so since the first piece of
commercial ham gear became available. I believe
we'd be better off if we worked on "making it happen"
with newly licensed hams by being role models
ourselves rather than demanding continued testing
at higher levels beyond where we are now.

>And the real question
>is - who decides what "minimum" is?

The FCC decides. We are offered the opportunity to
influence that decision by coment.

Cheers,
Bill K2UNK

The same is true in NJ on I-287, eastern end of I-80, and others
that still retain the sham 55 limit.

No, Cecil, these are not-so simple questions. This is another attempt on your part to start another long, drawn-out thread about what the definition of "forced" is.

If you can prove the opinion of the FCC is other than that of the conversation I had with them, (and am satisfied with) do so. I'm not doing homework assignments from you.

I agree also. Indeed, from a practical perspective,
who would actually appear to be the interferer anyway?
Also, who would likly issue any citation based on what they
heard? Would an OO cite the hams for interfering
with the illegal trucker QSO? Would the FCC?
While this may make for great hypothetical pondering,
the reality (IMHO) is that the hams wouldn't be
cited for anything given the presence of a pirate/bootleg
signal on the same frequency.

Your mileage may vary :-)

Cheers,
Bill K2UNK

I tend to believe this. The "practical" aspect is that the
FCC won't do anything against the hams in that scenario...
regardless of any legal technicalities. By analogy,
it's somewhat like the police looking the other way when
citizens have sometimes taken the law into their own
hands against particularly loathsome criminals.

>They are the ones at the monitoring facilities who
>will be listening and making the decision, not any commissioner. It doesn't have to

It is, also, more likly the truth of what will happen
regardless of the technical legalities.

Nice try Jim, but no cigar. CB radios (bootlegging or otherwise) are not Part 15 devices.

Good luck on this one now!

I'm just wondering why you feel so strongly about this point if not for the
reason that it is somehow tied to the other. You haven't commented on your
view of the underlying importance of this force issue. IOW, what's the big
deal?

Sorry for all the typos in my post. There's no question that jamming the
truckers with a unidentified carrier is NOT a legal activity for hams to
conduct. The rules explicitly prohibit us from making such transmissions.

The best idea I've heard is to try to conduct amateur communications on those frequencies in order to increase the use of that part of the band and also to discourage unlicensed people from trying to homestead.

Cross your heart and hope to die?

> It stuck and I still
>have an aversion to using the word "swear".

Except in this post, where you have used the word four times.

The easy way to settle this is for each of you to send $100 to me. That way you
can both claim victory because you can both say in all honesty that the other
party to the bet lost because he had to pay $100.

In fact you could swear to it.

Send all funds (no personal checks, foreign currency or perishable pastries,
please) to:

Southgate Contest Fund
c/o N2EY, Grand Poobah, BIT #0001, FISTS #4360

QRZ database address is fine.

Yup, I'd PROUDLY narc on 'em both in a New York second, and *especially* the ham who damned well knows better. When the time comes that we abandon the idea of "policing our own", or "looking the other way" when a fellow ham engages in vigilante justice, that's the day that the amateur bands become uninhabitable.

>
>Otherwise I agree with your point about malicious interference.

Two hams attempting to have a legitimate QSO on a frequency
that they are both authorized on may not be considered
malicious interference to "bootleggers" occupying the frequency
if the intent of the QSO isnot to annoy the bootleggers.

Throwing a carrier or calling an extensive "CQ" with no
intention of establishing two-way communications is arguably
malicious.

There is case law concerning when interference which appears
to be authorized transmissions is considered "malicious", so
determination of when interference is "malicious" is easily made
from the case facts by a trained enforcement attorney.

>do?

Section 97.101(d) of the Rules is very clear:

(d) No amateur operator shall willfully or maliciously
interfere with or cause interference to any radio communication
or signal.

Notice that the text CLEARLY says "any radio communication",
not "licensed communication(s)" as other rules and statutes
dealing with other aspects of interference do. There is no
reported case (binding interpretation) holding that unlicensed
communications do not fall into this "any" category, and in
the absence of such, the "plain language" interpretation
of "any" holds.

If the ham conducts him/herself in violation of the rules, who
do you think the mousetrap will spring on?

If whomever you spoke to at "the FCC" is not picking up on this
specific wording and nuance when giving you that interpretation,
have them call me. They have my number in the private telephone
book under the heading of "District Director (Retired)" and
"Communications Attorney (Active)".

It's so hard to get trained help nowadays.

In my experience, Commissioners may know policy that they have
worked and spoken on but they are not necessarily knowledgeable
about the detailed black letter law underlying same. And rarely
are they aware of the nuances or processes of enforcement if it
does not involve some national policy such as cable must-carry,
low-power FM, or broadcast indecency.

Do not forget that the Commissioners are appointed for their
political policy-making posture, not for their detailed
techanical or legal knowledge of the communications field.

That's why they have Legal Assistants, whose job it is to go to
the Bureau responsible for a specific matter and get the info,
then report back to their boss. AFAIK, no current (or recent
past) Commissioner has an Engineering Assistant although years
ago some of them did.

Not true at all. "Part 15" transmissions are considered to be
authorized (licensed) transmissions for the purposes of the
Comm Act.

Unlicensed ("pirate"/"bootleg") transmissions are not.

Oral information is worth less than written information,
and even if it is written, it is worthless if it is does not
agree with what the law provides.

So says the US Supreme Court in _OPM v Richmond_, where
Charlie Richmond relied on a letter that the Navy sent to him
about retirement benefits which had incorrect information in
it, Charlie relied on the information in letter, and his
retirement benefits were reduced as a result.

Where are there two monitoring stations with manned staff any
more? (I only know of one and they don't answer questions from
licensees or the general public.)

And to add more kerosene to the bonfire - even if the FCC
decided that they won't enforce the rule (for whatever reason),
violations of the rule are still violations, and if they want to
make an example of the violator, they can.

Remember that Al Capone went to Alcatraz over less than a
dollar of income tax evasion.

Cecil, it really looks like you're losing it, fella. You can't
understand that an individual who hasn't passed the FCC testing for an
amateur license is not a ham. Only those who have passed, and been
issued that license, are hams.

Earth to Dick. Your statement is true but irrelevant. We are talking about
***HAMS***, you know the individuals who possess amateur radio licenses?
Any ***HAM***, i.e. one who possesses an amateur radio license, who didn't
meet the requirements for an amateur radio license, is a criminal.

There are ***HAMs*** who didn't meet the amateur radio requirements. Those
guys are criminals. Are you one?

Your right on Bill, as far as the 'letter of the law' about interference that some on hear want to bandy about and play lawyer, it doesn't matter what the 'law' says or what any commissioner thinks, if any one at the FCC station hears any such interference it will be the engineers at the monitoring stations, or maybe Riley scanning around, and no one is going to be cited by the FCC unless these folks pursue it. I seriously doubt they are going report any hams who may be interfering with illegal stations operating on 10 meters. So the fine point of the law is moot, spout the rule all you want wannabe lawyers, when a ham interferes with an illegal cber on 10 meters and an FCC monitoring stations happens to hear, they are going to simply ignore it, period.

You can't interfere with an illegal signal period.

Yes I have, Bill. I was recently caught drinking while driving
and not wearing a seat belt. The Highway Patrolman let me go
with a warning. If I had been 21 years old and/or black, he
probably would have arrested me. Selective enforcement of the law
is a bad thing even if it worked to my favor that time.

Just try and behave yourself on the air, JR. We don't need to create the kind of reputation CB has by lowering ourselves to that level. Use the frequency for communications - not for jamming.

We have so many laws that it's hard not to break any. Selective
enforcement means that all citizens are not equal under the law.
We might as well have a Bill of Attainder. It's not an honest
situation and it seems to be getting worse. As a 63 year old
white man in Texas, I can get away with almost anything.

Negatives are generally impossible to prove unless a mutually exclusive
condition exists. Phil, an expert in the field, disagrees with you. That
fact behooves you to produce some valid evidence. Note that I asked for
proof when Phil related his tale about Pres. Bush and JY1.

It's OK to use the word negatively as in, "I don't swear", and it's
OK to talk about the word itself, e.g. "swear". It is not OK to say,
"I swear to <something>". Dave claimed that I swore never to get an
Extra license. He is lying.

Hans,

I just can't see your position on this. If I want to use 28.085 under the terms of my license for CW/digital and there happens to be a bootlegger there, I cannot see how you would want to paint me with a criminal brush. To me, it is quite simple. I am LICENSED for that frequency. As long as I use it in the manner for which it was intended, I cannot see your position of (seemingly) making the ham out to be engaging in deliberate interference. Thusly, if I send out a series of CQs on top of some idiot who has no business being there, I am perfectly legal. If I begin to play music, holler at the truckers on AM, set a dead key or a continuous tone, then I am operating outside of the terms of the use of that sub band. In that case, I AM operating my station illegally and the truckers don't really have anything to do with that--it's something I agreed to (that is, to operate within the regulations) when I obtained my license. If I send out CQs and no one answers, I can't help that. And my "intent" cannot be questioned.

The whole thing boils down to the fact that I have a perfect right to be on 28.085 operating with the modes allowed, the trucker bastard has NO right to be there, and if I "interfere" with his stinkin' export, roger-beepin' piece of sh** radio, all the better. I have no sympathy for the law-breaking "freebanders" and their illegal radios.

So, Hans, no hard feelings on my part, but if you hear K4KWH sending CQ on 28.085 go ahead and turn me in. LOL!

A licensee was ordered to show cause why its private radio and common carrier paging licenses should not be revoked after a Commission investigation revealed that one of its PCP stations had repeatedly and willfully transmitted in a manner that caused harmful interference to the transmissions of a competing PCP station. Monitoring of the licensee's PCP station by Commission staff suggested that transmissions made by the licensee on certain days were not for the purpose of conveying actual pages for subscribers. Rather, the licensee was apparently attempting to degrade the quality of service provided by its competitor so that the competitor's customers would take its paging service. In addition, information before the Commission suggested that "test" transmissions conducted by the licensee on several occasions were not kept to a minimum and did not employ sufficient measures to avoid harmful interference, and that the licensee retransmitted previously completed common carrier and PCP pages at times in an attempt to reduce the amount of time available for its competitor to complete its legitimate pages. Finally, it appeared that the licensee had made misrepresentations to the Commission in its responses to inquiries about the interference to its competitor.

Capitol Paging, 73 RR 2d 1381 [1993].

I don't know many people that have any favorable
attitude towards such "poster boy" enforcement of
speed limits. Few would tolerate speeding in residential
areas, but everyone (yes everyone) pretty much
believes that 55 on the highway is a joke.

By the way...when did speeding become a vehicular
crime?

I defined it in the part that you cut out, Jim. Hams are individuals
who possess an amateur radio license. Some hams possess amateur radio
licenses who never met the requirements. This happened a lot during
the time only one General ham was all that was required to certify a
Conditional ham. A friend of mine flunked the 5wpm code exam at the FCC
when I got my Novice license. Next rattle out of the box, he was a
Conditional and he still couldn't do 5wpm.

Phil,

Not having the legal experience you do, I may be way off base. But I would think that it would be hard to prove one's "intent" when there are two legal stations on a given frequency holding a QSO, or even if someone sent a lengthy CQ. After all, that person cannot know if someone is going to answer, or he *might* not even be hearing the interlopers. To me, the greater weight of legitimacy would bear on the licensed station(s) as long as they were operating within the terms of their tickets. Unless they were using the wrong mode (AM, for example), playing music, or throwing carriers, "malicious" would be hard to prove. Just MHO.

ROTFLMAO! Proving intent is always good for
a few laughs unless there is explicit statements by
the individual admitting to such intent.

> Throwing a carrier or calling an extensive "CQ" with no

Throughing the carrier maybe, calling CQ is a reach.

Which sounds to me ten that the vehicular crimes unit
doesn't get involved in plain vanilla speed enforcement
then. Is that correct?

Thanks for the cite Phil. My one comment is
that this case reflects a clear "ongoing" set of
incidents as opposed to a single interference
situation. The single incidient is really the more likly scenario
we have been discussing.

Cheers,
Bill K2UNK

It also "assumes" that the carrier-thrower has the
qualifications to make the decision that the station being
thrown upon is illegal.

Only the Commission can make that decision. The bozo operating
AM on 28.085 and using a "CB" handle or otherwise failing to
identify can very well be a licensed operator, at which time we
have a rule violation by a licensee rather than an unlicened
transmission.

Sure, most hams here and elsewhere can make an accurate
guess, but it's up to the professionals to make a qualified
determination.

Proving intent was the fun part of the drudgery of stakeouts,
surveillance, and monitoring. We had one old-timer who could
sit in the seat for hours without getting bored and get reasonably
accurate intercepts but who had no feeling for intent. We had
another who could make a snap decision in five minutes and be
right on the mark every time.

>> Throwing a carrier or calling an extensive "CQ" with no

That's why we sharks use terms such as "arguably"... <ggg>

>> There is case law concerning when interference which appears
>> to be authorized transmissions is considered "malicious", so
>> determination of when interference is "malicious" is easily made
>> from the case facts by a trained enforcement attorney.
>
>Does that case law apply to interference with an
>identified "pirate" or bootleg station?

I did post the Capitol Paging case digest. Although that case
involved interference to other licensed stations, the criteria
for determining whether transmissions are malicious interference
would still apply, and the question then is whether causing said
malicious interference is a violation or not.

The "any radio communication" wording of Sect. 97.101(d) would
make it a rule violation. Whether the Commission agent(s) -
the first line of decison - would take any action is not the
issue in question.

If someone wants to fight the ticket, there has to be SOME
Deputy DA assigned to the prosecution......depends on who's
free. Probability is that it would be a junior in the unit,
(not all DA offices have separate misdemeanor units) but you
never know.....Lyn gets his kicks out of courtroom litigation
at all levels.

His non-vanity call is KD7DX, BTW -- a lucky break.

Yes, and not to communicate with THEM, either. Hams are prohibited from communicating on the air with unlicensed stations. If you yell at them the FCC could decide to cite you instead of them.

Don't bet on it. I knew a young trooper who cited a motorist for doing
57 in a 55 zone. The officer was cruising at 55 when the guy passed him,
and he saw something he didn't like. Redlight time.

If I were to establish a "Trucker's Band," I certainly wouldn't place it anywhere in the HF range. It should ideally be UHF, to limit range to line-of-sight and sanction illegal power amplifier owners with fried brains. I'd also permit base-to-mobile comms between dispatchers, truck stops, police, etc. 25 channels, 1-5-10-25 watts power selectable, licenses (with significant license fee) and use of call signs required, also channels dedicated to data modes and an APRS-like GIS-based service.

Just my $.02.

Jim:

Cecil's "argument" (more like a whining, foot-stomping rant) about hams being "forced" to take Morse code tests is simply an extension of the same objections to learning and being tested on a useful communications skill which has been the trademark of no-coders since they emerged on the scene. It is all about the laziness of people who see something they want (talking into an HF microphone) but don't want to exert themselves in order to gain that privilege. It is welfare state mentality. If Cecil had never been frustrated by the code testing requirements in his ham career, he wouldn't be engaged in this pedantic, churlish quibbling over the word "force." This is all about Cecil's emotional immaturity, and little else. It is truly pathetic.

If I had a clean sheet of paper I wouldn't put it on Lo-VHF either. There are however facts on the ground today. The idea is not to put obstacles -- and you propose some doozies -- in the way of acceptance of a superior but low risk approach. This may be wierd but it does have the advantage of using existing antennas and power plugs. A lot of company fleets are loaded with gear to locate the truck and communicate with it; talking to his dispatcher is the least of his worries. The same problem of a 45 foot box that produce co-phased mirror mounts also exists at UHF.

I guess the point of debate is why it is truckers, who are as a group among the 'opinion leaders' of CB if you can stomach the term, are leading the sheep further afield and into 10 meters. If the truckers get away with it, the fixed power jocks are sure to follow. And they will -- both get away with it and develop a following. I am not guaranteeing results but not much changes if it turned into a fiasco.

In the early days of telephones, the phone companies did not support the use of their lines for chatter and could not for the life of them understand why a farmer needed a phone. They were wrong. Such data as exists would suggest that trucking use of CB is short range and pretty much restricted to inter-truck usage. Are we making the same mistake?

Opening it up to the company, the law, and dispatchers either duplicates existing gear or defeats the whole purpose. Remember when CB was largely truckers and became chic in the fuel crisis and double nickels era. Are we making the same mistake?

Your two cents is worth every bit as much as mine. Thanks.

Dick

BH? I thought you were JR. Make up your mind. :-)

Don't know if it's "legal", but I would consider it "behaving yourself". I think I explained in another post that, in my way of thinking, transmitting a carrier for the purpose of creating interference would be illegal. But maybe the difference between that and having a QSO is a bit too subtle for you to discern.

> enforcement cases?

According to:

http://www.maricopa.gov/attorney/1majorcri.asp

Vehicular Crimes prosecuted by the Maricopa County Attorney are:
Vehicular homicide, aggravated assault and aggravated driving under
the influence cases are handled by the Vehicular Crimes Bureau.

So I doubt your baby brother will be making me a poster boy anytime
soon... :-)

BTW the prosecuting of speeding tickets is done mostly by rookie
attorneys and those who can't make it on the outside. It's real grunt
work, but I'm sure you knew that... :-)

Why would you call people with ham licenses bootleggers? Are you
a bootlegger?

He is as much maverick as I am. If he decides that it's time
to make an example out of someone, he'll make sure that even
though one of the grunts does it, he'll keep a sharp eye and a
guiding hand on it.

Larry, "exerting themselves" is a lot like "produced with effort",
the dictionary definition of "forced". You have already admitted
that your Morse code skill was "produced with effort". Therefore,
according to your very own dictionary, you were forced.

Most are handled by the court clerks as guilty pleas with fine mailed in. Fighting it is almost always folly and more costly than just paying up. Mostly you don't have to go to court, just mail in your plea form and fine, from the fine schedule you get with the ticket. In these parts, at least.

Years ago the Arizona Highway Patrol, which has responsibility for the freeways running through Phoenix, cited violators into Phoenix City Court. But the judges there found *against* the officers all too often. They finally got fed up and changed to citing their violators into the county JP courts instead, where they got a more fair shake (according to them)... :-)

BTW our county JP judges *don't* have to be lawyers, so they often have some common sense... :-)

>Mostly you don't have to go to court, just mail in your plea form

Here too. Also you have a school option which takes some time, costs as much money, but keeps the violation off your drivers license which is good for insurance rates...

Most any decent court will throw that out as being insufficient
(i.e. a deminimus) difference to warrant a ticket to begin with.

Yep,paid my dues several times that way. Arizona was
the easiest as you could plead the equivalent of no
contest, pay the fine and the ticket never shows up
on your license.

It has never worked that way here Bill. You always got the points with a no contest plea. The only way to avoid the points was to beat the ticket or go to school...

Would you swear to that?

>and it's
>OK to talk about the word itself, e.g. "swear".

I see. So you don't swear but you may "swear". OK.

> It is not OK to say,
>"I swear to <something>".

The actual claim is that you "swore" NOT to do something. However, no actual
evidence of such has been presented. Besides, we all know that any evidence
presented from a rrap post would simply be dismissed as by the fact that you
were "not serious".

>Dave claimed that I swore never to get an
>Extra license. He is lying.

No. He's simply mistaken. BIG difference.

Let's see - three uses of "swear" and one of "swore" in this post, not counting
my use or quotes of old posts. Of course none of them were actual swearing, so
they don't really count.

btw, which definition of "swear" are we using? The one that means "taking an
oath or promise" (as in "I swear to tell the truth, the whole truth..." or the
one that means profanity ("He swore like a drunken sailor...")?

I'm sure your intention was good, but if you go to the mcafee site
(the one your message references) and look under hoaxes you'll find
this message, and it's represented as a hoax. The text is only
slightly different. So what your friend sent you was possibly in
error. I make no judgement of him or you. However, there are a lot
of hoaxes as well as real viruses going around. You might go there
and check it out. It's interesting.

Just thought you'd like to know.

Tony

Although this one is a hoax, there is a very nasty one that is NOT a hoax - it has"nakedwife.exe" as an attachment. It does not seem to be spreading as wildly as predicted. Perhaps everyone is beginning to learn not to open mysterious mail messages.

Interresting case. Fairly clear cut though. Didn't seem to involve a lack
of FCC enforcement of Part 95 rules.

The presumtion is that anyone who has been issued an amateur license has met the requirements to the FCCs satisfaction. It's not clear why the validity of the logic underlying this presumtion should now rely upon a rare exception you might happen to cite. Because it is true that all hams were required by law to demonstrate their qualifications to hold an amateur license.

I noted your comment about the 'two for one' deal. I suppose that may be
the price for getting the FCC to take notice of the illegal incursions into
the ham bands, and begin to enforce their rules. Why are the "properly
trained enforcement attorneys" not interested in these particular rules
violations?

>
>au contrarie, that was certainly not the case about 1983
>when I was tagged in AZ (NJ license).

If points didn't show up on your license in NJ because you got a
ticket in AZ there could be several reasons:

-The ticket was a non-point offense.
-AZ possibly didn't have reciprocity with NJ at the time.
-The system screwed up (most likely).

But it was *not* because you pleaded no contest.

From the Phoenix Municipal Court web site:
" Plea Of No Contest - This plea, also known as nolo contendere,
means that you are not admitting guilt and not denying it. You are
saying that you do not wish to contest the state's charge against you.
Upon a plea of no contest, the Judge will enter a judgement of guilt.
Unlike a plea of guilty, a plea of no contest cannot be used against
you in a civil suit."

As you can see a plea of no contest is entered as a *guilty* plea by
the judge. This is what produces the points. The reason for a no
contest plea is simply to avoid having the evidence of a guilty plea
used against you in a civil lawsuit, which normally results only from
traffic accident related citations. I spent many hours in that court
from 1968 to 1992 and I did see many misguided citizens plead no
contest in non-accident tickets because they thought that they were
innocent, but didn't want to go to trial. The judge didn't care, but
carefully explained to them that the fine would be the same and points
would be issued...

Its a rare court in these parts that will toss out a complaint by an officer without some really strong evidence against it. I don't know the outcome of that case but most likely he mailed in his fine. That way he doesn't have to take az day off from work to go to court, then probably have to pay just as much fine, or more, than if he had gone ahead and mailed it in. Nothin' says the judge has to stick with the published fine schedule if he finds reason not to....you standing there arguing how innocent you are might do it.

Another one I received a couple times is an email message with no address, no signature, no text, nothing except an attachment titled "Norton Antivirus Report". My Nortom antivirus program grabbed it, Id'ed it as a virus and quarantined it. It wouldn't be smart to open any attachments.

Do you suppose that Lyn's boss County Attorney Rick Romley would approve of one of his top attorneys taking the county's time and money to make an example of a newsgroup freeway speeder? Our local newspaper The Arizona Republic would love such a story considering how the public feels about our freeway speed limits and wasted tax dollars. Thank God for the press to control those maverick attorneys... :-)

Hi Bert,

I'm sure that the law of averages says that somewhere, someone's been pinched by this rule. Common sense would similarly dictate that it would likely have been in conjunction with a more conspicously egregious offense. (A couple of hundred watts worth...perhaps?) I went for a solid ten years or so with 30 watts and I've never attracted any unwanted attention or actually heard of anybody else even receiving so much as a warning.

You know my credo though, be good. If you can't be good, then be careful. It's far better to be good though. I just picked up an Alinco DJ-V5TDC, good little h/t at a reasonable price. Bert, weren't you looking for a good 2m h/t? Here it is. I got the clear model, kinda nice actually. I wanted something small and unobtrusive for my desk at work, this fits the bill perfectly. I though about the Radio Shack HTX-200. You know what happened there...and so does Radio Shack.;-) Take care.

I didn't suggest that it might be a hoax.
I flatly declared that it is undeniably a hoax.

> I did get it from a fairly reliable source.
Formerly reliable source.

> I just passed it on as a note.
You could easily have checked the facts on any of many websites which list this prevalent hoax.
Though it contained so many tale tell signs of being a hoax, that only a novice would be fooled by it.

You really sure, Tony?? This is direct cut-and-paste from the McAfee site:

W32/Naked@MM (NakedWife Virus) Help Center
W32/Naked@MM is a HIGH RISK virus that is spread using the Windows email program Outlook. The infected email can come from addresses that you recognize. Attached is a file named NakedWife.exe, which poses as a Flash movie. When run, it copies itself to a TEMP directory and displays a window entitled "Flash" which reads "JibJab loading".

Moral of story: Don't open .exe files attached to email.

Your brother is confused, mistaken, misunderstood, or non-existent.
"Virtual Card" is a hoax.

The value of the case is not whether it involves CB, but what
factors are or must be taken into account in determining when
an otherwise legal transmission in any radio service becomes
malicious interference.

1. The Congress wants CB and its problems to go away without
any effort or attention on the part of The Government (read:
"money" for "effort"). See what's happening now with the OSHA
ergonomic rules, where The Congress is substituting its
political judgment for the agency's technical judgment (in
apparent violation of a long line of Federal Appellate Court
rulings).

2. The powers that be at the FCC do not have the backbone to
confront The Congress on enforcement issues.

3. Those qualified agents and attorneys who are left are directed
not to deal with it by their superiors, the responsibility for
such decisions eventually reaching up to a level where the
individual has no knowledge of the problems in the various
radio services and may care even less, thus fulfilling The
Congress' desires.

The theory of Chekhov's Dog applies (note well -I will refer to
it from now on) -- the prince kicks the duke, the duke kicks
the next lower nobleman, eventually the janitor gets kicked and
turns around and kicks his dog.....

Now that everyone knows it is a hoax, wouldn't that be a perfect
title for a real virus?

I agree and like the way you expressed that, Jerry. I spoke briefly with Mr. Hollingsworth at Dayton last year (he seems a reasonable man), and should he have any problem with what you have said here - I would like to speak with him again this year on just this subject. Hope he attends Dayton again; he received lots of applause last year.

"Pay-to-Pay" (e-file) is not the smart way.

Of course. My point was that the case did not involve someone who was operating without operating privileges. I'm sure other case precidents would enter significantly into the matter, and the outcome would probably be different than the one in the case you cited.

That's a pretty good list of excuses there, Phil. Now go to work on a list
for why hams shouldn't be blamed for the interfernce they are caused by
truckers using their bands, and maybe you'll have made a difference.

> The theory of Chekhov's Dog applies (note well -I will refer to

So the dog is whom - the trucker, or the ham?

"Required by law" is the same thing as "required by circumstances" where
the circumstances are the law. "Required by circumstances" is the definition
of "forced". Yet Dick says he was not forced to pass a Morse code exam, i.e.
he was not required by circumstances to pass a Morse code exam. If he was not
required by circumstances to pass a Morse code exam then he is admitting
that he didn't meet the requirements. It's all perfectly logical.

Let's summarize, Dick. A person with an amateur radio license was
required by circumstances (forced) to meet the requirements for an
amateur radio license. Any person with an amateur radio license who
didn't meet those requirements is a criminal. If you were not required
by circumstances (forced) to meet the amateur radio requirements then
you obtained your amateur radio license through fraud.

Here's what I said in the original: I took my 13wpm code exam and
passed it but flunked the written exam for Conditional. A month
later, I retook the written exam without taking another 13wpm code
exam. The second ham called the first ham who verified that I had
passed the 13wpm exam a month before and he assumed that I had
not forgotten the code over the last month. The posting was designed
to get your dander up and it certainly did. Your dander is still up.

I believe that the "NakedWife" virus that you refer to might well be
real, but I was referring to the "VirtualCard" one that he referenced.
I thought my message was pretty clear - maybe not. Notice what I had
in parenthesis.

But I agree totally with your moral. I even carry it a bit further, I
don't open *any* attachments without careful steps, and running a
virus protection program. And I still got hit once.

Tony

The "draw a diagram" questions disappeared in the '50s.

The old tests were much closer to the technology in use by hams of the day than
today's tests are. You did not know the exact Q&A beforehand, nor even the
number of questions on the test. Sample test? No such thing - just the study
guides.

>>>
>>>ARRL license manuals, AMECO study guides, and others
>>>gave the same info, often with "sample" test questions that
>>>amazingly were indeed on the test in sometimes, exact
>>>format.
>>
>>But you did not KNOW ahead of time that the questions
>>and answers would be so similar.
>
>Sure we did.

Maybe you did, but most of the folks I knew taking ham exams in the '60s
didn't. For example, we knew there would be Ohm's Law questions on the exam,
but we didn't know what they would look like. So we learned Ohm's Law backwards

and forwards, just in case. The problems turned out to be pretty simple, if you knew Ohm's Law.

>The testing on which those manuals was
>based didn't change dramatically from month to month.

We didn't know that either. Of course we know NOW that there weren't many different tests (that was part of the reason for the 30 day wait), But the hams I knew did not know that there were only a few different tests.

>Did we know the exact questions? No, but clearly the
>license manual publishers had a solid track record of
>providing more than enough material in an abbreviated
>form (the license manual) to enable people to use
>the manual and pass the tests.

The FCC provided a study guide. The ARRL manual simply reprinted it in the LM.
>
>>Today, a prospective ham knows that the exact Q&A in the study guide
>>will be on the test.
>
>Yet the syllabus of those questions being used takes more
>pages to print than any of the old license manuals did.

Because the new manuals explain the material in detail. They are meant as stand-alone guides. The old fifty-cent LMs urged the reader to read other books as well. Some folks managed to pass the tests using just the LM or AMECO books. Others used more extensive materials.
>
>>The ARRL LM study guides were just reprints of the official FCC study

>
>If I memorized the fact that AMPS is the unit of electrical current,
>the detractors (wrong answers) make little difference. Any good
>test taker knows that.

For that question, yes. Many of the questions were a bit more involved than "what is the unit of electrical current".

The Extra questions in the old LMs were quite interesting. 279 study questions, all essays....

But an Extra was not needed for full privileges until 1968.

>Possibly so, and the reason being (IMHO) is that the
>knowledge level needed to be competent by industry
>was still growing...as it is today.

The knowledge base is not so much larger than it used to be - it's very different. And the role of "radio" has changed. Time was, radio was a big part of electronics - in fact, radio and TV made up most of the electronics industry. Today, radio is but a small part of electronics, eclipsed by computers and other technologies. The cutting edge of communications isn't even electrical anymore - it's fiber optics.

>The ironic part is that
>while the complexity has increased by many orders
>of magnitude, the quality and reliability have also.

That has been a constant since the earliest days. A 1940 radio was far more reliable and used better components than a 1920 one. WW2 made an enormous difference in this regard, as mass production of highly reliable electronics was necessary to support the war effort. (The proximity fuse story alone is a case in point). After the war, both military and commercial demands kept pushing the quality/performance/reliability requirements. The computer and space industries got into the act, too.

The end result is that the definition of "component" began to change. In a PC, for example, the various boards are really components in most cases.
>
>Likewise the cost of production has plummeted to a point

Agreed. With inflation, these prices are even lower than they appear at first.
$300 was a lot more money to the average person 30 years ago.

>Several years ago I read marketing article that
>stated the price point for "impulse purchase" was
>about $300. That is, if something costs 300 or
>less, most consumers don't consider such a purchase
>as requiring considerable thought, planning, or
>justification...they just buy it.

I agree on the $300 number, but I would call it the "threshold price". When the
price of something gets down that low, the market for it expands tremendously.

But there aren't a lot of HF ham rigs for under $300. 'Specially ones with all
the latest features, multiple bands and modes, and ~100 watts.

>>
>>Unless you wanted to operate 'phone, there was no reason to.
>
>Why? The General had significant HF phone
>bandwidth.

I was speaking of the old pre-1953 system, where Generals had only 160 and 10 meter 'phone on HF/MF. They could use all amateur frequencies, but the other HF phone segments required a Class A (pre-1951) or an Advanced or Extra (1951-1953).

After November 22, 1968, the amount of spectrum available to Generals in the 80/40/20/15 phone bands was cut almost in half. But starting in 1972 the phone bands were widened, and as the years went by the available General spectrum increased to about what it had been before. I can post exact numbers if you want.
>
>>For serious CW, you needed an Extra.
>
>Why?

Here I'm talking only about after the 1968 changes. Sorry to be so unclear.

The "lower 25" are prized for a number of reasons, and "serious" ops want all available privileges. Just my opinion.

>>>Yet we finally see an actual increase and commitment
>>>of such resources for enforcement in the last 2
>>>years.
>>
>>The big commitment of resources is in enforcement, not license testing.
>
>No resource commitment is needed in license testing.

Sure there is. The FCC has to do the paperwork for every upgrade, approve the question pools, do a lot of admin work. By simplifying the regs, a lot of that is eliminated.

Under the old system, a ham could theoretically upgrade as many as 4 times. That meant a new ham who started as a Novice or Tech and worked up to Extra one step at a time would generate a total of 5 FCC transactions while doing so - the new license and 4 modifications. The new system cuts that almost in half - a new ham who starts as a Tech and works up to Extra generates only the new license and 2 modifications.

>The
>system appears to work quite well...or do you think

Which system are you talking about?
>
>>And
>>that commitment came because of endless requests and complaints from the
>ARRL,

>>other ham groups and individuals.
>
>I care not why or how it came about, I am simply happ
>to see the enforcement.

Every ham should care how it came about, because without those who asked for it (like the ARRL staff) it would not have happened. Without a strong national organization, ham radio won't last very long.
>
>>The R&O changes created a short-term flurry
>>of activity, but will result in long-term savings because the whole
>structure
>>is simplified.
>
>Savings for who? On what basis?

See above. Every transaction costs the FCC resources. Reduce and simplify the transactions, and the cost is reduced. That's why the license term was doubled to 10 years - it saved the FCC at least a thousand person-hours per year back in 1983. Today it's probably twice that - which means they have an entire staff person free to do other work.
>
>>One interesting side effect is the number of Novices who have renewed since

>unknown pirate operations in the lower HF segments?

No, I'm simply pointing out that the spectrum and propagation that an "11 meter" op gets by going legal is not very different than what he/she is used to. To get legal HF spectrum that has very different propagation requires a General.
>
>>Pre-R&O General meant 3 written tests totalling 100 questions and 13 wpm

I think it does.

> On my trip to Extra I took and passed
>6 tests (Novice, Tech/General, Advanced, Extra
>and both 5 wpm and 13 wpm).

I took 7 tests, over a much shorter time period. Novice, General, Advanced and Extra written, 5, 13 and 20 wpm code, all within 3 years.

> I care not one iota
>that others can do the same thing now via only
>four tests, nor that some others took 8 tests to
>do it.

Nor do I. That's not the point. What matters is that prospective hams used to be faced with taking and passing many more tests than they are today. Don't you think some of them looked at the whole process and were discouraged by the sheer number of tests?
>
>>The "price" of full privileges has been reduced even more. But remember, the
>>FCC's idea of the appropriate requirements has wandered all over the map in

>of radio theory and individual mode usage (i.e. the
>role of CW in today's world).

I think what has really changed is simply the FCC's opinion. They don't see the need for extensive testing anymore. Their main focus is to have an orderly service. That's a good thing.

He, also, was required by law to meet the requirements, whether he wanted
to or not; whether he did or not. (And I'm sure he did.) All hams are
presumed to have met the requirements owing to the fact that they have been
licensed by the FCC..

Cecil:

Here's another definition of "forced;" from the Merriam-Webster Collegiate
Dictionary:

forced (adjective)

First appeared circa 1537

1 : compelled by force or necessity : INVOLUNTARY <a ~ landing>

2 : done or produced with effort, exertion, or pressure <a ~ laugh>

-- forced*ly (adverb)

Note that the first definition states that in order for something to be
"forced" upon something or someone, it must be an INVOLUNTARY
act. Obtaining an amateur radio license is strictly a VOLUNTARY
act. Therefore, there is no way it can be "forced" upon an individual.
The FCC does not send agents into the field, gather up unsuspecting
citizens, and hold their families hostage at gunpoint while they study
and take examinations to become licensed radio amateurs.

Your insistence that hams are "forced" to take Morse code (or any
other) tests is pure bovine fecal effluvium. Enjoy the stink.

>passed the 13wpm exam a month before and he assumed that I had
>not forgotten the code over the last month.

That violated the procedure of that time. No credit was allowed back then for exam elements passed which did not result in a license or upgrade. In the mail-order-exam methods then used, if an applicant passed the code but failed the written, the whole process was supposed to start all over again. The volunteer examiner (no capitals) was not allowed to use his/her "judgement" on the matter.

Of course those rules no longer apply.

> The posting was designed
>to get your dander up and it certainly did.

Which means it might be a true story. Or it might be a tall tale, or it might be anything in between. The other people involved are probably not available to back up Cecil's story, or wouldn't remember it. I doubt very much that the FCC cares, because 5 wpm is all that's required now, and Cecil says he passed 5 wpm at an FCC office.

Note that Cecil wrote: "Here's what I said in the original". He doesn't say the story is what actually happened, only that it's what he wrote. That difference leaves him an escape hatch a mile wide.

Cecil doesn't like being called a yankee. He prefers being the yanker.

That's true Jim, and is unrelated to the question of whether a Morse code requirement is a good thing or not. Requirements are required by circumstances. The circumstances are the FCC rules. In return for certain privileges, the government forces citizens to meet the requirements. That's what governments do.

That's one definition of "forced", Larry. That is NOT the definition
that I am using.

> Obtaining an amateur radio license is strictly a VOLUNTARY
> act. Therefore, there is no way it can be "forced" upon an individual.

STRAW MAN ALERT NOBODY has said that an amateur radio license
is forced on ANYBODY. Please stop repeating that falsehood.

In return for granting certain privileges to citizens, the government
requirements must be met. Those requirements are required by circumstances
existing at the FCC. "Required by circumstances" is the dictionary
definition of "forced". In return for certain privileges, the government
forces citizens to meet certain requirements. That's what governments do.
It doesn't matter if you feel good or bad about it. Either way, in return
for the privileges granted, you are forced to meet the requirements.

> The FCC does not send agents into the field, gather up unsuspecting
> citizens, and hold their families hostage at gunpoint while they study
> and take examinations to become licensed radio amateurs.

Why do you insist on repeating such nonsense. NOBODY has said that
anything like that happens. Please stop the diversions and come
back to the subject.

> Your insistence that hams are "forced" to take Morse code (or any
> other) tests is pure bovine fecal effluvium. Enjoy the stink.

Larry, you yourself, have admitted in the past that your Morse code
skill was produced only with considerable effort. "Produced with
effort" is your very own definition of "forced" above. Therefore, you
have already admitted that you were "forced" to meet the Morse
code requirements. Denying it now is ridiculous.

Yep, and that's why I posted it. At the time, Dick was being adamant on procedures. I wanted to yank his chain. Three years later, he's still stewing about it. :-)

The two Madisonville, TX hams were neighbors and good friends.
Milton had a 78rpm code record which he used to test my 13wpm ability.
Shorty had no way to send audible Morse code and no way to judge its speed. He asked Milton about my Morse code ability and he said I passed with flying colors. Shorty accepted the previous 78rpm record code test as being superior to any test that he could come up with.

That was 50 years ago. Both hams are SK now.

One factor which hasn't been discussed here is HF skip propagation,
which often shows that apparent interference is not. Often you can hear
two stations who can't hear each other. So if one can't hear a station
on the frequency, he can't deliberately interfere with hi. Happens all
the time, and I'm sure FCC monitoring takes it into accouont.

That's exactly what you've been saying three times a day for the last three weeks. And you've been denying saying it almost as often.

You're nothing but an ache in the posterior.

Obtaining something by methodology of applying one's self to a task is NOT being "forced" under ANYONE'S definition.

Of course I see where Cecil is taking this, and I could respond that under such application of the definition "forced" we could also say we are "forced" to breathe, "forced" to eat ot "forced" to sleep.

The application of "forced" in those examples is ludicrous.

It took me some "effort" to overcome the 10wpm threshold too, but I was HARDLY forced to do it. I WANTED to do it in order to obtain the attached priviledges.

Absolutely TOO Liberterian, Cecil. Some common sense would be appropriate at this juncture.

Dick, please sober up enough to understand what I have been saying.
Nobody forces anyone to become an amateur radio operator. But in
return for granting amateur radio privileges, the government forces
citizens to meet the amateur radio requirements. Therefore, anyone
who has an amateur radio license was forced by the government to
meet the requirements for an amateur radio license. That's what
governments do.

It doesn't matter if you wanted to do it or not, Steve. The requirements are exactly the same whether you wanted to do it or not. In return for amateur radio privileges, citizens are required by circumstances (forced) to meet the governmental requirements. That's what governments do.

In return for certain privileges, governments force citizens to meet the necessary requirements. Dick apparently obtained his privileges through fraud because he says he was never required by circumstances to pass any of the amateur radio requirements.

>Four, deliberate interference is deliberate interference --

I think the crux of this argument is understanding the government's definition of "interference." Go to www.access.gpo.gov and pull up the Code of Federal Regulations, Title 47 (Telecommunications), Chapter 1 (Federal Communications Commission), Part 2A (Terminology), Section 2.1 (Terms and Definitions). You'll see that interference can only be done to a "radiocommunication system." The question you need to pose is this: Do out-banders, operating in an illegal manner, constitute a "radiocommunication system"? (Of course, that begs the question of how such a system is defined; no definition in S2.1 is given.) 73, Jeff KH6O

Hi Cecil -- I think you're subtly reversing the roles of cause and affect. A more accurate view of this is that in exchange of a citizen voluntarily meeting certain requirements, the government grants various privileges; if a citizen doesn't meet said voluntary requirements, either through choice or neglect, no privileges are issued.

Jeff:

The point that Cecil is trying to make, and won't own up to, is that government imposed amateur radio licensing requirements are inherently evil since they "force" people to do things that stand in the way of their personal happiness and fulfillment. It's just another version of the usual no-coder whine, that's all. Cecil would claim to object to FCC licensing requirements on libertarian grounds, but in reality, its just more whining from a person who is a moral weakling, and an apologist for whining no-coders.

Don't you mean "cause and effect", Jeff?

Aha, the Stockholm syndrome again. It doesn't matter whether you feel
good or bad about it. If you want or need privileges that the government
grants, you are required by circumstances (forced) to meet the requirements.
That's what governments do. The goal is not to meet the requirements. The
goal is to gain the privileges. Seems you are the one who is mixing up
cause and effect. Nobody goes around "voluntarily meeting certain
requirements" without a goal in mind.

Please stop the mind-fornicating, Larry. I never, never said or implied
that it was evil. Seems if you cannot deal with the truth, you choose to
start telling lies and setting up straw men.

You have already admitted that your Morse code skill was produced with
effort. "Produced with effort" is your dictionary's definition of
"forced". The fact that you felt good about being required by
circumstances (forced) to meet the requirements is irrelevant. It
doesn't mater whether you felt good or bad or indifferent about it.
In return for amateur radio privileges, you were still forced to meet
the requirements.

It's the old "camel's nose in the tent" thing. You give up one frequency to illegal operation, and pretty soon that one won't be adequate and they will take another. And another. Pretty soon the band will be full of them. And they will view themselves as having "squatter's rights" and will be much harder to dislodge.

I had never seen a 33-1/3 rpm record in 1951. Milton's record player
didn't play 33-1/3 rpm or even 45 rpm. It only had one speed.

> Real hotbed of skilled highspeed Morse ops, that Madisonville.

That was before built-in side tones. Generally, the mute switch
was thrown on the receiver. I never had a sidetone until years
later. I sent code by listening to the clicks made by my hand
key and knowing which clicks were 'dit' clicks and which were
'dah' clicks. I can still send good handkey code without hearing
a side tone.

> >Shorty accepted the previous 78rpm record

I know that the ID on a REPEATER is limited to 20wpm. I also know that ID during a CW qso is not limited in speed. How about using a CW ID during a voice QSO every 10 minutes for the regs. Is there a limitation to the speed of a CW id in that instance? I can't find any reference in the regs.

thanks

The problem is the FCC isn't dealing with them and 28.085 isn't the only frequency they are using. Truckers can be found on a number of frequencies, 28.305 is also becoming popular and I have heard them up above 28.5. Unless the hams make it hard for them to communicate on 10 meters, they will just keep using it in bigger numbers and you won't have those 1,695 KHz any more.

I would hold it to 20. Beyond that there may be a question of intent.
Besides what's the practical diff between taking 3 seconds at 20 or two
seconds at 30?

That's how the non-licensed MURS was carved out of the licensed
Business Radio Service, and how the upper 17 CB channels came
about.

Consider the following:

Both Section 2.1 of the FCC Rules and Section 333 of the
Communications Act refer to harmful interference to authorized
communications.

HOWEVER, Section 97.101(d) of the Rules specifiy that no
amateur radio operator may cause interference to ANY (notice
that word) communications.

This difference is why lawyers get into pizza contests.

97.119 says:

(b) The call sign must be transmitted with an emission authorized for the
transmitting channel in one of the following ways:

(1) By a CW emission. When keyed by an automatic device used only for
identification, the speed must not exceed 20 words per minute;

I think I'd read that to mean that if you are only sending CW for
identification, and you aren't keying it by hand, you need to limit
it to 20 wpm. There are other ways to read it, I guess, but that
seems to be the most conservative.

[After reading some other replies....]

If you can manually key your ID at 75wpm, go for it!

Remember, if your transmitter ID's for you, you don't have to. I find that convenient when working on a repeater at its site - just pick up the "god mike" (as one of my friends calls it) and talk. The machine ID's - and since that's the only transmitter, I don't have to. (Remember that when most users are using a repeater, their ID is for their HT or mobile radio's transmitter, not their repeated signal).

>>given.)

>Consider the following:
>Both Section 2.1 of the FCC Rules and Section 333 of the
>Communications Act refer to harmful interference to authorized
>communications.

And our Part 97 (S97.3) states that "harmful interference" can only
be done to a "radiocommunication service operating in accordance with
the Radio Regulations." Thus, no harmful interference is being wrought
upon the outlaw operators on 10m; they are not part of any service.

>HOWEVER, Section 97.101(d) of the Rules specifiy that no
>amateur radio operator may cause interference to ANY (notice
>that word) communications.

But are these outlaws, who are operating in an illegal manner,
conducting "communications" as legally defined by the government?
No, they are not, so S97.101(d) is not being violated.

Simple Better idea:

Move Citizens Band usuage to 380 MHZ (UHF NTIA FREQ NOW) but could be
reallocated quite simply. 12.5 khz spacing, 200 Channels with power
upto
1/20/50 watts and repeaters. License the things quite simply-You could
acquire
your licnese at your nearby friendly POST OFFICE for the princely sum of
$20.00, just fill out the form, hand over the money and your call is
the serial number on the top (w-12345678) and voila, off you go!

Everybodys happy,

Just one little detail, program the call into the radio before usuage,
license is good for 10 yrs and off you go!

Kevin:

I'm pretty sure the maximum speed for a CW ID of 20 wpm applies to
ANY automatic CW ID in ANY mode. IOW, you could *manually*
key as fast as you like, but if the ID is an automated circuit, the
maximum QRQ is 20 WPM. I'm too lazy to go thru my rulebook
this late at night, but I recall having responded to this question in the
past, and recall that the answer 20 WPM, max.

Phil Kane -- please weigh in on this issue, if you haven't already!

Nice touch! I suspect we are going to need that space soon to hold the S
and T band stuff that will almost have to get removed to get TV into a
neat little box. I did not use standard spacing because it made PLL
fiddling too easy.

My reasoning on using 27 was to use existing antennas simply because the cab is quickly filling with other wonderous electronics. Also I am not entirely sure what a 45 foot metal box does to UHF. ANI might not be politically salable but it makes a fine concept.

I had toyed with using a D/L number with a W in front but some states exceed the digits in the national debt. Besides, why give info for free.

The whole idea hinges on whether the encroachment is in fact a product of trying to get away from skip shooting. If that is the case, then some idea along this line works; if not, kaputski.

When a university puts in a new building it has to connect it to existing paths. It can specify them and plant land mines in paths the students build outside of them or it can provide a few obvious and basic paths and then pave what the students create in a couple of years. Kind of a choice between aesthetics at great cost and a much cheaper practical if not beautiful solution.

Sounds great from a bureaucratic regulatory standpoint, but it does not
much to move all those millions of transcievers off 27-28 mz. And they
AIN'T goin' just because Sam said so.

Heck Dick, at 14, I was ignorant of the rules. If fraud was committed
it wasn't I who committed it. I'm still not sure what was done was against
the rules. I never saw and don't know the exact wording of the paper
signed by W5OLV when I passed my Conditional exam. I was ready and
willing to take another code exam like the one I had taken a month before.
Shorty just had no way to generate Morse code audio.

When I was in high school, I was also guilty of shooting doves out of
season with my BB gun. We can't all be perfect like you have been all
of your life.

Good Grief! How hard could it have been to key the oscillator with the other transmitter stages shut off and copy the sidetone from it in the station receiver? How did you guys 'spot' a frequency, anyway?
As Jim said, Madisonville sure wasn't a hotbed of CW activity.

> I never had a sidetone until years
> later.

I sure did, even with the old Command receiver. I used a double pole double throw knife switch to switch the antenna from receive to transmit. It grounded the antenna port of the receiver when on transmit, and that gave just about the right amount of my transmitted signal for the receive sidetone without overloading it.

What speed was that?
>
>> Real hotbed of skilled highspeed Morse ops, that Madisonville.
>
>That was before built-in side tones.

I didn't have a built-in sidetone in a rig until 1983.

>Generally, the mute switch
>was thrown on the receiver.

Not by hams who knew better.

>I never had a sidetone until years
>later.

We're talking about the code test. For a test, the transmitter could be
operated into a dummy load at minimum power, and the receiver operated at low
gain with no antenna connected.

>I sent code by listening to the clicks made by my hand
>key and knowing which clicks were 'dit' clicks and which were
>'dah' clicks. I can still send good handkey code without hearing
>a side tone.

I did the same for a short time, at the very beginning. Then I learned to
listen to the rise and fall of the power transformer hum.
>
My 1948 ARRL Handbook shows several lowcost methods of adding a sidetone to
almost any rig. There's the code-practice-oscillator-in-parallel-with-the-key
trick, the neon-bulb relaxation oscillator, and a few others. My favorite is to
mute the receiver by opening the grounded end of the RF gain control and
inserting another potentiometer. The added pot is shorted out on receive. It
gives a variable mute level so you can hear your own signal if the receiver is
tuned anywhere near the transmit frequency.

>> >Shorty accepted the previous 78rpm record
>> >code test as being superior to any test that he could come up with.

If he couldn't do any of the above, he wasn't qualified to give the test at all. Accepting the previous "record test" was a violation of FCC rules. In addition, it was possible that you memorized the record. After all, you've often told us of your photographic memory, Cecil.
>>
>> Even though it was not acceptable by FCC standards of the time.

Child's play, Dick. Slap a pile of error correcting, frequency hopping,
digital data transmissions on those frequencies, and people will not be able
to give away a CB radio in a few months.

So the FCC should violate their own rules by massive intentional
jamming? That won't happen. They'd be more likely to just legalize it
all first.

Please tell me where I can down load rules and forms for renewing my
general license
I have been inactive for quite a while but want to maintain my
operator and statiojn licences.
Thanks

You obviously have a computer and can figure out how to post a
message to a newsgripe. If you can't figure out how to find information
on how to renew your general ticket, then please don't bother! You
don't deserve it!

Dick:

That's not the point. A regulated, licensed version of CB, on a skip-free
VHF or UHF frequency allocation, would restore the utility of such a
service to serious users who want to be free of the "country culture"
and general mayhem of 27 MHz. LET the present day denizens of
11-meters stay there. I want to see a Personal Communications
Service for motorists, truckers, and small businessmen that is
everything CB was supposed to be if it wern't placed on an HF
frequency allocation that propagates worldwide.

Point of order: A $20 fee for 10 years isn't enough. License fees should
be enough to ensure adequate enforcement of the rules of the new
service. Users should be suspended for a period of time even for
comparatively minor infractions such as failure to identify on time or
using "unprofessional" language on-the-air. Operating during a
suspension results in losing all privileges for 3 years, minimum. Let's
control this thing, and give the users a proper fear of the enforcers.
CB was turned to crap because the FCC gave up on it. If we start
a new service, we must not repeat this mistake, or the permanent
loss of even more valuable spectrum would result.

Cecil:

I agree. I also believe that there are certain things that the federal
govermnemt simply must control for the good of all -- and finite
resources, such as the RF spectrum, is a perfect example. Therefore,
government regulation of amateur radio -- including a provision for
multi-tiered Morse code exams up to 20 WPM, makes good sense
to me. It ensures that only the people most likely to go along with
the rules and regulations get to become full-privilege operators, and
ensures that our most practical, effective, efficient, and universal
mode of non-voice communications remains available for use as a
backup to more advanced, digital modes. Of course, this logic
escapes the no-coders, who are concerned only with their personal
ease of entry into the ARS. Such a lazy and selfish attitude now
permeates our culture, to the detriment of us all.

Actually, I just remembered that shooting Doves out of season with my BB
gun was done in grammar school. I used a pellet gun while in high school.
And I've never figured out why it should ever be illegal to shoot a couple
of Doves for supper on my Dad's property. My Dad certainly liked Doves
better than Meadow Larks.

Maybe so, but I didn't read them. Shorty told me what to do and I
did it.

> As you described it, it was against the rules of the time. If it really
> happened that way, of course.

Actually, I just read those rules and the person who gave the code exam
and the person who gave the written exam didn't have to be the same
person. The person who gave the written exam didn't even have to be
a ham.

> No CW receiver? No key? No buzzer?

No buzzer and the receiver was muted during transmit. Shorty
would have had to put a one-way signal on the air which was
probably illegal. I wasn't licensed at the time.

> A tone of regret for past transgressions, perhaps?

I regret shooting doves with a BB gun but not because it was
illegal.

It was a Xtal controlled Harvey Wells. I don't think it keyed the
oscillator. It might have cathode keyed the final. Wouldn't a one-
way broadcast of a Morse code test session have been illegal?

Nobody had a dummy load and there was no power control on the transmitter.
The receiver was automatically muted during transmit. One-way transmissions
were prohibited.

> AH HAH!!! So you DO agree that it was a violation!!! ;-)

Actually, I haven't told the whole story. Shorty started the Morse code
exam by keying his VFO and it blew up after 16 characters. I copied those
16 characters perfectly. They were, "The Conditional Cl".

You can add to my list of "violations" when I was 14 that I played doctor
with my 12 year old sister. I still feel guilty about that one.

>have to pay just as much fine, or more, than if he had gone ahead and
>mailed it in. Nothin' says the judge has to stick with the published
>fine schedule if he finds reason not to....

It depends on the state and the system.

>you standing there arguing
>how innocent you are might do it.

I wouldn't argue inncoence or guilt, I'd simply not the state
had failed to suficently prove its case based on such a
minimal speed diferential. The other possibility is that
the prosecutor may not even want to pursue such a case
to avoid wasting time. Practicallity does enter the
equation when dealing with attorney's time.

Cheers,
Bill K2UNK

I thought it was a crystal-controlled Harvey Wells...

> I copied those
>16 characters perfectly. They were, "The Conditional Cl".

You needed 65 consecutive characters correct back then.

Another solution was to tune in a station sending 13 per or faster and have you
copy it.

The old regs required that one pass all of the elements for a particular
license in sequence with no failures. You didn't even get a glance at the
written until the code was passed, too. Passing the code and failing the
written for a license or upgrade that required both meant you had to start all

over again. FCC examiner or by mail, it made no difference.

Of course, none of that matters at all now. 5 per is the only code test, and you passed that one at the FCC office.

--

A former Navy radioman certified at 60 wpm but with no FCC license still had to pass the code and written tests for a ham license. And if he missed the written by even one question, it was "try again in 30 days" - ALL of it. Even if he'd known the FCC examiner all his life, had a Ph.D in EE, etc., etc. Same rules for everybody.

governments do.

Argue YOUR application of "forced" all you want, Cecil. All of life
requires effort of one kind or another. If you consider yourself "forced",
then you were forced. I have no doubt that you consider yourself victimized by
a great many aspects of life, Cecil.

There are those who "do it" and those who WHINE about "doing it".

>In return for certain privileges, governments force citizens to meet the
>necessary requirements.

The purpose of government is to provide for the mutual benefit of those
whom it serves. The electromagnetic spectrum is a finite and highly valuable
resource.

Furthermore, it's abuse by even one person can have grossly disasterous
results to countless others. That the government requires some demonstration
of knowledge in order to minimize that possibility is fundamentally sound
application of governmental powers.

>Dick apparently obtained his privileges through
>fraud because he says he was never required by circumstances to >pass any of
the amateur radio requirements.

Light bulbs radiate RF. Someone reported a QSO on one. Doesn't seem
reasonable to violate one regulation in order to meet another one.

> >Shorty started the Morse code
> >exam by keying his VFO and it blew up after 16 characters.
>
> I thought it was a crystal-controlled Harvey Wells...

It *was* after he blew up his VFO. He didn't want to risk blowing up his
transmitter also. There didn't seem to be any way to reduce power without
increasing dissipation in the final.

> Passing the code and failing the
> written for a license or upgrade that required both meant you had to start all
> over again.

Madisonville hams apparently issued CSCEs. ;-) For all I know, there's
a possibility that Shorty could have corrected my written exam before
he sent it in. I wasn't sure that I had passed it.

Has anyone even hinted at doing that?

>Agreed, the worst we could do to ourselves would be to take it down to
>their level. I've heard hams fire up ssb below the phone band and
>screech at freebanders, nice example of the pot calling the kettle
>black.

Did they ID? If not, how do you know they were licensed hams? No speculation permitted -- either you can prove they were amateurs, or you should retract that allegation. Any of them saying "This is a ham band -- get lost," doesn't prove they themselves are licensed amateurs.

>Personally, I ignore 'em, they don't bother me,

The same could be said of the illegals crossing the border from Mexico; they certainly don't bother me out here in Hawaii, but regardless, I'm all for plugging the holes in the border and even back the landowners who conduct citizens' arrests on those criminals; would you refer to those landowners as vigilantes?

>10m is no place for
>vigilante operations by The Righteous. If they do get in the way just
>politely run over 'em.

From what I read, that's exactly what's being done.

The fact remains that ***ALL*** amateur radio operators are required by
circumstances (forced) to meet the requirements for an amateur radio
operator's license. It doesn't matter how you felt about it. "Required
by circumstances" is the dictionary definition of "forced". You were,
by definition, forced to meet the requirements of an amateur radio
license in return for the amateur radio privileges granted to you.

> If you consider yourself "forced",
> then you were forced. I have no doubt that you consider yourself victimized by
> a great many aspects of life, Cecil.

I'm NOT a victim, Steve. In this life, I have been lucky beyond my wildest
dreams. The requirements for an amateur radio license are required by
circumstances (forced) on ***ALL*** citizens who are granted amateur radio
license privileges. That's just what governments do.

> The purpose of government is to provide for the mutual benefit of those

Ahhhh, but saying that he was never required by circumstances to pass any of
the amateur radio requirements means that he didn't meet those requirements.
ALL amateur radio operators who received their licenses legally were
required by circumstances (forced) to meet the requirements before their
amateur radio privileges were granted to them. That's what governments do.

You're confusing cause and affect again, Cecil. Your statement
should instead read, "In return for amateur radio privileges,
citizens voluntarily meet the governmental requirements.

In 1976, I *voluntarily* took on a course of self-study to learn
about RF electronics, code, and the rules and regs; at any time
I could have quit -- no one forced me to continue. When I felt
ready, I *voluntarily* drove to the FCC's San Francisco office
to fill out an application; at any time I could have walked
out -- no one forced me to stay. I was then asked to proceed
into the testing room and I *voluntarily* went in; at any time
I could have walked out -- no one forced me to into that room.
Then the tests were administered; I *voluntarily* picked up
a pencil -- at any time I could have left -- no one forced to
me stay. Even after having been told that I passed, I could
have *voluntarily* left without completing the final paperwork.
At no time did I feel forced -- I *voluntarily* completed
each step of the process, and in return for my *voluntary*
cooperation, I was awarded a General class license. I never
perceived any force at any stage of the process.

>>
>Are you suggesting that we intentionally jam them as a mattter of
>policy and/or as an acceptable and proper operating practice?

Heck no!!

See K0HB's post and my reply for a half-dozen reasons why jamming is a bad idea.

Here's a worst-case scenario for ya: Coupla truckers are trying to use 28.085 and they get jammed by hams. They don't know their use is illegal - there's no license or test for cb, and they think they are in the right.

Now suppose an accident happens (say, a trailer-tire blowout that results in the load shifting) and it turns out that one trucker was trying to warn the other of the hazard, but couldn't do so because of the jamming. Suppose the accident results in fatalities, injuries and serious property damage. And suppose the FCC has tapes of the whole thing. How do you think that would play on the six oclock news?

What I'm suggesting is that if we keep those frequencies busy with amateur QSOs BEFORE the pirates ever show up, they will go elsewhere. And if we tape and report the intrusions to the FCC, there may be action taken.

But if the tapes show the pirates being jammed, the action taken may not be to our liking.

Then WHY do you insist on stressing "forced"...??? I think you ARE a victim...a victim of your own disatisfaction, ergo your need to insist that everyone is "forced", regardless of THIER perception of the circumstances.

>You are making my argument for me.

Hardly. YOU define "forced" as you will. You insist that Amateurs (therefore include me since there was no caveat to the contrary) were "forced" to do these things to become licensed.

As do all Liberterians, you dangle that spectre of "evil government" in front of everyone as if there was no government AT ALL, then we'd all be better off for it.

In a utopian world, that might be true. On THIS planet, "it ain't a happen' thing". Even in the most ancient and tribal of societies there exists some form of authortarian structure, and that structure exisits for good reason.

That you don't accept it is apparent, but that you don't accept it does not prevent it from being true.

>That's what governments do.

Thankfully in this country, for the most part, the government does what we tell it to do.

That's what PEOPLE do.

Of course that isn't really possible, given the typical conditions on
10 meters. Most of the time they won't hear any intereference at all and
hams won't hear them, when the sunspots recede again.
And there's a lot of real estate to occupy on lower 10 meters.

Dick

> all first.

No, my comment assumes the current CB frequencies would be reallocated for a use other then CB first (the data transmissions, for example). Since CB would no longer be legal on those frequencies (moved elsewhere), it would not be jamming.

The intent of my data transmissions example was an acknowledgement that some CB'ers will not leave those frequencies even if those frequencies were reallocated to another service. Frequency hopping, error correcting, digital data transmissions would not be bothered much by the occasional illegal CB operator still using those freqeuncies, and the noise from those transmissions would eventually push the remaining operators off those frequencies.

Now, I'm not suggesting the FCC intends to do this, nor am I specifically advocating it. I'm just presenting one possible solution to your "they AIN'T goin' just because Sam said so" comment.

I think you're being shortsighted, Brian. In my opinion, it's only a matter of time. Twenty years ago, CB radios with the capability of also operating on the 10 meter ham band were extremely rare. Ten years ago, radios with that capability were widely available (in even the smallest towns). And its only been in the last few years that a significant number of CB'ers have dared to use the 10 meter ham frequencies.

If that trend continues, in just a few more years, use of those frequencies by CB'ers will become as commonplace as the radios now with that capability. If we want to prevent that, I agree with N2EY that we have to address this problem now, before it gets out of control.

Steve Robeson wrote:
> Then WHY do you insist on stressing "forced"...???

I'm not stressing "forced". It's just happens to be the English
language word that I am using. That you object to a common English
word is irrelevant. Laws, rules, and regulations cannot succeed
without governmental FORCE behind them.

> Hardly. YOU define "forced" as you will.

Nope, not as I will - simply as the dictionary says I should. The question
is, why do you reject the dictionary definitions of words?

> As do all Liberterians, you dangle that spectre of "evil government" in
> front of everyone as if there was no government AT ALL, then we'd all be better
> off for it.

STRAW MAN ALERT I did no such thing. A couple of postings ago I said
that government was superior to anarchy. Why must you lie about what I said?
I believe any citizen should be forced to meet the requirements before being
granted the privileges. If you don't believe that then you believe that
some citizens should be granted the privileges without being forced to
meet the requirements. That's not fair, Steve.

> Even in the most ancient and tribal of societies there exists
> some form of authortarian structure, and that structure exisits for good
> reason.

That "authoritarian structure" is what FORCES citizens to obey the laws,
rules, and regulations, Steve. You are making my argument for me.

In order for citizens to obtain the privileges granted by government, they
are forced to meet the requirements for those privileges. That is indeed an
authoritarian structure and it indeed does exist for good reason. An
"authoritarian structure" cannot exist without force to back it up. Why
is that so hard for you to admit and accept?

If shooting the doves with a BB gun wasn't illegal, and you ate
the doves you shot, why would you regret it? I sure don't regret
shooting destructive crows in a cornfield with my Winchester
rifle.

Bert:

This is not amateur radio; it's Usenet. If you don't know the difference, you'd may as well turn your ham ticket also -- assuming you have one.

Amateur radio is not for technically inept idiots who "just wanna talk on the radio." It is for reasonably intelligent people who are curious, ingenious, and willing to learn and discover and their own. I think we've taken the concept of "Elmering" way too far. We're no longer pointing the way, we're now telling prospective hams which button to push and when to push it, and not holding them responsible for so much as reading a few pages out of an equipment owner's manual written in what used to be third-grade English (but now is probably college level). Our society is dumbed-down, our hobby is dumbed-down, and I, for one, am sick of it!

Anyone who can get on the internet and post a message to a Usenet newsgroup should be able to figure out how to plug a few keywords into a web browser and get back plenty of information about virtually anything concerning amateur radio. I do not apologize for my response -- I just pity that poor dumbed-down jerk, but don't see any need for him to keep up the pretense of being a licensed radio amateur.

Now Cecil is going to ask a smart-assed rhetorical question about his Technician-class Ph. D. friend.

You are still confused, Jeff. It is "cause and EFFECT", not affect.

"Affect", as a noun, means "the conscious subjective aspect of an
emotion considered apart from bodily changes". Seems, when it comes
to this particular subject, you are indeed suffering from an affect.

It doesn't matter how amateur radio operators feel about being forced
to meet the requirements. Every citizen who is granted amateur radio
privileges (effect) is forced to meet the requirements (cause) - no
exceptions. The requirements are the cause. Without the requirements,
citizens would not be forced to meet them. Citizens can volunteer to
become CB operators. They cannot just volunteer to become amateur
radio operators. They are first forced to meet the requirements (cause)
for amateur radio privileges (effect).

> In 1976, I *voluntarily* took on a course of self-study to learn
> about RF electronics, code, and the rules and regs; at any time
> I could have quit -- no one forced me to continue.

If it wasn't a requirement then you are correct.

> When I felt
> ready, I *voluntarily* drove to the FCC's San Francisco office
> to fill out an application; at any time I could have walked

> At no time did I feel forced -- I *voluntarily* completed
> each step of the process, and in return for my *voluntary*
> cooperation, I was awarded a General class license. I never
> perceived any force at any stage of the process.

Your perceptions are irrelevant, Jeff. That you didn't
mind being forced to meet the requirements is irrelevant. In
order to obtain amateur radio privileges, you were forced to
meet the requirements for an amateur radio license. Those acts
you performed were NOT OPTIONAL!!! You had no choice. If you were
to become an amateur radio operator, you absolutely were forced
to meet the same requirements as any other citizen. You cannot
just volunteer to be an amateur radio operator. You are first
forced to meet the requirements.

In exchange for certain privileges (effect), governments force
their citizens to meet certain requirements (cause). That's what
governments do.

I left CB radio 19 years ago when I got my novice ticket. It felt good communicating with people that knew what they were doing and were proud of their accomplishments in getting licensed. Over the past year things have gotten shitty on the bands and operators are stupid. It sounds just like the CB I left 20 years ago except that the rig's readout is showing a ham frequency. To bad there isn't a better radio service I can go to now that the bands are full of idiots. Thanks FCC, Thanks ARRL, I'm back to 11 meters in the middle of a ham band.

Broadcasting is not prohibited for amateurs if the material broadcast is of
primary interest to the amateur radio community. Code practice and bulletins by
hams have been perfectly legal since the very beginning.

This tale gets taller with each telling.

Back in 1967, when I went to my volunteer examiner, I brought along my key and
homebrew code practice oscillator. Wasn't going to take a chance on any
unknowns.

Sure you did. The fact that you posted this message to nine newsgroups, used a fake identification, and made numerious false statements about ham radio, clearly shows this as an attempt to stir up trouble instead of voicing an honest complaint. If you want to stir up trouble, try not being so transparent next time. Until then, you rate less than a one on the old troll-o-meter.

Who said, Larry? That may be your idea what ham radio is, but you're not the one who decides such matters (and I see no requirement in the FCC rules that says a ham must be "curious, ingenious, and willing to learn and discover on their own").

> We're no longer pointing the way, we're now

He didn't ask about anything in his owner's manual, Larry. He asked where he could download the rules and forms to renew his license. Since he's been "inactive for quite a while," he is probably not aware that the FCC now maintains a site for ham operators, and has most of it's forms online (he is going to be really thrilled when he discovers the Universal Licensing System).

Gee, it must be frustrating to be as intellegent as you think you are, especially in a world filled with so many "dumbed-down" jerks. You sound like a bitter old man when you say crap like this, Larry. When you get in one of these moods, you need to remind yourself to climb down off that self-rightious pedestal and stop acting like a pompus ass. Because, believe me, what you're saying now says far more about your intellegence than what he said says about his.

Freebanders were using 300 watt 125% plate modulated Johnson Viking
Valiant boomers and Collins 75A series rcvrs (among many others) on
the 11 & 10 meter bands back in the CB craze days of the 70s. This
crap did not start yesterday. I'd sure as hell rather have to work
thru or around one of their current weenie diode-snipped Radio Slack
ssb xcvrs than the beasts the illegals had back then.

Have fun "addressing", you can take up my slack. The 10m illegals are
a minor annoyance, they are not a hand-wringing threat to ham radio or
even the 10m band. It's a matter of being realistic, getting 'em off
10m is entirely in the hands of the FCC and we all know where that
leaves us.

The rules of that time were arbitrary and the standards were not
lowered for me. Shorty already had knowledge of my code ability.
I know of a number of hams who signed off on code ability based on
on-the-air QSOs performed at 13wpm or higher by novices while the
examining ham listened in.

> >Shorty knew that
> >I had not forgotten Morse code in one month.
>
> How did he know that without a valid test? You were off the air.

Shorty had heard me on the air as little as two months previously.
Milton told him that I passed 13wpm with flying colors only one
month before. No healthy person forgets Morse code in one month.
It was a victimless crime with no harm done.

Could you please take your comments to another place. Some one spent some time cleaning this NG up and it would be a shame for all that work to go down the drain.
Thank You
Chet Woods

Hey Bert,

Check out www.sugardelta.com, holy smoke! What a gorgeous 11 meter site. I'm glad to see the organizational skills rising among the 11 meter DX groups.

Let me know how you like that Alinco. Programming it is not all that much fun, but it's a solid little performer. I have an Alinco DX-77 too and I must say, they make reallty quality gear. Take care.

Actually Dwight, the fact that Larry here is using AOL as his ISP
speaks more about HIS intelligence and technical expertise than
anything he could post... Of course, the fact that he composes
newsgroup posts on Word 97 and then pastes them into his AOL
newsreader window instead of just keeping a dictionary near his
computer indicates quite a bit about his level of common sense as
well.

I think your points are valid, but it would've taken the same amount of effort(or less) on your part to kindly point him in the right direction. In other words, it wasn't the content, but rather the delivery.

I know this is usenet and not AR but it's a usenet group about AR, comprised primarily of ARO's who could be setting a good example for those who are considering becoming an ARO. I may check my callsign at the door when using usenet, but certainly not my manners. I didn't learn decent etiquette from a technical resourse, mom and dad taught me that. 73 and good day.

Well, more like FT 1000MPs. You don't have to have a license to buy one.
Many of the rigs being used for mobile CB nowadays go up through 2 meters
and even 440. It wouldn't take too much figuring out that VHF/UHF FM sounds
much better than 10 meter AM along the highways.

Cmon Larry, if you used a *real* news reader (with a built in spell
checker), you wouldn't have to go through all those cutting and
pasting hoops. Is it beyond your technical ability to run something
besides AOL... :-)

Then you need to get a new meter. His meter detected a troll, period. Don't you think that something as dumb as a meter would register a 10 on, as you say, something as transparent as "ARRL's" post? Also, try using your spell check. When a person flames another but in the process misspells a simple word as "generous", they tend to lose all credibility.

Isn't it illegal to refuse service to an individual based on race
or color? Speaking of which, I saw on the Discovery Channel where
a hundred thousand years ago, there were six different species
of man (hominoids) in competition with each other. Can you imagine
how complicated our laws would have been if all of those species
had survived instead of just the meanest one?

Daily. It's a mess out here in the Central Pacific, having been overrun by Philippino, Malaysian, and Indonesian taxi cabs and fishing boats. Jim, KH2D, in Guam can verify that. You should come out here to see how "well" your pacifism has "worked."

>Intellectual gridlock = ON.

Now Brian, don't get abusive like Len. Your speculation would not hold up in court.

>In most cases yes. I suggest that you cut the academic-type pushups
>and tune 10m (with a radio) and come back in here with some real-world
>experience instead of coming to conclusions based on other posts.

I tune in daily hoping and praying to find an open CW frequency; none exist. 10m has been completely lost to the outlaws here in the Pacific. (My 10m "real-world" experience comes from two 10m-converted CB radios, an HTX-100, and my trusty DX-60; antennas are at 100 feet just above the Ala Wai boat harbor and consist of a vertical dipole, and a horizontal dipole oriented E-W so that its lobes are N-S.)

Larry,

>This is not amateur radio; it's Usenet. If you don't know the difference,
>you'd may as well turn your ham ticket also -- assuming you have one.

You must be kidding. The issue is not whether ANYBODY knows the difference between amateur radio and a newsgroup. The issue is a bout a mean spirited person who choose to respond in a rude and obnoxious manner rather than give a chap(ham or not...a fellow human being) a "gentle" shove in the right direction. If YOU don't know the difference, you'd may as well turn in your birth certificate - assuming YOU have one. Feels nice when people are mean, eh? That's really NOT my style, I just want you to "catch a clue."

Hey Mark,

Yeah, it's a bute, eh? They're a pretty large group now, nice to see. Check ot the software section, as a programmer; This is where I "gravitated" first...really nice. I downloaded the logging program and fiddled with it for a while, good stuff.

The Alinco's really nice. As I said, I'm a fiddler so tackling the programming isn't too bothersome. The HTX-200's ok, but just that...ok. I like the fact that I can slip it in my shirt pocket though. Later.

There is a time and a place for everything. In this particular case, it probably wasn't either. But step back a minute.

Everyone finds Yahoo. So type in 'FCC' to go the moose. You will be thoroughly confused, dismayed, chagrined and all that good stuff. Now type 'ARRL' which may or may not be helpful. This is not rocket science. Now and only now can you go the newsgripe with a clear conscience and a clear question.

Strikes me there is enough skunk shit available to smear everyone several times over. Anyone in a supervisory position eventually develops a case of the aggravated surlies in similar situations and Larry played Master Sergeant which is not all that unbelievable as he was one not that long ago.

In the long run of things a steady diet of pats on the back don't make it. There is a place for a size 13 to the buns.

Nope. Not at all. It's textbook.

>If you don't believe that then you believe that
>some citizens should be granted the privileges without being forced to
>meet the requirements. That's not fair, Steve.

Life's not fair, but I guess you knew that.

>That "authoritarian structure" is what FORCES citizens to obey the >laws,
rules, and regulations, Steve. You are making my argument for >me.

Citizens ARE the law. That's nothing I had (or could) make for you,
Cecil.

>In order for citizens to obtain the privileges granted by government, they
>are forced to meet the requirements for those privileges

OK, Cecil....You say we are forced. The only person you are fooling is
yourself, but if that's what you believe...have at it.

>An "authoritarian structure" cannot exist without force to back it up. >Why is
that so hard for you to admit and accept?

There's nothing for me to "admit and accept". You "insist" that we are
"forced" to do the things necessary to achieve what we want in life. I "accept"
it as a challenge....YOU, on the otherhand, percieve it as "forced". I still
think you consider yourself victimized.

You got it.

About seven years ago, a local REACT group asked me to sit in on a court hearing that they were going to have in a case involving a rival CB/GMRS group over who was going to handle "public service" in their area. This situation got so heated with threats and namecalling that they had each applied to the court for restraining orders against each other. I needed a good laugh at the time so I went and sat in on the hearing.

This case was heard in the court that hears domestic abuse orders, and in those cases typically one or both parties show up, sometimes with a lawyer, sometimes without, and it's almost a "done deal" by that time. These guys show up with a dozen witnesses each, complete with hats and HTs on the belt.

The judge, sensing the "uniqueness" of the case, puts it to the end of the calendar. When it was their turn, the folks on each side get up and continue the on-air and in-person bickering one against the other. Half way through the judge advised them that the court fee covered a one hour proceeding, and that if they ran ten seconds over the hour she would charge them a second fee. At the end of the hour the accusations were going on and on and on, and the judge finally said "OK. I've heard enough. I rule that each of you is restrained from dealing with the other, and if I see any of you back in here on this matter the results will be very unpleasant for all involved".

Although I don't agree with The Congress on this, I can certainly see why they don't want to spend two cents on problems involving the CB Radio Service.

200 pounds at last check.

You are correct on the automatic IDer speed in any radio
service is 20 wpm, which is the speed at which FCC enforcement
agents whose jobs include monitoring are required to qualify
although many of us could copy more.

>No, they are not, so S97.101(d) is not being violated.

These outlaws are certainly conducting communications. Just
not "authorized" communications.

Note that there is a strong distinction between "harmful
interference" which can only be caused to authorized
communications and "any interference" which doesn't have this
"authorized" qualifier.

Section 97.101(d) doesn't refer to "harmful interference",
it plainly states "any interference". If the Commish' wanted
carrier throwing and music playing to apply only to
interfering with authorized communications the term "any" in
Section 97.101(d) would have been replaced with "harmful".

Did the Commish' miss this one? My private guess it yes, they
probably did, but until it is so corrected that's the way the
rule reads.

I wouldn't want to be the pigeon who gets caught by someone
who is astute enough to pick up on this distinction and is
inclined to make it stick.

Exactly! Which is why cases are often NOT prosecuted
at all or plea'd down...the time value of the prosecutor
isn't worth the time to get the conviction.

Cheers,
Bill K2UNK

It was a joke, Jeff. There isn't a meter, and my message wasn't a flame.
And I certainly wasn't seeking "credibility" with nonsense such as this.

As for the fake meter, it isn't an on/off meter (on for troll, off for no
troll). It is a meter that rates a troll on a scale from one to ten. Since
this troll was so obvious, it simply doesn't rate very high as a troll in my

opinion.

However, since you control your own fake meter, you're free to rate the troll how you want. And I assure you that I will not hold your troll rating against you. [insert big grin here]

Which is why some US Attornies would not take our usual CB
seizure/forfeiture cases because the linears to be seized
weren't worth anything near what the dopers' Lexuses were.

Funny - my prosecutorial attitude was that I had all the time
in the world once the defendant met the threshhold of "did he
do it or did he not".

When my boss would ask "how long are you going to sit on that
case" my answer was "until we catch him with his hand in the
cookie jar". I had a monitoring tech who could literally sit
in the car for eight hours straight waiting for someone to come
on the air and not be bored at all.

Sounds like you indeed do believe that some people deserve to be granted special privileges without being forced to meet the requirements. Sorry, but I disagree. Every citizen who is granted the privileges should be forced to meet the requirements. There should be no exceptions.

> Citizens ARE the law.

Dream on, Steve. Try robbing a bank and see if you, a citizen, are the law.

Nope, I don't, Steve. That's just your straw man attempt at diverting the real issue which is: In return for certain privileges, our government forces its citizens to meet certain requirements. That's what governments do. Our government tries to be fair and enforce those requirements equally upon all citizens. Who, in your opinion, should be granted the privileges without being forced to meet the requirements?

This wasn't in Washington State, was it, Phil? Many years ago, I saw this very thing in action (it would not surprise me one bit if the parties ended up in court eventually). There were two REACT groups, fighting over the same radio turf. They were even fighting over who had the right to the virtually identical club names they had selected.

On more than one occasion, operators from each group tried to handle the same radio call, which resulted in a long fight over who had the right to handle that call (these calls usually ended up unanswered).

Whenever the two groups got together (coffee breaks were common back then), it almost always ended with an exchange of words between several members of each group. Both groups were even asked to leave one resturant when the bickering got too loud. And I heard that on one occasion the "discussion" ended with an exchange of fists between two of the individuals (though I didn't see this myself).

To make matters even worse, two groups spun off from these groups and started still two more groups (again wanting to cover the same area). I left the area right after this, so I don't know how these four REACT groups eventually got along.

I'm not trying to debate you, Larry. I'm just trying to point out how outrageous you sound when you post negative messages. First, you fail to gain any positive results from such negativity. And, second, you degrade yourself through such behavior. I've seen enough of your messages to know that you're an intellegent person, so you don't need such stupidity to get your point across.

As for the spelling checker, I ended that a very long time ago. I don't want to spend my entire time in these newsgroups, so I've simplified the process as much as possible. Since my spelling mistakes are relatively rare (often the result of quick typing), the extra step of using a spell checker was eliminated.

By the way, I'm still laughing over the "pony-tailed, multi-pierced, pot-smoking liberal" nonsense. Absolutely wrong on each point.

You know, I have never noticed that Larry uses AOL to access the internet. I seldom pay much attention to things like that. However, that may partly explain why he gets into these negative moods so often. It seems to be a relatively common thing among AOL users (perhaps resulting from the monthly bills they pay - somewhat like the PMS that some women experience on a monthly basis). :-)

Now you know, Cecil. I can't spell because all the pot I'm smoking has messed up my mind, and I can't sound out the words because the tongue ring gets in the way. Besides, being forced to spell correctly would harm my self-esteem (something every liberal knows is a bad thing). :-)

But, don't worry, I'm still calling you a liberal. Heck, even in the context of the description Larry gave of me above, you're still more of a liberal than me.

It is, Cecil, but that's not what you would be doing. You would
institute a *skills* test that would reserve choice real estate
only for those birds that can catch 20 bugs per minute on the
wing and eat 20 bugs per minute in the air. These birds would
be licensed as purple martins. Inferior birds that can only catch
and eat 13 bugs per minute would classified as sparrows and allowed
to nest in the less desireable places under the eaves. Birds
that failed that test would be classified as "no-bugs" and left
to fend for themselves in the vast open areas where the commercial
hawks roam. (It's allegory time, folks!)

Well, let's backtrack. I said every citizen should be forced to meet the
requirements before receiving the privileges granted. You disagreed. What
am I to assume from that disagreement except you think some citizens
should NOT be forced to meet the requirements before receiving the
privileges granted?

Well, Libertarians are half liberal. We are social liberals and
economic conservatives. That follows directly from believing in the
least amount of laws (increasing freedom) and the least amount of
goverment (decreasing taxpayer cost) that is necessary and sufficient.

>well.

You're talking about a process that I can do so quickly and
easily, it takes longer to explain how to do it than to *do* it.
I do the selecting, cutting, and pasting with Ctrl-key sequences;
it is much easier to take advantages of the spell-checking,
dictionary, and thesaurus functions of a fully-functional word
processor than it is to thumb thru the pages of my fairly large
and heavy Merriam-Webster hardcover dictionary -- even though
I do use it quite often.

As to using AOL as my ISP, you're wrong about that. My ISP
is Magpage.com; I only access AOL thru it. I like AOL's
newsreader because it eliminates a lot of unnecessary crap
found in other newsreaders; and besides, when accessing AOL
thru my ISP, its only 9.95/mo. for unlimited use, and gives me
access to other forums and chat rooms I've been using literally
from the beginning of AOL service (I was one of the first 1,000
customers).

Can't quite subscribe to that theory Dwight, as I pay top-notch rates
for my high bandwidth ISP, quite a bit more than the typical AOL
jockey. AOL does, however, seem to attract what may be called (with
tongue placed firmly in cheek) the lowest common demeanour.... ;)

Perhaps part of the problem is that with that approach in any other
country in the world you would be called a 'liberal'.

I often describe this position as being a 'Goldwater liberal'.
Unfortunately you have to be of a certain age to grok the meaning.

Like so many other things, the result is the product of one's assumptions
about people and the proper role of government. We both, I suspect,
harbor a similar outlook toward drugs and in doing so incur the wrath of
both the moralists and the goo-goos. Some days it don't pay to get out of
bed.

Trouble is, liberals changed their tune down through history. They
once wanted to *liberate* the masses from governmental oppression.
Now they want to use the welfare state to enslave the producers AND
to enslave the masses and breed more welfare state liberal voters.
What happens when the majority of voters are on welfare?

If one is the dispenser of loaves and fishes it is one hell of a lot easier to be re-elected. Worked for every machine politician since Tammany Hall.

There is the classic story of the man running for township road commissioner. In a speech he pointed out that his incumbent opponent had the best road in the township going right past his farm. One of the spectators, taking his thumbs out of his overalls, shouted out, " Then why in hell should we elect you. He already has HIS road."

We get the government we deserve.

After you gain a working knowledge of practical American English, come back and we will revisit the issue. Until then, I think the point is moot. YOU insist that we are FORCED to do something. I contend that no one not incarcerated is FORCED to do anything.

Just as God intended, we are creatures of free will. With that comes challenges to obtaining that which we covet, whether it is food, clothing, cars or an Amateur Radio license. If you want it, meet the challenge and move on.

Those who do, will...those who don't, won't.

It's not a conspiracy..it's life.

Isn't that disagreeing with my statement?

> YOU insist that we are FORCED to do something. I contend that no one not
> incarcerated is FORCED to do anything.

In return for privileges granted by the government, citizens are required
by circumstances to meet the requirements set by the government. "Required
by circumstances" is the dictionary definition of "forced" so amateur
radio operators are, by definition, forced to meet the amateur radio
requirements. That's what governments do, Steve. They enFORCE the
legal requirements. Please give an example of someone who voluntarily
used their free will to obtain amateur radio privileges without being
required by circumstances to meet the requirements.

> It's not a conspiracy..it's life.

Seems to me the government officials at the FCC certainly conspired to
set the requirements for an amateur radio operator's license. Those
requirements are predominately arbitrarily set by the FCC, not by
any force of nature.

"Holy birdshit, Batman!", Robin exclaimed. "The FCC is now into licensing bird house occupants, and me not having my secret Morse decoder ring handy, won't be able to qualify!"

Batman mashed on his "OnStar" button in desperation, as bootleg-jammers confounded his efforts to raise RRAP act FCC fighter, Phil Kane.

Yep. And it's the reason that there is a fine "range", say from $50
for a mailed in guilty plea to $500 for a full court hearing which is
almost sure to result in a guilty finding, unless the defendent is ready
and willing to fund a lengthy series of c involving lots of attorney
time, expert witness fees, and all that involves. Sorta like an
unwritten, unstated but no less true "You can have your day in court but
don't expect to get out of paying for it". Seen it in action for many
years.
Oh yes, court costs are separate and on top of whatever the fine is.
Defendent pays those, too.

I agree. It is also the reason that local enforcement of
CB violators won't be any sort of "high runner" with
either the local polie and/or the local prosecutors.
Too much time and effort needed to make any decent
case and to end up with what as a victory?

> Funny - my prosecutorial attitude was that I had all the time

How many non-productive days would your management
accept on a minor prospective violation?

Cheers,
Bill K2UNK

Court costs in NJ and NY can not be used as a punitive
"extra" against people that plead not-guilty. The court
costs for pleading guilty or not guilty here are the same
(about $25 for a speeding ticket).

> Oh yes, court costs are separate and on top of whatever the fine is.
>Defendent pays those, too.

That assumes the end result is a finding of guilty.
If the defendent wins there's no court costs at all.

Cheers,
Bill K2UNK

Depends on whether the "minor prospective violator"'s neighbors
were peppering the office daily with phone calls or whether The
Congressman got involved......that modulates "minor" to "major"
in a quick hurry. We never ran out of those cases, just folks
to work on them.

Someone has just got to invent a 42 hour day ... these 36 hour
days are just not long enough....

I've been to traffic court a dozen times or so. I beat the charge
all except one time and for that one, the judge reduced my
fine by 50%. It pays to go to court. The judge, wonder of wonders,
actually considers one innocent until proven guilty. He/she figures
anyone sincere enough to take time off the job to appear in court
just might be innocent. About 1/3 of the time, the officer who
gave me the ticket didn't appear in court - automatic dismissal.

What comes to mind is the ticket I got for going 120mph in the '60s.
I very carefully explained to the lady judge that the harmonics
from my 10m transmitter must have affected the radar readings.
When I finished, she said, "Mr. Moore, I haven't understood a
word you said but I don't believe a '49 Chevrolet can go 120
miles per hour. Case dismissed!" I didn't tell her about
the GMC Truck V8, Pontiac transmission, and Packard rear end
that the previous owner had installed. :-)

Yup, the IC-706 does 160 thru 70cm except for 222. If they start
messing around on the VHF FM ham bands they'll have to do it operating
simplex because I expect they'd get chased off the repeaters. That
would cramp their style pretty quick. A control operator punches the
"off" button, etc.

Yeah, as far as expecting the feds to do anything aboout it goes. But
the freebanders are just not a big qrm issue. Every time I've tuned
around 10m when the band is in any kind of decent shape the
ham-to-freebander population ratio is huge, 10:1, 20:1? And that's in
the cw segment. They'd get obliterated above 28.300 which is probably
why I've never heard one in the ham phone segment.

>for
>> you.
>
>The rules of that time were arbitrary

"Arbitrary" is simply a word used by those who don't agree with a particular standard. The standards of today's license testing can be called that, too. Almost any objective standard can be called "arbitrary". For example, why is the Technician written test 35 questions, not 34 or 36? Why is the passing grade a certain number of right answers (27, I think)? Why are all questions weighted the same, even though some are clearly more important for all hams to know than others?

The rules were bent for you, Cecil, and you are trying to rationalize it because, deep down inside, you know you got a free ride.

> and the standards were not
>lowered for me.

Yes, they were. The standard of the time was that if you failed the written after passing the code, you had to take BOTH over again. No credit for a previously passed test. No judgement calls by the volunteer examiner.

> Shorty already had knowledge of my code ability.

Doesn't matter. The standard was at least one minute solid copy out of five, and NO credit for past tests. A former Navy radio operator who could copy 60 wpm on a mill still had to pass the same 13 wpm test the same way.

>I know of a number of hams who signed off on code ability based on
>on-the-air QSOs performed at 13wpm or higher by novices while the
>examining ham listened in.

Two wrongs don't make a right. If they witnessed the Novice copying a solid minute of 13 wpm, that's fine, but anything else was a violation and a lowering of standards.
>
>> >Shorty knew that
>> >I had not forgotten Morse code in one month.
>>
>> How did he know that without a valid test? You were off the air.
>

>Shorty had heard me on the air as little as two months previously.

Doesn't matter. He heard you sending. The test was for both sending and receiving. And written copywas required.

>Milton told him that I passed 13wpm with flying colors only one
>month before.

Doesn't matter. The procedure of the time was clear. Violating it lowered the standards for you.

>No healthy person forgets Morse code in one month.

How do you know? Have you tested all healthy people who know Morse code?

>It was a victimless crime with no harm done.

Not true. Others who passed the code and failed the written had to do the code again before they were allowed to try the written again. Why didn't they get credit for passing the code? I know hams who had to go back several times before they were able to pass both tests at the same sitting. Sometimes many months passed before they could get to a test session. The rules were not bent for them. They should not have been bent for you.

It's interesting to note that the original distance requirement for a Conditional was 125 miles. Then it was reduced to 75 miles (1953?) until 1963, when it was extended to 175 miles. Why did the distance change? I suspect it was due in part to rule-bending like yours.

I recall very clearly how, in the mid-70s, a rumor circulated in these parts that the FCC was going to discontinue the Conditional and require all Conditionals to retest if they wanted to stay on the air. (The Conditional was discontinued, but no retest was ever required). The uproar among Conditionals around here (there were lots of them, even though Philly has long been an exam point - that's another story) was amazing and deafening. I was mystified because I could not imagine that any ham who had passed the test would have trouble passing it again, if only to please the FCC.

My point is that no one did any cleaning... After you've been on the internet awhile, you'll see that such comes and goes.. on nearly all the ng's... I've seen posts such as yours, and a few weeks later.. same thing starts over again..
The best thing to do (unless you can convince the persons' isp to cancel their account or something, which I've seen happen) is to ignore it.. You can extend the cycle by adding to it, iow.. ;)

Ha, ha! That's it. We need a standard to apply here. We're all using different meters, reading different things into the results. With the 1 through 10 meter, it could mean anything from a rating of quality to simply the presense of a troll. Since there is so much confusion with that system, lets clear up what your meter stands for now. Does the dB rating stand for the overall level of noise (if so, all meters would be pegged with the background noise on RRAM - and you thought this newsgroup was bad) or the loudness of the specific troll being read?

That condition was assumed in my original statement.

> >Proof: US HF hams were required by circumstances (FCC regulations) to
> >pass a Morse code exam.
>
> Only if they voluntarily consent to meet this "requirement." There is
> absolutely nothing recognizable as "force" being applied to them.

It doesn't matter if they voluntarily consent or involuntarily consent.
Feelings don't matter. In return for amateur radio operating privileges,
all citizens are, by definition, forced to meet the requirements for an
amateur radio license no matter how they feel about it.

> And the fact is, nobody was "forced" to take a Morse Code exam
> to gain HF privileges.

Yes, they were, Larry. They were, by definition, forced to pass a
Morse code exam to gain HF privileges. Please provide the name of
a person who gained HF amateur privileges without being required
by circumstances to pass a Morse code exam. "Required by
circumstances" is the dictionary definition of "forced".

Well, there you go again. The problem I see is that neither (reducing laws increase freedom or less government decreases taxes) is assured. Less laws could decrease the freedom of those protected by those laws, and even the smallest government can spend a lot of money.

The solution to this country's problems is not as simple as "less laws" or "less goverment." What we need are realistic laws and a responsive, financially responsible, goverment. And nothing the libertarians offer assures that (any more than the Democrats or Republicans assure it).

I was just looking through the messages in this thread. So far, we (the people in this thread) have talked about spelling checkers, "pony-tailed, multi-pierced, pot-smoking liberals," libertarians, AOL, Goldwater, governmental oppression, "grok," road commissioners, PMS, spelling cops, grammar mistakes, newsreaders, offensive boors, Fox News, service academies, pantywaists, the Constitution, Yellowstone National Park, and still more. Heck, with the subject line of this thread in mind, I don't think anything can be off subject in this thread at this point.

By the way, I do like your "lowest common demeaner" comment above. I'll plagiarize it if given an opportunity in the future.

If the city were to handle CB radio violations, I would expect them to handle it like any neighborhood noise or dog complaint. Normally it's just a warning. But in aggravated situations, such as numerous complaints and/or complainants, the violator can be prosecuted. The cost of the prosecution is not usually a factor in such decisions. Solving the immediate neighborhood problem (and making the voters/taxpayers complaints go away) is...

I have a friend who's knows the CB scene - he's also a ham. He says a lot
of the guys are running nice HF rigs for citizens band. Heck, they even
talk about it on the air.

I don't think they usually know very much about operating repeaters.
Chances of us hearing them on VHF is probably less anyway due to the shorter
range.

> When the spots are down in a few years they'll be back to talking
> across town again and it'll be over and forgotten for years. Again.

Why do you figure they wouldn't just tune to another band that does have
propagation? This is a free-for-all after all.

Still flogging this dead horse, Cecil? Your definition may be one
definition. My Random House College Dictionary and our massive
Webster's Unabridged downstairs don't show the definition you've
provided at all.

Nobody is forced to learn morse code.

And of course "dictionary definitions are ALWAYS right? They are ALWAYS
applicable regardless of the circumstances?

For someone who has repeatedly flaunted a cavalier attitude on "the law",
you seem awfully adamant about sticking to this "rule" in the application of
the definition of "forced".

I for one wanted to do these things to obtain an Amatuer Radio license.
Many others I know did the same thing. We were not forced by anyone to do
anything we did not want to do.

Ergo we were NOT forced, per your definition.

I didn't say I supported those positions, Cecil. I was giving examples that might conflict with your comments (and I said "could decrease," not "would decrease").

Furthermore, I already answered that issue - the welfare system as it has existed conflicts with what I said in the second paragraph about a "financially responsible" government.

Furthermore, I'm not completely opposed to welfare. I think we do need some system in place to help those in real need (those with medical handicaps, etc). And I think we need a system for those who need a helping hand during a financial crisis.

Of course, like most other Americans, I'm immediately opposed to welfare benefits for those who have no real need, or endless benefits for those who refuse to do anything to help themselves out of their financial problems.

Does that answer your questions about my views on welfare?

> No one exercising free will is forced to do anything, Cecil.

People who exercise their free will to decide to live and work
in this country are *forced8 to pay taxes. People are *forced*
to shoulder the responsibility for their free will decisions.

In return for privileges granted by the government, citizens are
required by circumstances to meet the requirements for those
privileges. "Required by circumstances" is the dictionary definition
of "forced". Therefore, in return for privileges granted by the
government, citizens are, by definition, forced to meet the requirements.

I obviously didn't have to. The *standard* at the time was to know
Morse code. I met that standard. If the *procedure* at the time was
to retake the test, then the procedure was violated, not the standards.

Incidentally, my 1957 ARRL License Manual
does not state that the code exam must be retaken 30 days later.
Speaking of passing the code exam and failing the written exam, it
says: "If you have failed (the written exam) study some more for the
examination and after another month or so try it again". No mention
of another code exam.

> > All the "VE" had to do was re-sign
> >the certification.
>
> Not if he was doing things by the standards of the time. Resigning the

> you.

Since I had already met the standards, the standards were not lowered.
It was a procedural violation, not a standards violation. I fully met
the standards of the time. Shorty was convinced that I met the standards,
I in fact did meet the standards, and he signed the paper.

A young looking person tries to buy a beer. The store owner asks him
for his ID. The young looking person is 21 so the store owner sells
him the beer. The same thing happens the next day. Have the standards
been lowered if the store owner doesn't ask for his ID the second time?
Can a person get younger as time passes? Can a healthy person who knew
Morse code 30 days ago not know Morse code today?

Dictionary definitions are the standard for a language.

> I for one wanted to do these things to obtain an Amatuer Radio license.
> Many others I know did the same thing. We were not forced by anyone to do
> anything we did not want to do.

It doesn't matter if you want to do it or not. It doesn't matter how you
feel about it. EVERY citizen obtaining privileges granted by the
government is forced to meet the requirements for gaining those privileges.
Saying nobody is forced to meet the requirements implies that some amateur
radio operator somewhere decided to use his free not to meet the requirements.
Where is he? What is his name?

> Ergo we were NOT forced, per your definition.

Sorry Steve, in return for obtaining certain privileges granted by the
government, citizens receiving those privileges are forced to meet the
requirements enforced by the government. That's just the way it is. How
you feel about those enforced requirements is irrelevant.

You can win the argument by giving us the name of just one individual
who gained amateur radio privileges while using his free will to decide
NOT to meet the requirements.

ME a PACIFIST?? That's almost an insult. I'm not a pacifist, I'm a
pragmatist. As in the FCC isn't going to bother with tracking down and
spanking the U.S. illegals and there ain't nothin' at all U.S. hams
can do about 'em either so why the discussion? It's just qrm, welcome
to ham radio Good Buddy.

There's your problem, they're all CB rcvrs. Gag. Get yourself at least
one real radio with a real cw filter. Then get on 40/20m cw and get
some practice with real qrm. You'll need that practice. In a couple
three years you'll be talking to yourself on 10m when the spots drop
and all those Asians magically go away and won't be ruffling your
feathers any longer. Mother Nature will fix the illegals on 10m.

Seems a contradiction between your two statements above.

> loudness of the specific troll being read?

Actually, it measures the *future* noise-to-signal ratio on the particular thread it is attached to on RRAP. It is *forced* to do this by mandatory acceptance of intermediate tachyometric bogons through its input port. This forced acceptance also means that it is willfully in violation of the light-speed restrictions of Einstein's Special Theory *and* the Entropy provisions of the Second Law of Thermodynamics. It is tempting to try to extend this future-measurement capability to more meaningful quanitities such as stock-market indices, but the incoherency properties of RRAP noise seemingly prohibit this. However, lest someone be so inclined, be advised that all rights for such troll-o-meter applications are patent-pendingly, copyrightmently and trade-markedably owned by K7JEB Enterprises Ink.

But to demonstrate the generous nature of K7JEB, a new and vastly improved troll-o-meter is made available below for the personal and very private use of fellow hams.

More likely it's the "sending unit" located in the tank.
Overfilling-"topping off"- the tank excessively can cause this.
Sometimes it has to be replaced to correct the problem.

Dick

I agree with everything you said. The reality is that
the cost is the factor...too many complaining citizens
is a cost an administration doesn't want. The problem
would still come down to properly gaining the right
evidence to obtain a conviction...a factor which
I don't see the typical local law enforcement
agencies doing very well.

Cheers,
Bill K2UNK

Let's see...CB has been in existance for 42 years and illegal ops
were around longer than that. Seems to be a very slow-moving
camel...

>The topic is a helluva lot more of a "problem" in this NG than it is
>on the air. As usual.

I have to agree with that. There are too many control-freaks
visible who raise their righteous swords and wave them
mightily, seeking the spectrally-pure hamaryan whatever.

It still surprises me that there is so much anger and spite over
CB after 42 years of existance...including the bundling-in of
all "illegals" (radio and otherwise) in with the evil CB types.
Tsk, tsk. :-)

Perhaps it is like an old network tagline -

"Mankind invented language to satisfy his need to complain."

:-)

Herman must have faulty antennas or has "oriented" his antennas in a direction not correctly stated. :-)

On hardware, "CB receivers" should have equally good performance to "real radios" (those used for amateur communications). Since Herman can add to or modify those receivers, even without a ham license, there should be no problem making those evil "non-real-radio" receivers into full-fledged "real radios." :-)

Maybe Herman's problems result from too much youthful time listening to 500 KHz while in the Coasties...or maybe he is still monitoring 500 KHz? Not stated. Odd that he now claims 10 m experience ("looking for CW signals") but a couple years ago was talking about "real radio" operation "across the Pacific."

Two meter repeaters are not representative of most hams - especially in any
major city. Try working some two meter SSB, or better yet, spend some time
on HF. You will find a completely different type of operator.

That's roughly what I hear on 10 cw during weekdays here on the east
coast. It gets much more lively on weekends. A big percentage of the
what I assume are freebanders on 10 here are ssb in Spanish. But they
might be hams who are allowed to operate ssb all the way down to
28.000.

No one has the privileges forced on him. They are voluntarily undertaken. No one is forced to learn morse code.

> That's what governments do.

That pretty well sums it up in your opinion, huh? It's a shame you wasted all those hours in Civics and Government classes.

Because you didn't meet the standards of the time.

> The *standard* at the time was to know
>Morse code. I met that standard.

No.

The standard of the time was to demonstrate skill in Morse code sending and
receiving at 13 wpm by passing the prescribed tests, using the standards
mandated by the FCC for those tests. Among those standards were things like the
"at least one solid minute of legible copy out of a maximum of five minutes"
standard. And the "pass it all at one go" standard.

>If the *procedure* at the time was
>to retake the test, then the procedure was violated, not the standards.

The procedures are part of the standards. If the procedure was violated, so
were the standards.
>
>Incidentally, my 1957 ARRL License Manual

I'm not going to get involved in one of your word games.

>I fully met
>the standards of the time.

No, you did not. They were lowered for you.

> Shorty was convinced that I met the standards,
>I in fact did meet the standards, and he signed the paper.

Nope. He bent the rules.

If he was convinced that you met the standards, why did he start to give you another code test and then quit when his VFO failed? If another test was not needed, why did he start one?
>
>A young looking person tries to buy a beer. The store owner asks him

>him the beer. The same thing happens the next day. Have the standards
>been lowered if the store owner doesn't ask for his ID the second time?

Not the same thing at all. Being "carded" is not a skills test.

And in many areas, sellers of alcohol must verify age at each sale if there is any doubt as to the age of the buyer. The standard of the law IS violated if that is not done.

>Can a person get younger as time passes?

In some ways, yes. Suppose the person really is under 21 but uses a phony ID the first time and gets away with it. Next time he might not be so lucky. Or the phony ID might be confiscated by police. By requiring the demonstration of age at each sale, the standard of enforcement is higher than if it is required only once.

> Can a healthy person who knew
>Morse code 30 days ago not know Morse code today?

That's not the question. The question is "can a "healthy" person who passed the prescribed Morse test one day fail it at some time in the future?" The answer is obviously YES.

The next step, Cecil, is for you to drag out the dictionary and start doing the definition wordgame thing. It's your standard procedure about now. I've got better things to do.

Do it over a 10 to 15 year phaseout, once Radio Shack, Wal-Mart, K-Mart
and
the others run out of stock CBs (27MHz Variety) it will be a no-brainer,
the export business will be all there is left! 15 years down the road
with
no legal CB Sales (27MHZ) will thin out the ranks and since the existing
stuff will be allowed to continue during the planned phaseout and the
common stuff will be obsolete and hard to repair, nature and time
handles
the problem and UHF CB will be the rage since many more channels would
be available.

The answer is NOT obviously yes. Please name me one person who knew Morse
code one month and didn't know it the next month - no comas, please.

If it was evil to pass a Morse code exam one month and be given credit
for it a month later, doesn't that make the whole CSCE system evil?

Nobody said they did. So why do you need to attempt such a
diversion?

Anyone who obtains the privileges has had the requirements
enforced by the government. Governments force citizens to
meet the necessary requirements in return for privileges
granted. That's what governments do.

Don't underestimate what they might know, some of them are quite
technically competent. But I agree, I doubt that 2m would ring their
chimes, there's a lot more activity on 27Mhz and the range is a bit
better for local comms, they wouldn't gain anything by going to 6 or
2m.
>
>
>Why do you figure they wouldn't just tune to another band that does have
>propagation? This is a free-for-all after all.

Apparently there already is some freeabanding on much lower freqs.
People using HF ham xcvrs on boats on the west coast are operating
somewhere around 6.5 Mhz. I undertstand it's a pretty big group.
That's a gray area. There are a bunch of 100-150w marine ssb xcvrs
available which can operate on hundreds of channels everywhere from
1.6 to 30Mhz and it's all 100% legal.
>
I doubt that freebanders would find operating in the low ham bands a

Sure you will, W6DKN. Have you been to 3.860 MHz lately? The two-meter operators are not any better or worse than any other ham. I take that back, at least the two-meter operators don't usually go around promoting bigotry towards their fellow hams.

How do you figure that? Having realistic welfare law does not suggest less, or more, laws - just different laws that the majority would find more reasonable.

Since the city would be allowed to write the law, they could make it relatively non-technical and easy to prosecute. If the neighbors are willing to come to court and testify (as they must now do in dog barking violations), all they have to do is convince a judge beyond a reasonable doubt that the CBer is disturbing their electronic piece.

A similar situation happened to a ham recently (as discussed earlier here), and they didn't even need to make new law to take him to court.

As far as the legal equipment argument goes, the FCC can impose quiet hours on a *legal ham* now if he can't work things out with his neighbors. The city could easily make such a law to do the same thing to a CBer...

Sorry for the cross post. I will have to agree with the last post, the ham bands sounds just like the cb band. I have my extra ticket, and it makes me mad every time I listen to 2 meters, or 75 for that matter. All they say is "roger roger" before every transmission. And what all the truckers that is on 2 meters, sounds like channel 19. Braker braker 19 good buddy.

So, if you know where the jerks are, why waste your time there? At least they occupy a small, known piece of the band so the trash is easy to avoid - unless you're the type that likes this stuff. (Yes, I have heard about the crap on 3.860, but I have no desire to waste my time with it)

Personally I prefer to work DX and do very little stateside work (which seems to be where most of the problem operators are on HF). I work 12, 17, 20, and 40 almost every day and I have never had anything but great QSO's. I do work VHF/UHF also, but I only do SSB or FM simplex and SATS. There are very few "garbage operators" in these modes.

At least on HF, the jerks stay in a small, relatively consistent spot and it is fairly common knowledge where they are, so they are very easy to avoid. Very different than the VHF repeaters in the big cities, where the jerks get their kicks from going from machine to machine to see what trouble they can cause (just like 11 meters).

Aaron:

As an AOL user from the very beginning, I have had to take a lot of abuse from you whiney, never-a-life-having computer nerds just because I have other things to do with my valuable time than to figure out the unnecessary complexities of a piece of what is supposed to be functonal software. Computers are supposed to simplify the lives of their users, not further complicate them. And, I assure you, there is nothing about any "newsreader" that I could not master -- I would simply read the documentation and follow the instructions. I got my introduction to newsgroups on AOL, and simply never found any need to use a different "newsreader." I know, I know -- you were hoping I'd hire someone like you to sit there and tell me which icons to click. My brother does that for a living, and its good work if you can get it -- but "real" hams and "real" computer users like me don't need it!

That thought had not eluded me, however the gauge remains pegged when the
ignition is switched off and thus power is removed from the instrumentation.

Thank you for you response.

The point is that the 2-meter versus HF operator nonsense you mentioned earlier has absolutely nothing to do with it - the "jerks" are the same on both (the only difference between 2-meters and HF is the limited number of repeaters on 2-meters - harder to avoid the "jerks" if you stay mainly on the repeaters).

Therefore, you should not have said earlier that the "two meter repeaters are not representative of most hams" (you said "hams" here) and that he should "spend some time on HF" because he "will find a completely different type of operator." That is not true. There are no more "jerks" on 2 meters than on HF - they're only a little more difficult to avoid because of the limited number of repeaters.

If the "jerks" really disturb you, then I agree with your suggestion - simply avoid the repeaters. Its far easier to avoid them on the SSB frequencies (just like on HF).

Take care, W6DKN.

Lets take a survey of the number of jerks and lids out of 1000 QSO's on the
2 meter repeaters in Los Angeles, and do the same with 1000 HF QSO's on 17
meters. If you are correct, the ratios should be about the same...

It has certainly been my experience over the last several years in/around the Los Angeles area of So CA. Maybe in your area things are different. But, like most people, we base our opinions on our personal experiences.

And let's not forget that my original response was to a post stating that from listening to 2 meters, the poster concluded that ham radio in general was just like 11 meters.

> If the "jerks" really disturb you, then I agree with your suggestion -

They don't disturb me - in fact they have no effect on me one way or the other - because I choose not to pay any attention to them.

If I could afford a 100KW linear I sure wouldn't be wasting time slumming
in here to be worried about it.

>Dictionary definitions are the standard for a language.

For the >language< itself. However the English language is frought with
multiple implied meanings to words. You have selected one particular word and
stuck to it as the SOLE meaning. Pretty narrow perception.

>Saying nobody is forced to meet the requirements implies that some amateur
>radio operator somewhere decided to use his free not to meet the
>requirements. Where is he? What is his name?

I think you are into the grapes again, Cecil. This is silliness.

>Sorry Steve, in return for obtaining certain privileges granted by the
>government, citizens receiving those privileges are forced to meet the
>requirements enforced by the government. That's just the way it is. How
>you feel about those enforced requirements is irrelevant.

Yeahyeahsuresure.

>You can win the argument by giving us the name of just one individual
>who gained amateur radio privileges while using his free will to decide
>NOT to meet the requirements.

Unlike Lennie who is constantly trying to run up his imaginary "message
points' and denying that he is trying to win some joust with the windmills, I
have no arguement to win nor points to collect, Cecil.

I met the requirements, and was NOT forced to do it.

Define it as you will.

Sure it is. If it happens, it must be possible.

> Please name me one person who knew Morse
>code one month and didn't know it the next month - no comas, please.

The question is: "can a "healthy" person who passed the prescribed Morse test
one day fail it 30 days later?"

If the answer is "no", why did the FCC require retesting the code if someone
failed the written?

I know of at least one ham who went back to the FCC office back in the 1970s
several times before getting his General. I will not take the chance of
embarrassing him by mentioning his call or name.

He went to the FCC, passed the code and flunked the written. Went home, studied
the written and ignored the code, went back to FCC a month later and flunked
the code. Went home and studied the code and ignored the written. went back to
the FCC, passed the code and flunked the written by a single question. Finally
got both of them at the same session on the fourth try.

>If it was evil to pass a Morse code exam one month and be given credit
>for it a month later, doesn't that make the whole CSCE system evil?

Who said anything about "evil"? Not me. We were talking about lowering
standards and bending rules, which was done for you (but not for everyone else)
back then by a volunteer examiner.

The CSCE system changed the standards for everyone. That's a completely
different thing.The CSCE system was created in part to eliminate the problem of
hams like my friend who had to keep going back to the FCC for retesting of
elements already passed. It also reduced the FCC's admin workload.

If the code re-test was not required back then, why did Shorty do it (until his
VFO failed)?

You can prove what you are saying is true if you can produce one person with amateur radio operating privileges who changed his circumstances so he was not forced to meet the requirements for amateur radio privileges. What's his name, Steve? Exactly how did he get his amateur radio privileges without meeting the requirements?

People with amateur radio licenses had no choice except to meet the requirements. One cannot be an amateur radio operator while using his free will to ignore the requirements, rules, and regulations. "No choice" equals "required by circumstances" equals "forced".

In return for certain privileges, governments force citizens to meet the requirements for those privileges by enforcing the rules. That's what governments do.

Getting a marine license for a boat is simple procedure and no
"Operators" license is required UNLESS the boat makes international
voyages or communicates with foreign flag vessels or stations. Then you
only need a "restricted Operator's" license unless you are commercial,
then an element 1 MROP (Marine Radio Operator's Permit) is required.
Even getting a coast station license isn't a big hassle anymore which
allows ship to shore comms on HF and VHF freqs.

> I doubt that freebanders would find operating in the low ham bands a
> very appetizing proposition, too much qrm. They'd be better off in the
> quiet holes outside the ham bands.

Most of the "quiet holes" are special use types such as aircraft, marine
and business. Some fisherman in Louisiana decided to use an aircraft
HF control freq (HF) since is was "quiet", little did they know about
the
duplex setup. A visit from FAA, FCC and FBI boys didn't exactly make
their day when the Coast Guard rounded up the "HF Freebanders," and
the riot act was read, even a local radio shop was raided and the techs
given the third degree. Needless to say, a lot of ham gear came on the
local market after that fiasco.

From reading the license manual, I'm not sure that retesting was required.
If not retesting was evil then, why isn't it evil now?

> He went to the FCC, passed the code and flunked the written. Went home, studied
> the written and ignored the code, went back to FCC a month later and flunked
> the code.

Then he obviously did not meet the standards. My 13 wpm test was 5 minutes
of solid copy with no errors. I was nowhere near the failure threshold as
was the guy above.

> The CSCE system changed the standards for everyone.

13wpm Morse code skill continued to be the standard for Generals so the
13wpm code standard didn't change at all. The testing procedure paperwork
associated with the unchanged standards is what changed. The code standard
didn't change until 2000.

> If the code re-test was not required back then, why did Shorty do it (until
> his VFO failed)?

That was solution number one which failed. Solution number two was to
contact the ham who had given me the code exam one month before and
verify that I had copied 13wpm for five minutes with zero errors. I'm
not even convinced that violated the rules. Can Shaq dunk a basketball?
Does he have to prove it every new day?

Actually, I am adopting the broad definition of "forced" while you
are trying to use the narrow definition. So yours is the narrow
perception. But since I made the original statement about three
years ago, I got to choose the definition of the words I used.

> I met the requirements, and was NOT forced to do it.

It doesn't matter how you feel about the requirements, Steve. All citizens
who obtain amateur radio privileges are forced to meet the requirements.
If that were not true, there would exist some citizens who used their
free will to obtain amateur radio privileges without meeting the requirements.
Who are those citizens, Steve? You remind me of Clinton. Oral sex is not
sex. Enforced governmental requirements are not forced.

Asian-sector Antarcticans. In the case of a high dipole one will
notice maybe as much as a couple s-units attenuation of those signals
at most. In the case of a low dipole (<half wave) the lobes are barely
lobes, the things become close to being omnidirectional.
>
>On hardware, "CB receivers" should have equally good
>performance to "real radios" (those used for amateur
>communications).
>
There's no comparison between the rcvr performances of off-the-shelf
CB and ham rcvrs particularly when it comes to listening to cw. The
biggest difference is IF bandwidth, then they go downhill from there,
front end overload, IMD, etc. What the hell, ya can buy a new Radio
Slack CB xcvr for $49.99, that's the whole quality & performance story
right there.
>
Back when I diddled with CB I switched between one of those clunkers
and my Collins rcvr and noted that I could only hear maybe 10% of the
signals on a given 27Mhz. freq with the Collins vs. all the "signals"
I could hear with the CB clunker. Heh.

> hearing on the bottom end of 40?? On 10??

Sorry for the confusion, Brian. I hear unlicensed stations operating on 10, 30, and 40 meters. Where the stations originate from differs on each band due to the differing propagation characteristics. Jeff mentioned that he could hear Malasian taxicabs, and Cecil didn't believe him. I jumped in and observed that Cecil was considerably further away, offering that as an explanation for why he might not expect to be able to hear them. I added that I can hear these stations in the mornings on 40 meters. That was met with the same kind of skepticism. Just because you guys can't hear it from where you are doesn't mean it doesn't exist. I'm surprised that you're unaware of this activity. It has been widely reported.

Wow! Cellphone war!!!

But wait, what if the cellphone user is aware of the jamming and just blast
out their ringtone anyway?,
Or turn the volume up high and keys morse code messages using the keypad...

How does the person with the cellphone jammer know for sure that the jammer
is only jamming frequencies only used by cellphones?

You know and I know that we are speaking in context about U.S. amateur radio operators licensed by the FCC. That you must resort to a foreign king to produce the requested person must mean that you don't know an amateur radio operator in the U.S. who changed his circumstances so he was not forced to meet the requirements for amateur radio privileges.

I accept all the wide ranging definitions of "forced", Steve. You
do not. That means your acceptable range of definitions is more narrow
than mine. Your narrow minded non-acceptance of a valid Webster's
dictionary definition is what the argument is all about. If you
don't accept the dictionary definitions of words, rational
communication is impossible.

> >It doesn't matter how you feel about the requirements, Steve.
>
> Sure it does.

As far as meeting the requirements, it doesn't matter how you feel about
the them. You may love them or you may hate them. You are still forced to
meet the same requirements as everyone else. Anything short of meeting
those requirements is fraud.

> >All citizens who obtain amateur radio privileges are forced to meet the
> requirements.
>
> I wasn't forced to do anything Cecil.

The best you can say is, "I didn't mind being forced to meet the
requirements."

The requirements are enFORCED by the government. That's why you met them.
You wouldn't have met them if they had not been governmental requirements.
Therefore, by definition, you were forced to meet the same requirements
as everyone else who were granted the same privileges as you. Those
requirements are enforced no matter how anyone feels about it. The only
way to keep from being forced to meet the same requirements for amateur
radio privileges as everyone else is to engage in fraud.

When you say, I wasn't forced to meet the requirements, you are essentially
admitting that you didn't meet the requirements, since the government enFORCES
those requirements that you were not forced to meet.

> >If that were not true, there would exist some citizens who used their
> >free will to obtain amateur radio privileges without meeting the

>
> "Meeting the requirements" and being "forced" are not synonomous.

When those requirements are enFORCED by the government, they are, by definition, synonomous. That you feel otherwise is irrelevant. Feelings don't matter.

Requirements enforced by the government in return for granted privileges are required by circumstances and therefore, by definition, citizens who are granted those privileges are forced to meet those requirements. NO EXCEPTIONS!!!

It is not a diversion. If one can't be forced to obtain a license, one cannot be forced to learn morse code. You seem to have trouble with more than one idea linked to another.

> Anyone who obtains the privileges has had the requirements
> enforced by the government. Governments force citizens to

My original statement was: No one is forced to learn morse code.

Neither government or individuals force anyone to learn morse code. My neighbor has never had anyone from the government show up to force him to learn it. His son lives across the road. No feds have arrived to force him to learn morse either. Neither cares a whit for amateur radio. I'm certain that they'd be keen to learn it on their own if they ever developed any interest in amateur radio.

Your insight into the work of government is nothing short of remarkable.

Damn, Cecil, I think you've been bested at your own word game. You certainly used the term "governments" in the plural and didn't specify the U.S. government. You used the all inclusive term.

It surely is peculiar that my unabridged dictionary doesn't use your "required by circumstances" term at all in any of the meanings listed for the word "forced". Despite that, until the day that HF amateur radio licenses in the U.S. become mandatory, no one is forced to learn morse code.

Well, governments do set requirements for privileges granted. That a
king can violate his own laws is nothing new. The United States, OTOH,
is a nation of laws, not of men who may be king. Your feeble attempt
at a diversion is duely noted. Please name one US citizen who is capable
of using his free will (like a king) to violate the requirements for a
US amateur radio license. Are you implying that is what you did?

> It surely is peculiar that my unabridged dictionary doesn't use your
> "required by circumstances" term at all in any of the meanings listed
> for the word "forced". Despite that, until the day that HF amateur
> radio licenses in the U.S. become mandatory, no one is forced to learn
> morse code.

Morse code ***IS*** mandatory for US HF hams, Dave. Therefore, US
HF Amateur Radio Operators are forced to learn Morse code. Else
they wouldn't be HF Amateur Radio Operators, would they? How you can
build such a contradiction directly into your argument is beyond belief.

Once a citizen of the US commits himself to becoming an HF ham, to succeed
he has absolutely no choice. He is forced to pass a Morse code examination
as part of the requirements enFORCED by the US government. If you did not
submit to the enFORCED requirements, then you must have received your license
through some sort of fraud.

The FCC enFORCES the US amateur radio requirements. Therefore, US hams
are forced to meet the requirements. There is simply no other choice.
That you enjoy being forced to meet the requirements is irrelevant as
are ALL feelings where rigid governmental requirements are concerned.
Nobody cares how you felt about being forced to meet the requirements.
That you didn't feel forced is irrelevant. Try using your free will not
to meet the requirements and see what happens to your privileges.

> cannot be forced to learn morse code.

That's an absolutely ridiculous statement. Of course, one can be forced
to learn Morse code in order to obtain an HF ham license. The license grants
privileges. The Morse code is part of the requirement for those privileges.
The requirements are enFORCED by the government. US HF amateur radio
operators are, by definition, forced to pass a Morse code test. The US
government enFORCES the Morse code requirement for HF hams. Exactly
how has any HF ham circumnavigated that requirement?

> My original statement was: No one is forced to learn morse code.

All HF amateur radio operators who didn't already know Morse code were
forced to learn Morse code. Otherwise, they wouldn't be HF amateur
radio operators. How that simple logic escapes you is beyond belief.

> Neither government or individuals force anyone to learn morse code.

All HF amateur radio operators who didn't already know Morse code were
forced to learn Morse code in order to obtain their HF privileges. The
government forces citizens to meet requirements in return for privileges
granted. Why is that concept so hard for you to understand?

> My neighbor has never had anyone from the government show up to force
> him to learn it.

Is he an HF amateur radio operator? If so, he was forced, by the government,
to pass a Morse code test. If he used his free will not to learn Morse code,
then he is either not an HF ham or he obtained his HF ham license fraudulently.

> His son lives across the road. No feds have arrived
> to force him to learn morse either. Neither cares a whit for amateur
> radio.

Well, there's your answer. It is true that nobody is forced to become
an amateur radio operator. But all HF amateur radio operators are forced
to pass a Morse code test. If that is not true, where are the HF hams
who used their free will not to pass a Morse code exam. Please produce
a list of HF hams who chose not to meet the Morse code requirement.

Jerks like an audience. That's why you will more likely find them on
a repeater or a known HF garbage frequency, rather than on a simplex
HF or VHF frequency. That's why there are more ham jerks on the ham
newsgroups, present company excepted of course... :-)

Analogy: Prospective hams who never want to use CW have to take a lot
of abuse from (your words:) "whiney, never-a-life-having" hams who
insist on a code test...

Personal response: Thanks for the compliment, but I wouldn't consider
myself a computer nerd. This newsreader that I use (Agent) is very
easy to use and took about a 2 hour learning curve.

>because I have other things to do with my valuable time than to figure
>out the unnecessary complexities of a piece of what is supposed to
>be functonal software.

Translation: I'm whining that if I don't need to use a *real*
newsreader, why should I have to learn this new skill...

Analogy: If prospective hams don't want to use CW why should they have
to learn the code...

Personal response: A *real* newsreader allows you to sample many news
servers, not just your own ISP's and not just Usenet. Many ISP Usenet
servers don't even carry all the Usenet newsgroups. With a *real*
newsreader you are not locked in to one Usenet server. And many
non-Usenet servers also carry many interesting groups unavailable to
you. You are missing as much newsreading by your lack of this computer
skill as a ham is missing on the ham bands with his lack of a code
skill...

> I assure you, there is nothing about any "newsreader" that I could not master

I have no doubt that you could master any newsreader. And I have no
doubt that just about anybody could master the code...

>but "real" hams and "real" computer users like me don't need it!

I dunno Larry, you sure sound like one of those whiney, knuckle
dragging, never-a-life-having, non-real hams griping about having to
learn a new skill that they don't think they want or need... :-)

Get it together, Cecil: everything's NOT equal---it's one minute
of 13 wpm one month versus one minute of 13 wpm in another, etc.
Not one versus five, or perfectly now, less than perfect later.
Apples vs. apples, not apples vs. hamburgers. So much
for bullwhip.

That was not the case back when I had a Ray Jeff VHF radio aboard the
family boat. Only marinas and the CG were allowed to have shore-based
VHF stations. Predicatably that law was busted all over the country, I
guess they gave up and made it legal at some point.

Fundamental law: only the FCC has jurisdiction in electronic interference cases, whether the station is in compliance with FCC rules or not - a local/state or Federal court cannot enjoin operation nor impose penalties in a suit brought by alleged "victims". The only court action that can result in such a situation would be an FCC application in Federal court to get judicial enforcement of its order against a recalcitrant non-complying station/operator. State and local courts are out of that loop.

The adoption of the Feingold Bill did not change that. Under that Bill, the only authority that the "locals" have is to enforce FCC power, frequency, and equipment compliance standards, and they had better have an experienced communications engineer or technician who is qualified in enforcement measurements making those determinations or they will be shot down by any decent defense lawyer.

>A similar situation happened to a ham recently (as discussed earlier
>here), and they didn't even need to make new law to take him to court.

IIRC "they" lost on jurisdictional grounds. Another fundamental of the law: one cannot be found to be a public or private nuisance for doing an action for which one has a license (expressed or implied) granted "in the public interest, convenience, or necessity".

>As far as the legal equipment argument goes, the FCC can impose quiet
>hours on a *legal ham* now if he can't work things out with his
>neighbors.

This is done only when the extrinsic symptoms make it evident that the station is clearly in violation and then they are imposed only until the FCC can get a crew out there to make technical measurments.

>The city could easily make such a law to do the same thing to a CBer...

Not so, my friend. "Locals" have no authority to regulate time and place of operation, only compliance with FCC frequency, power and equipment compliance standards.

Much as I oppose(d) the Feingold Bill, it was clear that it did not give the "locals" any authority to make or enforce "rules" that were more stringent than the FCC rules or were concerning any facet of CB operation other than enforcing the rules on frequency, power, or equipment compliance. My gripe was that it was bad policy to have anyone enforcing FCC rules EXCEPT the FCC.

Try reading the 1954 version with an open mind. It was required back then. It
was required right up until CSCEs were authorized.

>If not retesting was evil then, why isn't it evil now?

Who is talking about "evil"? Not me.

>Then he obviously did not meet the standards.

Exactly - because the standard was to pass BOTH tests at the same session. By
saying "Then he obviously did not meet the standards" you agree that part of
the standard of the time was to not get credit for a previously-passed element.

If the examiner had given him credit for passing the code when he went back the
second time, he would have passed the written. But that's not how it worked
back then.

> My 13 wpm test was 5 minutes
>of solid copy with no errors.

That's very good. But it doesn't mean you get a "get out of test free" card.

> I was nowhere near the failure threshold as
>was the guy above.

Doesn't matter. The challenge was to come up with an example of someone who
passed the test, then flunked it a month later. I did so.
>
>> The CSCE system changed the standards for everyone.
>
>13wpm Morse code skill continued to be the standard for Generals so the

>13wpm code standard didn't change at all.

Yes, it did. The speed was the only thing that didn't change.

>The testing procedure paperwork
>associated with the unchanged standards is what changed. The code standard
>didn't change until 2000.

Not true at all.

At one time, the ONLY way for non-disabled persons to pass the code receiving test was to present the examiner with at least one solid minute of legible copy out of five. No time was allowed to go back and fix errors or blanks. When the code stopped, it was pencil DOWN and the examiner took the paper away.

Then the options of fill-in-the-blank and multiple-choice code tests were added, along with the 1-minute-out-of-5 rule. The sending test was "waived" too. Many VEs now allow time to go back and fix errors. The standards changed greatly, and long before 2000.
>
>> If the code re-test was not required back then, why did Shorty do it (until

Might be SOME very low dipoles that way, senor, but you can't say that they all are. Firstly, remember that Herman said his antennas were 100 feet up. That's easy 3 wavelengths at 10 m. Secondly, the way to get omvi patterns is to use two half-wave long whips at 90 degrees (aircraft VHF radios sometimes use those...omni at horizontal polarization.

Low dipoles over good conductors (sea water is fairly good) will have lobes pointing UP. That may be good for NVIS, but not for long-haul HF skip. Dipoles at a three-lambda height get very classical in patterns.

I'm still wondering what happened to the Herman "wire beam" that was slung between buildings. [described in here around 3 years (or yarns) ago...]

>There's no comparison between the rcvr performances of off-the-shelf

>front end overload, IMD, etc. What the hell, ya can buy a new Radio
>Slack CB xcvr for $49.99, that's the whole quality & performance story
>right there.

As I said, senor, hams are allowed to take anything and rebuild it and, if a transmitter that performs within tech specs of Part 97, transmit with it. If you want straight-from-the-box rigs, then low cost equals low performance whether its a dedicated-to-ham-use radio or the evil, no-good, clunky CB (adjectives added to please all the CB haters out there). :-)

>Back when I diddled with CB I switched between one of those clunkers
>and my Collins rcvr and noted that I could only hear maybe 10% of the
>signals on a given 27Mhz. freq with the Collins vs. all the "signals"
>I could hear with the CB clunker. Heh.

Military Collins receiving equipment is not noted for sensitivity.
The venerable R-390 to R-392 best HF sensitivity is specced
at 3 microvolts for 10 db S:S+N. It's in the book. Modern AM
(voice-channel bandwidth) receivers for HF can do about an
average of 0.8 microvolts, less than 0.5 microvolts on SSB.

> decent defense lawyer.

Under those circumstances I doubt that any of the cities in my area
will get involved...

> This [quiet hours] is done only when the extrinsic symptoms make it evident
> that the station is clearly in violation and then they are
> imposed only until the FCC can get a crew out there to make
> technical measurments.

That may be the FCC practice, I'll certainly defer to your experience
on the matter. However that doesn't appear to be what the regulations
say. In fact part (a) might be an easy way for some local law
enforcement of quiet hours using existing FCC regulations, with little
technical expertise needed. BTW- Those weird quiet hours must have
been selected in the 30's... :-)

Sec. 97.121 Restricted operation.
(a) If the operation of an amateur station causes general
interference to the reception of transmissions from stations operating
in the domestic broadcast service when receivers of good engineering
design, including adequate selectivity characteristics, are used to
receive such transmissions, and this fact is made known to the amateur
station licensee, the amateur station shall not be operated during the
hours from 8 p.m. to 10:30 p.m., local time, and on Sunday for the
additional period from 10:30 a.m. until 1 p.m., local time, upon the
frequency or frequencies used when the interference is created.
(b) In general, such steps as may be necessary to minimize
interference to stations operating in other services may be required
after investigation by the FCC.

yodoc@aol.comnospam (Larry Roll K3LT) wrote:
>Here's another definition of "forced;" from the Merriam-Webster Collegiate

In the spirit of keeping this thing going,
here is what the American Heritage Dictionary has:

forced (fï¿½rst, f ï¿½rst) adj. 1. Imposed by force; involuntary: was condemned to a life of forced labor; a plane that made a forced landing. 2. Produced under strain; not spontaneous: forced laughter. See note at forceful .
force (fï¿½rs, f ï¿½rs) n. 1. The capacity to do work or cause physical change; energy, strength, or active power: the force of an explosion. 2. a. Power made operative against resistance; exertion: use force in driving a nail. b. The use of physical power or violence to compel or restrain: a confession obtained by force. 3. a. Intellectual power or vigor, especially as conveyed in writing or speech. b. Moral strength. c. A capacity for affecting the mind or behavior; efficacy: the force of logical argumentation. d. One that possesses such capacity: the forces of evil. 4. a. A body of persons or other resources organized or available for a certain purpose: a large labor force. b. A person or group capable of influential action: a retired senator who is still a force in national politics. 5. a. Military strength. b. The entire military strength, as of a nation. c. Units of a nation's military personnel, especially those deployed into combat: Our forces have at last engaged the enemy. 6. Law Legal validity. 7. Physics A vector quantity that tends to produce an acceleration of a body in the direction of its application. v. tr. forced forcï¿½ing forcï¿½es 1. To compel through pressure or necessity: I forced myself to practice daily. He was forced to take a second job. 2. a. To gain by the use of force or coercion: force a confession. b. To move or effect against resistance or inertia: forced my foot into the shoe. c. To inflict or impose relentlessly: He forced his ideas upon the group. 3. a. To put undue strain on: She forced her voice despite being hoarse. b. To increase or accelerate (a pace, for example) to the maximum. c. To produce with effort and against one's will: force a laugh in spite of pain. d. To use (language) with obvious lack of ease and naturalness. 4. a. To move, open, or clear by force: forced our way through the crowd. b. To break down or open by force: force a lock. 5. To rape. 6. Botany To cause to grow or mature by artificially accelerating normal processes. 7. Baseball a. To put (a runner) out on a force play. b. To allow (a run) to be scored by walking a batter when the bases are loaded. 8. Games To cause an opponent to play (a particular card). Idioms: force (someone's) hand 1. To force to act or speak prematurely or unwillingly. in force 1. In full strength; in large numbers: Demonstrators were out in force. 2. In effect; operative: a rule that

is no longer in force. [Middle English from Old French from Medieval Latin fortia from neuter pl. of Latin fortis strong; See bhergh- 2 in Indo-European Roots.] force ï¿½aï¿½ble adj. forc ï¿½er n.
Synonyms: force compel coerce constrain oblige obligate These verbs mean to cause a person or thing to follow a prescribed or dictated course. Force, the most general, usually implies the exertion of strength, especially physical power, or the operation of circumstances that permit no alternative to compliance: Tear gas forced the fugitives out of their hiding place. Lack of funds will eventually force him to look for work. Compel is often interchangeable with force, but it applies especially to an act dictated by one in authority: Say nothing unless you're compelled to. His playing compels respect, if not enthusiasm. Coerce invariably implies the use of strength or harsh measures in securing compliance: ï¿½ The way in which the man of genius rules is by persuading an efficient minority to coerce an indifferent and self-indulgent majority ï¿½ (James Fitzjames Stephen). Constrain suggests that one is bound to a course of action by physical or moral means or by the operation of compelling circumstances: ï¿½ I am your anointed Queen. I will never be by violence constrained to do anything ï¿½ (Elizabeth I). Oblige is applicable when compliance is brought about by the operation of authority, necessity, or moral or ethical considerations: ï¿½ Work consists of whatever a body is obliged to do ï¿½ (Mark Twain). Obligate applies when force is exerted by the terms of a legal contract or promise or by the dictates of one's conscience or sense of propriety: I am obligated to repay the loan. strength

One doesn't jam the transmitter under "normal"
circumstances. It's the receiver that is usually
jammed.

> How does the person with the cellphone
> jammer know for sure that the jammer
> is only jamming frequencies only used
> by cellphones?

Let's clear this up. A "jammer" is a
transmitter. That's all. A transmitting
frequency is set on a "narrow-band" jammer
the same way it is with any other xmitter.

["Broadband" or "sweep" jammers are
generally only used on the battlefield.]

But jammers /are/ designed to defeat
reception and a lot of jammers cause
spurious emissions and they also,
generally, have filthy power supplies.

And that can get people killed if
there's even a tiny mistake made.

I'm looking forward, myself, to cafes
and coffee shops which advertise
themselves as being in Faraday cages.

ARRL members, Here is a letter that you can use and send to your ARRL section manager, Division director, and ARRL board of Director:

Dear (insert directors name here),

Why don't you wake up and pull your fucking head out of your ass? I am concerned about the quality of amateur radio operators, not quantity. If I wanted to listen to a bunch of stupid operators, I would listen to CB. Do us all a favor and propose something that will impove amateur radio, not dumb it down. Bring integrity and intelligence back into the amateur radio service. Thanks and 73.

(insert your name here)

I have five reasonably decent HF rcvrs/xcvrs including one Collins box
and in all cases the ssb/cw sensitivities are in the 0.015-0.025 mV
range. Radios like these are not all about "state of the art"
sensitivity which is a no-brainer and is as often as not a detriment
to decoding weak HF signals. To wit: The only way I could finally get
solid copy out of the three watt French station I worked on 40m cw
last nite was to crank in 10dB worth of rcvr RF attenuation which got
rid of a useful amount of crap in the passband.

Is that true, Phil? HR2346 (now part of 47 U.S.C. 302a) said...

"...a State or local government may enact a
statute or ordinance that prohibits a
violation of the following regulations
of the Commission under this section:

(A) A regulation that prohibits a use of
citizens band radio equipment not
authorized by the Commission."

I was under the impression that if the state can pass a law that prohibits the use of such equipment, it can "enjoin operation" of that equipment. Isn't "enjoin" and "prohibit" the same thing? Likewise, if they can prohibit outright, what is to prevent them from doing so during certain hours of the day?

Likewise, the bill went on to say...

"(B) A regulation that prohibits the
unauthorized operation of citizens band
radio equipment on a frequency between
24 MHz and 35 MHz.

Wouldn't the operation of a station causing interference be an "unauthorized operation?" If so, wouldn't this paragraph cover electronic interference situations when it comes to local enforcement?

Very true. Obviously, the trolls just love to start fights between these groups - hams versus CB'ers (with the occasional scanner or shortwave user jumping in to complain that the message has nothing to do with scanners or shortwave). And, of course, whenever the subject of CB comes up in a ham newsgroup, the bitter old (as hams, not age) men of ham radio always jump in to get at least one more lick at the newer hams. This stuff really does get old after a while.

> mad every time I listen to 2 meters [snip]

Then don't listen to 2 meters. Is there some reason you cannot turn the dial to another band? Are you disabled? Did you forget to read the owner's manual? If 2 meters is that bad, then go elsewhere. That shouldn't be too difficult for an intellegent person like you to figure out.

You know, I simply don't understand this animosity towards the newer hams. And that is exactly what this is (animosity towards the newer hams) because I rarely see such complaints about the many troublemakers on HF. It's not like the newer hams are taking anything away from the older hams (older as hams, not age). Before the no-code techs came, the 2-meter band was completely dead. There probably weren't 25 people in the entire country using that band on a regular basis, and the number of VHF ham repeaters could likely be counted on one hand.

However, now that the no-code techs are actually using the band, and have put all those repeaters up, the older hams sit around all day complaining. Its not like the older hams have lost anything - they still have all their HF frequencies. And absolutely nobody is forcing any of these people to listen to the 2-meter frequencies. So I just don't understand what all the griping is about.

Perhaps there is some strange twisted logic at work here. Can you explain it to me, Dana? If you don't like the 2-meter band, and nobody is forcing you to listen to it, then why do you sit around listening to it (like you claimed you did above). More importantly, why do you sit around complaining about it when the situation is so easily solved (don't listen)?

Its still against the rules to talk on channel 9. The channel is still reserved for emergencies, traffic advisories, and so forth.

It is relatively easy to obtain a license to operate a marine radio on land. To do so, you must have a special license, called a marine utility station license (a ship station license is not sufficient). To be eligible for such a license, you must provide a service to marine vessels. In addition, you must show a need to communicate from a coast location. Common coast stations include: marinas, radio repair shops, bridges, locks, and yacht clubs. Coast stations operate under FCC rules applicable to private coast stations, not under rules applicable to ship stations. Coast Guard facilities, and Auxiliary facilities, operate under Coast Guard regulations and are exempt from FCC regulations.

FYI, on April 17, 1996, the Coast Guard suspended enforcement activities concerning FCC Radio Station Licenses carried aboard voluntary ships, except for distress communications and interference with distress communications (voluntary ships are vessels under 20m in length, except commercial fishing vessels and vessels for hire with more than 6 passengers). Today, the FCC regulates marine communications, in cooperation with the Coast Guard (this cooperation includes Coast Guard RDF facilities).

Maybe what we really need to develop is a cellphone *detector*. Something
that looks like a metal detector, but serves to ring any cellphone within a
2-meter radius. You have to go through to get into the theater, and if you
ring on your way through, you don't get in...

I suppose a simpler alternative is to require anyone whose cellphone rings
during a performance to reimburse the rest of the audience's tickets...

>
> Not true at all.

Of course it's true. The 13wpm standard for Generals was in effect from at
least 1951 to 2000. You need to recognize the difference between standards
and procedures associated with those standards. The standards had not
changed in the 30 days between my exams.

> If he didn't think it was needed, why did he bother at all?

My first choice is crawfish at a restaurant. If they are out of crawfish,
I select a second choice.

> Which he could have done before, if it were legal. But it wasn't. He bent the

I wouldn't be surprised to find out that an FCC examiner had also done
something like that in the past. It was a harmless victimless crime.

> > I'm not even convinced that violated the rules.
>
> He did. But I doubt very much you will ever admit that.

Please quote me some proof of violation. My license manual doesn't say
retesting for a passed Morse code exam was necessary.

The fact that the truth is a thorn in the side of the PCTA is why the
argument is relevant. Its relevance helps to alleviate my boredom.
Count the number of PCTA folk who have complained about the truth.

You see, Larry, there a quirk of logic involved. Since the government
requires and enFORCES Morse code skill as a prerequisite for a US HF
amateur radio license, that is prima facie evidence that all US HF hams
were forced to pass a Morse code exam. US citizens who were not forced
to pass a Morse code exam are not US HF amateur radio operators. There
are no US HF hams who used their free will to choose not to meet the
Morse code skill requirements. US HF hams simply had no choice at all.
Whether they felt forced or not is irrelevant.

Sounds like a dumbed-down computer user to me. That's the problem with our society today - too many dumbed-down people too lazy to put out a real effort to improve themselves or contribute anything back.

> [snip] And, I assure you, there is nothing
> about any "newsreader" that I could not
> master [snip]

That's what the techs say about morse code (and license upgrades), but that doesn't stop you from giving them a hard time. Why should we let you off the hook either? Real computer users don't use AOL. And today (with the digital modes), it takes a real computer user to be a real ham.

AOL = No Computer User
No Computer User = No Ham
No Ham = Larry

Sorry, Larry, I just had to give you a hard time over this. ;-)

Here we go again. Lifer Tech Syndrome rears its ugly head. Divert attention from that nasty icky code, unhorse the achievers, and achieve status by trying to buy it. If you can't hack it, denigrate it.

If there is any status in Morse code speed these days, it seems to be in the eyes of those who can't or won't do it.

Sorry... You can take your foot out of your mouth. Granted - I DID
get my Extra AFTER April 15, but I DID happen to pass the 13 wpm
General class license prior, and happen to support code testing
requirements. As a matter of fact, I was well on my way to meeting
the 20 wpm requirement when the reorganization announcement was
released. As a VE I happen to administer the code tests in this area.
BTW, how DOES that toejam taste?

Hmmm... now I'm gonna go feeling all sorry for being mean to you and
stuff... Damn, just when I was enjoying this evil streak of mine!
Oh well...

Thanks for the comments on the "shack." The "shack" is really just a
corner of my office, an office which is occupied more by computers
than radios. The location of the radio gear provides me with a full
180 degree field of view outside, as it's located in a decorative
turret in the 100+ year old Victorian house I call home.

I agree with you on the 7950. Can't kill the darned thing. I use it
to talk on repeaters up to 60 miles away, barefoot, on either a double
trombone vertical or an 11 element Yaqi (full quieting into that
distant repeater on low power with that antenna). Only thing wrong

with this radio is one of the LCD elements in the KHz place fails to darken...

The DX-160 is a recent addition. It's a fun receiver. I guess it can be said that I enjoy vintage (but not antique) equipment - but I've sure got my eyes on the new Kenwood TS-2000! Would like to get into more digital modes....

Anyway... no hard feelings I trust... I argue for the fun of it.. . Besides, I'm an asshole from the beginning - even to my best friends... My bark is much worse than my bite....

They are losing, or lost, the PR battle that every no code Tech has a
burning desire to get on H.F. A surprising number of Tech class operators
don't care for H.F. much. I would dare say that some of the new Hams don't
even consider access to H.F. as the "crown jewel" of Ham Radio any more.

> - they still have all their HF frequencies.

And some like to go out of their way to tweak the noses of no code Techs
about too.

> And absolutely nobody is forcing any of these people to

the
> griping is about.

With more things to do on V/UHF the lure of H.F. has declined a bit. As you
pointed out, in the past with little use of the V/UHF bands, a Tech class
had few choices for stations to work. That's now no longer true.

> Perhaps there is some strange twisted logic at work here.

Yup. The Tech class people are having fun, and some of the OTers are really
bugged about it.

>On the contrary, Vince, Morse code exams are not supposed to
>vary from one month to the next.

Yet another shift of focal point, Cecil? Whether they do or don't doesn't enter into this discussion. The factor under discussion here is that the capability of a human engaged in virtually any human endeavor is going to change from month to month, and even day to day. And the capability to copy Morse is certainly one of those human endeavors.

Take your medications, relax and then re-read what I wrote.

Pay particular attention to my next to last para which I shall re-quote for you in case you have problems with being able to figure out which is the next-to-last paragraph:

">> And that can get people killed if
>> there's even a tiny mistake made."

And then I advocated Farraday cages.

Do you know what a Farraday cage is? From your rather silly response, it sure doesn't appear so.

As far as the FCC goes, you really need to learn what the FCC does as, apparently, you think they're some sort of agency which polices what people say about communications. There are resources available on the World Wide Web that will help you understand. Plus, almost any ham radio operator can explain the FCC to you in detail and nearly all of them will - if need be - speak very, very slowly.

When you type: "Call Phone jammers are illegal for a reason!" (what's a "Call Phone" anyway?), I would suggest that you remember that this isn't the "United States' Wide Web" nor the "Jim Wayda Wide Web" but the World Wide Web.
I would suggest that your statement "Call Phone jammers are illegal for a reason!" would be less ignorantly phrased as "Cell phone jammers are illegal in the United States for a reason".

Incidentally, I would never exaggerate my own importance by crossposting a message across a number of newsgroups ("I am important. hear me roar").

However, I shall answer this message by using the newsgroups in which you mega-broadcast your silliness, you supercilious twit.

When I worked at Intel, a group of us would camp out together. We would
meet at a preset place on a Saturday morning, decide where to camp out,
and head out at a preset time. Somebody was always late and out of range
of CB radios. I talked the entire group into getting their Tech licenses.

We then used a mountain-top repeater to keep in touch with the late
comers and direct them to the camp site. It worked out well but only
a few of the campers saw any use for HF. After all, they had given
up their CB radios and gone to the trouble to obtain Tech licenses
because HF couldn't perform the required function.

One must have an open mind to interpret the regulations correctly. Indeed, interpretations of the laws and regulations are a big part of what lawyers and other legal folks do. Ask Phil Kane.

> Why didn't they just say it in plain English?

They did.

>Why don't you quote the appropriate section for me?

I don't need that much typing practice. You've got more time than me, anyway.
>

>
>If you're not objecting to something evil, why are you objecting
>at all?

Who is objecting? All I did was point out that Shorty bent the rules and lowered the standard for you 47 years ago. Nowhere did I say it was "evil", "bad" or "wrong". Nor did I say that the CSCE system was a bad idea.

In fact, I referred to your examiners as "visionaries" because they essentially did the CSCE thing decades ahead of its time.

I have absolutely no doubt that you would have passed the test the second time, Cecil.
>
>> That's very good. But it doesn't mean you get a "get out of test free"

>
>Of course it's true.

Of course it's not true. The standard is far more than just the speed.

Suppose the standard was changed from "one solid minute out of five" to "thirty seconds solid copy out of three hundred" but the speed was unchanged. Would that be a change of standard or not?

> The 13wpm standard for Generals was in effect from at

The procedures are part of the standards.

> The standards had not
>changed in the 30 days between my exams.

That much I agree with - the same rules were in effect both times. The standards back then were that retesting was necessary.
>
>> If he didn't think it was needed, why did he bother at all?

He blew up his VFO because you like crawfish?

> If they are out of crawfish,
>I select a second choice.

Is crawfish like lobster? Maybe we can set up a bet with W1RFI.

The simple fact is that Shorty probably knew he was supposed to retest you on the code by the strict letter of the regs. That's why he did so. When his equipment unexpectedly failed, he bent the rules by taking a third-party's word on it.
>
>> Which he could have done before, if it were legal. But it wasn't. He bent
>the
>> rules for you.
>
>I wouldn't be surprised to find out that an FCC examiner had also done
>something like that in the past.

Name one. The only FCC official irregularity I have ever heard of is the guy who sold vanity calls many years ago. He went to jail for that, I understand.

Here in Philly, ol' Joe Squelch wouldn't bend the exam rules one tiny bit. No way. When he said you passed, you KNEW you passed.

> It was a harmless victimless crime.

Your calling it a "crime" indicates you have some lingering guilt and shame. There's no reason to feel bad about it anymore - the standard requiring retesting was changed years ago, when CSCEs were introduced.

The situation is somewhat like the person given a ticket for doing 65 mph on a road where the speed limit is 55 mph. But before the ticket is paid, the speed limit on that road is raised to 65 mph with no other changes to the road. Is the speeder still guilty? If challenged, would the court uphold the ticket? I honestly don't know.

>> > I'm not even convinced that violated the rules.
>>
>> He did. But I doubt very much you will ever admit that.
>
>Please quote me some proof of violation.

It's in the book.

> My license manual doesn't say
>retesting for a passed Morse code exam was necessary.

It does if you read the whole thing with an open mind.

btw, note that CSCEs are only good for 365 days (watch out for leap years!!) The FCC has gone after some who have been suspected of altering the date on a CSCE to avoid retesting. In one case I read about, the alteration was a matter of days, yet the FCC enforced the rule that it was no good after 365 days. Even if the test and the standards have not changed, the CSCE is good on the 365th day and worthless on the 366th day.

Morse code is like riding a bicycle or swimming. One doesn't
forget Morse code in one month. It was obviously at the
discretion of the code examiner whether to give a second code
test or simply sign off based on the results of the first test
a month before. I wouldn't be surprised to find out that FCC
code examiners did exactly that for someone they recognized
and remembered. It's just human nature.

Again, stay to the point: there's variability in human ability every day of the year. People who can copy 1-minute solid at one speed one month may not be able to do it at the same speed the next month. That's an absolute fact, not changed by the fact that you were not made to follow that route some 40+ years ago. Nothing you can say alters the fact that there's variability in human response to the point of what you did yesterday you may not be able to do today. And, not counting car accidents and near-fatal experiences and the like, that could be simply because you just don't feel good today.

There's variability around thresholds. Away from thresholds, such
things are binary functions. I was nowhere near the 13wpm threshold
when I took the exam so your statement is uncorrelated to the reality
that existed at the time.

> And, not counting car accidents and
> near-fatal experiences and the like, that could be simply because
> you just don't feel good today.

Well, if you don't feel good today, Vince, stay in bed. I felt fine
when I took my code exam so your statement is uncorrelated to the
reality that existed at the time.

Again, the locals cannot impose "quiet hours".

Quite a few years ago, when the quiet hours authority was
revived/revisited, there was quite an uproar from the ARRL
General Counsel, who claimed that such unilateral imposition
would be a defacto modification of an amateur licensee's
privileges without the required notice and opportunity for
hearing. After much negotiation, it was agreed that it could
only be invoked on an "immediate necessity" basis and then only
until the FCC could investigate the situation.

>BTW- Those weird quiet hours must have been selected in the 30's... :-)

That's EXACTLY when they date from, and the "Sunday Morning"
restriction was to enable AM listeners to hear their church
preachers on the local station. The evening hours were to
enable AM listeners to hear Burns and Allen, Amos n' Andy, and
"Gangbusters" ... <ggg>

There is a section of the Communications Act - Section 4(f)(3)
- that talks about overtine compensation of FCC field engineers
making ship safety inspections. The wording reflects that
Saturday was a workday (which was true up until 1941), and
refers to the Field Engineering and Monitoring Bureau, which
was the name of "the field Bureau" from the early days until
1966 (it had three more names after that until it was morphed
into the Enforcement Bureau a few years back). The wording of
the section was never updated.

Yes it is...the local authority can pass an ordinance that
says exactly what the enabling statute says. Injunction is a
process that can be used to enforce that ordinance.

>Likewise, if they can prohibit outright, what is to prevent them
from doing so during certain >hours of the day?

The enabling legislation does not authorize the locals to do
this. When it comes to delegation of authority (which this is)
if a power is not specifically permitted it's prohibited.

> Wouldn't the operation of a station causing interference be an
>"unauthorized operation?"

No. A 4-watt CB transmitter operated on one of the 40 CB
channels can cause fundamental overload and/or audio
rectification in unprotected home electronic/entertainment
equipment (we proved that in a series of surveys in the 1980s).

In that case the CB operator is "authorized" and the locals do not have any probable cause to invoke the authority to enforce the overpower/off-frequency/unauthorized equipment rules. They do not have delegated authority to require a station operator to make the station available for inspection under penalty for failure to do so, nor do they have the authority to require the station operator to submit to on-air or equipment tests to determine that the equipment is non-compliant.

>If so, wouldn't this paragraph cover electronic
>interference situations when it comes to local enforcement?

The U S Courts of Appeal in several Circuits have all held one after the other that the Comm Act in Section 302(b) specifically grants to the FCC exclusive jursidiction over interference and devices that cause interference. This jurisdiction was not delegated to the "locals".

You trying to tell me that his opponents forgot in one day that Shaq
can dunk a basketball???? So they will leave him unattended under his
own goal???? Please tell me what team you are talking about so I can
bet against them.

Now, now, Kooley, you are being VERY ABUSIVE! Tsk, tsk.

>Come out slugging, and may the best man win.

Kaylie, Vince Biancomano and I have been in correspondence a number of years back. Vince was an editor with McGraw-Hill's Electronics magazine bi-weekly and I contributed a 9-IC PRSG thing to Designer's Casebook (reprinted in Casebook #3, circa 1978). Vince wrote the acceptance letter. Another editor took over shortly thereafter. There was no animosity expressed on either side.

Why do you want to manufacture a dispute? Do you have some primitive urge to do battle? Is that why you expressed a desire to show up at my house to "give me a heart attack?"

How does all that tie in with elimination of the morse code test from the US amateur radio license examination?

>could likely be counted on one hand.

There were quite a few more than "25." :-)

Back in 1977 Harry Terraneau demonstrated a tone-signalled repeater
chain that extended from north of California's Bay Area down the coast
and into Arizona. Devised, innovated, and made operational by radio
amateurs before the advent of the personal computer or widespread
availability of microprocessors. Had an extensive tone-coding scheme
to turn-on a path as desired, a rather thick little notebook carried by
net members. On the first demo Harry coded in the Mount Wilson
repeater from Newbury Park, CA, had a quick chat-hello with a friend
who was mobile in motion in the El Segundo area, enroute to the
Hughes facility there.

Not sure of the network's name then but it has a strong resemblance
to the Condor Net of today.

In 1977 the old-time (not age) hams were still discussing state-of-
the-art HF DX. In 2001 the old-time (not age) hams are still
discussing state-of-the-art HF DX (and haven't left the state).

Back then it was still necessary to learn CW in order to get an
amateur radio license that permitted innovation, experimentation
and fun of trying NEW things by hobbyists. The need to learn
enough CW for a license remained for 14 more years in the USA
until 1991...as if CW knowledge demonstrated to the FCC was
some kind of "necessary" communications skill.

24 years later a bunch of old-time (not age) hams are busy
dissing Technician class licensees because they aren't "real
hams." Maybe that's why the diss is still served hot...

>of the 390.

All second-sourced military equipment is identical. I wasn't aware
that Motorola also produced the '390 series but there is a story
about a cosmetics firm that tried to second-source them...and
wound up buying a few already-built '390s and replacing the
manufacturer's ID plate. :-)

>>The venerable R-390 to R-392 best HF sensitivity is specced

>>
>I have five reasonably decent HF rcvrs/xcvrs including one Collins box
>and in all cases the ssb/cw sensitivities are in the 0.015-0.025 mV
>range.

Sounds like they could use some maintenance and tweaking.
15 to 25 microvolts sensitivity is rather poor.

If you mistyped and meant to say 15 to 25 nanovolts, I think that
the test equipment needs calibration. Thermal noise in a 50 Ohm
system, 500 Hz bandwidth, at room temperature is 10 nanovolts
RMS. That doesn't count a receiver's front-end noise or increase
from mismatching to an antenna or galactic/atmospheric noise.

>Radios like these are not all about "state of the art"
>sensitivity which is a no-brainer and is as often as not a detriment
>to decoding weak HF signals.

State of the art in receiver sensitivity for 5 KHz BW AM and 10 db
signal to signal-plus-noise is about 1 microvolt for tube types,
about 200 nanovolts for solid-state, all on mass-manufactured
receivers. All on HF assuming no mis-matching or galactic/
atmospheric noise, no exotic tubes or semiconductors. Those
figures get better by the square-root of bandwidth reduction and
chilling down the front-end circuitry. More improvement can be
done by post-detection processing.

>To wit: The only way I could finally get
>solid copy out of the three watt French station I worked on 40m cw
>last nite was to crank in 10dB worth of rcvr RF attenuation which got
>rid of a useful amount of crap in the passband.

Sounds like the unattenuated amplification and bandwidth are
too much...or there is too much other noise in the locality. But,
any way is okay as long as it works.

Not sure why working a low-power French station on 40 meters
has anything to do with bootleg operations on 10 meters. :-)

W9WI said:

> Maybe what we really need to develop is a cellphone *detector*.

They already exist. Simply an alert receiver which looks for cell device transmissions such as "auto-registration" signals, and lights an LED or sounds
a buzzer. Commonly used in 'secure' conference rooms, cardiac care units, and similar environments, where sensitive conversations take place, or where 'EMI' from the cell phone transmission could upset sensitive electronics in patient care equipment, avionics, etc. Because they have no audio detection/amplification stages and therefore cannot 'listen' to the conversations, they apparently slide under the radar of "no monitoring of cell phone freq" rules.

Well, Shorty was the one with the open mind. You seem to be
the one with the closed mind.

> >Why don't you quote the appropriate section for me?
>
> I don't need that much typing practice. You've got more time than me, anyway.

Well then, please tell me where it exists in a 1957 ARRL License
Manual. I haven't been able to find it.

> Who is objecting? All I did was point out that Shorty bent the rules and
> lowered the standard for you 47 years ago.

He may have bent the rules. He didn't lower the standard. The standard
was one minute of solid copy at 13wpm. I far exceeded that standard one
month earlier.

> Shorty exceeded his authority.

Since he was the only authority present, I would say he used his discretion.

> Suppose the standard was changed from "one solid minute out of five" to "thirty
> seconds solid copy out of three hundred" but the speed was unchanged. Would
> that be a change of standard or not?

But that didn't happen. The standards didn't change in one month. I
exceeded the standards one month earlier. The procedure was all that
was changed.

> The procedures are part of the standards.

Then why do we have separate words for "procedure" and "standard"?
Invariably, there are a set of standards and a separate set of
procedures for verifying the standards.

> That much I agree with - the same rules were in effect both times. The
> standards back then were that retesting was necessary.

Nope, the procedure may or may not have been that code retesting was
necessary. I haven't found a definitive statement in my 1957 ARRL
License Manual.

> The simple fact is that Shorty probably knew he was supposed to retest you on
> the code by the strict letter of the regs. That's why he did so. When his
> equipment unexpectedly failed, he bent the rules by taking a third-party's word
> on it.

He didn't tell me he was bending the rules. I'm still not sure that he
bent the rules.

> >I wouldn't be surprised to find out that an FCC examiner had also done
> >something like that in the past.
>
> Name one. The only FCC official irregularity I have ever heard of is the guy
> who sold vanity calls many years ago. He went to jail for that, I understand.

That partially proves my point. If it happened and you didn't hear about it,
then the FCC apparently didn't consider it an irregularity. :-)

> Here in Philly, ol' Joe Squelch wouldn't bend the exam rules one tiny bit. No
> way. When he said you passed, you KNEW you passed.

Given all the FCC examiners throughout the US, don't you think there might
have been one or two who recognized a friend, remembered he had passed the
exam with flying colors just a month before, and signed off on the code test
without actually performing a second code test?

> Your calling it a "crime" indicates you have some lingering guilt and shame.

Nope, it doesn't. I smoked pot in the past. That's a victimless crime and
I have no lingering guilt and/or shame. In fact, I wish I had some of that
"one-hit-$hit" that I used to smoke in CA when I was young and foolish.

In 1958, the first "public" 2-m repeater in the LA area (K6MYK on Mt. Lee) went on the air, and we used it for "public service" in relaying election district counts in the gubernatorial election that put Edmund G. "Pat" Brown (Sr.) in the governor's seat. That was both the first election that I voted in and the first repeater that I had used. We certainly had much more than 25 people on that machine at that time and continuing.

In 1961 I relocated to NY and amazed folks back there with tales of the "repeater"...we had at least 25 people on our simplex 2-meter net.

When I returnmed to California in 1963 and used the repeater located in the San Bernardino Mountains we certainly had more than 25 users.....

When I finally went "FM" on 2-meters in 1973 we had more than 25 people on our machine in the San Francisco area.

"Dead"? Hardly.

Nope, I'm assuring you that they remember very well, but they still
only give him credit if he actually does it today. He cannot "pull
a Cecil" and claim credit for having done it last month.

Good luck on this one now!

>status by trying to buy it. If you can't hack it, denigrate it.
>
>If there is any status in Morse code speed these days, it seems to be in
>the eyes of those who can't or won't do it.

Just who is "unhorsing the achievers?" :-)

It would seem that, if there be "horses" then the nags are those who
keep insisting that the morse code test must be kept and inviolate
forever and ever...

If there be "Lifer Tech Syndrome" then it is in response to all those
whose Life is tied up in amateur radio equalling working CW on HF.
Now that's a Real Lifer syndrome if there ever was one!

If you have achieved morse proficiency all by yourself for your own
reasons, fine. Applause. Now explain to everyone why ALL
newcomers to HF amateur radio MUST test for morse code
proficiency at any speed?

Oh, yes, if the morse code test is eliminated, then the Real Lifers
lose their self-perceived "superiority" and are down a bragging point.
Seems to me, Mr. Electric Horseman, that all you and other Real
Lifers have done is to create a virtual steed instead, not a real one.

Perhaps you are saddle sore or your fist is tired from holding onto
the guidon while on this virtual horsie? This isn't a "battle" and
nobody is doing a Charge! blow on Gabe's trumpet because you,
personally, feel the need to keep that code test forever and ever...
because you had to do it.

As another Richard cried, "A horse! A horse! My personal ham
kingdom for a horse!" Poor guy, he couldn't "bring on the empty
horses."

Saddle up, cowboy. Mind them pies in the field.

On the contrary. You are merely an irritant. If I didn't make it clear to you, what I was seeking was a discussion between two of the most highly irritating people here on the newsgroup. And it so happens that each of you argue at complete polar opposites and have never chosen to correspond. I find that mildly curious.
> Is that why you expressed a desire
> to show up at my house to "give me a heart attack?"

Please rethink this remark, Leo as it is disputed by the facts.

Considering that the FCC, not the ARRL, sets the standards for licensing, and such standards are based SOLELY on radio knowledge, I don't see what good such a "letter" would do.... Regardless, someone who is a genius could easily pass any test and still be an asshole, while any idiot can be nice, decent person, so I additionally fail to see how intelligence relates to the "standard of quality" that you're striving for.

Considering that what you want is a morals test, explain to us just how YOU would pass it with such a proposed letter as you stated here?

Maybe I wasn't clear enough in my question. I'll ask more slowly:
why don't you respond to Vince Biancomano posts?

I just think you two are perfect for each other. That's all.

As far as manufacturing animosity, well, I hardly think I need to do
that. You harbor enough of it already.

Jim

>that existed at the time.

You didn't know at what point you were, especially for a true one-minute solid copy test. Second, in a true one-minute solid copy test, at that range you could be off from one week to the next by 5 wpm. Third, again, it doesn't change anything regarding your experiences of not having to take the entire bank of elements over when you should have, which is the focal point of where you want to go with this. You don't need to express any rationale in that regard, Cecil. It's simple enough to say: that's what I did, and tough to anyone who doesn't like it.

Regards,
Vince, WB2EZG

Of course I did, Vince. I had been a Novice for a year by then.
I had racked up thousands of CW QSOs. I could copy 100% at 20wpm.
I didn't start to lose characters until about 25wpm.

> Second, in a true one-minute solid
> copy test, at that range you could be off from one week to the

Which means I could still pass a 20wpm test, far away from the
13wpm threshold.

> Third, again, it doesn't change anything regarding

But I did take the entire bank of elements, Vince. I just didn't
take them at the same time. Since the latest theory indicates
that time, as we perceive it, doesn't exist, your argument is
irrelevant.

Subjective judgement. The same "irritation" remark can be
attributed to yourself.

> And it so happens that
>each of you argue at complete polar opposites and have never chosen to
>correspond. I find that mildly curious.

You are at fault for not noticing a series of message exchanges
between Vince Biancomano and myself in the past. Your
problem, not mine.

YOU are the one at "polar opposites" in a subject thread labeled
"Pride." Is it prideful to attempt antagonizing others and goading
them into verbal fights just because you want "to be entertained?"
That went out with Rome and the Coliseum fests.

In case you missed it, here is the latest score from the
Coliseum: Lions 8, Christians 0.

Yes, we need a cell phone detector.
That way, in cases like a movie theater, we can jam the cellphones ourselves.
Jam it up their butts that is. :)

Couldn't one just modify a cell phone to sweep across the band
with spurious noise? This seems simple enough.

Please excuse an error...that should be 20 nanovolts, not 10.

E-sub-n = 2 x SQRT (R k t Bw) where:

R = resistance, k = Boltzmann Constant of 1.38 x 10^-23,
t = temp in degrees K (about 290 for a 75 F scale), Bw of
500 Hz.

Try the 1954 License manual. I don't have a 1957 edition, so I can't help you
there.
>
>> Who is objecting? All I did was point out that Shorty bent the rules and
>> lowered the standard for you 47 years ago.
>
>He may have bent the rules.

He DID bend the rules.

> He didn't lower the standard.

Yes, he did.

> The standard
>was one minute of solid copy at 13wpm.

The standard was one minute of legible solid copy out of five minutes at 13
wpm, understandable sending at 13 wpm, AND a passed written test - all as part
of the same exam sequence. The standard consisted of all those parts, not just
some of them.

> I far exceeded that standard one
>month earlier.
>
You met the requirements of the one minute at 13 wpm. You did not meet the standard of the General license. And part of the standard was that a prospective ham didn't get credit for previously passed tests if those tests didn't result in a license or an upgrade.

>> Shorty exceeded his authority.
>
>Since he was the only authority present, I would say he used his discretion.

Nope. His authority was extremely limited. He exceeded it.
>
>> Suppose the standard was changed from "one solid minute out of five" to
>"thirty
>> seconds solid copy out of three hundred" but the speed was unchanged. Would
>> that be a change of standard or not?
>
>But that didn't happen.

That's not the question. The question is "would that be a change of standard?"

>The standards didn't change in one month.

Agreed. The standards were the same - your examiner did not follow them.

> I
>exceeded the standards one month earlier. The procedure was all that

>>
>> Name one. The only FCC official irregularity I have ever heard of is the
>guy
>> who sold vanity calls many years ago. He went to jail for that, I
>understand.
>
>That partially proves my point.

How? The guy who sold calls was not an examiner, as far as I know, he WAS
caught, and the FCC made a big deal of it. The whole vanity call thing was
disrupted because of it.

> If it happened and you didn't hear about it,
>then the FCC apparently didn't consider it an irregularity. :-)

In other words, you cannot name a single case where an FCC examiner bent the
rules.
>
>> Here in Philly, ol' Joe Squelch wouldn't bend the exam rules one tiny bit.
>No
>> way. When he said you passed, you KNEW you passed.

Would work for me, luv it! I've actually experienced the problem.
Popped $110 for a couple seats at the Philadelphia Academy of Music to
take in what I thought would be a nice Saturday nite with Swallisch
and the Philadelphia Orchestra. Dontcha just know some asshole nuevo
yuppy two rows back got on his cellphone FOUR times during the
concert? Answered two incoming and initiated two outgoing calls and
yakked his brains out about his Sunday golf outing. People left in
disgust. He din give a shit. Prolly drives an Expedition, too.
>
I think the Academy seats something like 4,000 and it's always sold
out. If we assume a $55 bucks a pop per seat that dipshit's fine for
using a cellphone during a concert works out to something like getting
tagged for $220,000 for yakking abt his golf date.

That's breathtakingly incorrect. The no-code Tech license came to be in 1990. The 2-meter band has been home to thousands of repeaters and a huge amount of activity since the late 1960's. I'm sure plenty of no-code Techs have participated in establishing and maintaining repeaters during the last decade, and more power to them. But the amount of activity at VHF and above prior to that was tremendous, and to say that VHF repeaters exist because of no-code Techs is just a complete distortion of history.

Does anybody know the procedure for having an individual removed from the news groups if they are as caustic as this "gentleman"? This type of abuse and attacks are totally uncalled for. It is one thing for people to have a little fun with matching barbs but this individual and others are stretching the avenues of freedom of speech beyond civilized limits. How dare he be allowed to character assassinate with the ugliness of a devil. There must be a place to report him besides the "abuse" center.

And One does not expect to produce quality anything by sending such garbage to the FCC or the ARRL. W9FPJ

Yup.

The main opposition to "private" non-marine-business coast
stations (called "kitchen coastals" on the West Coast) was the
Telcos who ran the Public Coast (Marine Operator) network.
With the advent of cellphone service their business (and
opposition to kitchen coastals) went away.

The FCC hasn't yet gotten around to legalizing kitchen
coastals but give it time..... <ggg>

No they can't. The federal legislation allows the locals
to enforce the federal rules. The city can't change the
federal rules, nor can they change the burden of proof
and other aspects.

> If the neighbors are
>willing to come to court and testify (as they must now do in dog

If we limit our discussion to your example, that
wouldn't fly. The missing element would be
what, if anything, was the CBer doing illegally?
Just operating CB doesn't cut it in this case anymore
than a ham being accused of interference.

>A similar situation happened to a ham recently (as discussed earlier
>here), and they didn't even need to make new law to take him to court.

Who took the ham to court? Where? What was the charge?
What was the outcome?

>As far as the legal equipment argument goes, the FCC can impose quiet
>hours on a *legal ham* now if he can't work things out with his
>neighbors. The city could easily make such a law to do the same thing
>to a CBer...

The city can not operate on that basis from anything I have
read about this law. You are extending the power of
enforcement far beyond the legal boundary that the
legislation supports.

As to the FCC setting quiet hours on legal hams, that
is a very "rare" situation and I have not seen or read

of that being done at all in many years.

Cheers,
Bill K2UNK

I'm sure Phil will point out that the first order of proof
is that any specific equipment is, in fact, "equipment
NOT (emphasis added) authorized by the Commission."
That is the point in needing trained personnel to be
able to accurately make such a determination as to
the illegality of the equipment...AND then to be able
to convince judge and jury that it is so.

> Likewise, the bill went on to say...
>
> "(B) A regulation that prohibits the

NO! Not anymore than a ham station doing the same
thing. The proof required is to be able to first
determine the specific operation of the CB station
as being illegal (unauthorized equipment, modified
equip., unauthorized CB frequency, etc.).

> If so, wouldn't this paragraph cover electronic
>interference situations when it comes to local enforcement?

Again, see my comments above.

Cheers,

What are you smoking? I have been on 2 meters since the early sixties. I have 40 states confirmed, about 150 VUCC grids (many more pre-1983), Worked All Continents, and quite a few other DX contacts. The states worked and the DX were all pre-1983 and there were probably a couple of hundred stations within easy tropo distance on the air at any time before1990 when no-code began. This from the VHF black hole of Southern Arizona.

If there were only a handfull of repeaters on, that would be wonderful as far as I'm concerned. That might actually teach many of the newer hams that it is actually possible to have a QSO without using an active repeater. Did you know that?

Furthermore, the argument for no code was that the code requirement was keeping out "technically-minded" folks that wanted to experiment, but thought the code requirement was silly. What did we get. For the most part a bunch of wives that use a FM handheld and a repeater to keep tabs on the OM and a lot of hikers, hunter, fishermen, etc. What "experimenting" and improving of the state of the art are these folks doing?

In article <3ab05066.79688699@news2.dvol.com>, kelly@dvol (Brian Kelly, w3rv) writes:

>For blatently obvious reasons. Let's not forget the Motorola versions
>of the 390.

Motorolas are usually prized because of quality construction and the use of components that fared better over time. Collins-made ones often have wiring harnesses whose insulation is cracked and failing.

Because those receivers are modularized, typical ham ones often contain modules from several different manufacturers.

How about the R-390A, a design from 1954. Granted, it's not a typical ham receiver, and they are big boys, but they are common enough to be readily available for far less than $1k. And they are pretty good, as demonstrated in a series of articles by Ray Osterwald, N0DMS, in Electric Radio (1991).

He first measured the performance of a stock 1956 Motorola R-390A. He got these results:

MDS (3 dB rise over no signal condition): -127 dBm at 2 kHz bandwidth, -147 dBm at 100 Hz bandwidth

Input for 10 dB S/N ratio: .44 uV (-117 dBm) at 2 kHz bandwidth

Blocking dynamic range: 72.1 dB

2 tone 3rd order dynamic range 52.7 dB

He then did some mods to the AGC and IF amplifiers, using better tubes developed in the early '60s. The results are shown below:

MDS (3 dB rise over no signal condition): -130 dBm at 2 kHz bandwidth [3 dB improvement over stock]

Input for 10 dB S/N ratio: .2 uV at 2 kHz bandwidth

Blocking dynamic range: 105.2 dB [33.1 dB improvement over stock]

2 tone 3rd order dynamic range 82.8 dB [30.1 dB improvement over stock]

Finally he modified the RF section to use better tubes in the mixers. The final results are as follows:

MDS (3 dB rise over no signal condition): >-150 dBm at 2 kHz bandwidth (limited by test setup) [>23 dB improvement over stock]

Input for 10 dB S/N ratio: .022 uV at 2 kHz bandwidth

Blocking dynamic range: 123.5 dB [52.4 dB improvement over stock]

2 tone 3rd order dynamic range: 101 dB [48.3 dB improvement over stock]

Pretty good for a design from 1954, updated with tubes from the mid-60s. The R-390A is a multiconversion general coverage design. A ham bands only design could do even better.

Numbers are from Electric Radio for May and June of 1991. The tubes used are relatively common TV types and the mods consist mostly of changing resistors.

Note that most of the numbers are for SSB bandwidth (2kHz).

But for typical ham use, I'd rather have a 75S3B, for a whole bunch of reasons.

For a chart listing many typical ham receivers, see:

http://www.sherweng.com/table.html

The 75S3 MDS is rated at -141 dBm

>I have five reasonably decent HF rcvrs/xcvrs including one Collins box
>and in all cases the ssb/cw sensitivities are in the 0.015-0.025 mV
>range.

Once you get below a microvolt or so, external noise usually dominates on HF unless the antenna is very small or the location very quiet.

> Radios like these are not all about "state of the art"
>sensitivity which is a no-brainer and is as often as not a detriment
>to decoding weak HF signals.

AMEN! The real problem is often picking the 1 uV signal out from between the hordes of 100,000 uV signals.

>To wit: The only way I could finally get
>solid copy out of the three watt French station I worked on 40m cw
>last nite was to crank in 10dB worth of rcvr RF attenuation which got
>rid of a useful amount of crap in the passband.
>>
All sorts of IM products to deal with. A case in point of the above problem. One reason why the published numbers are only a starting point, and why designs from decades ago can outperform many "modern" ones.

So Vince, during an emergency, are you and your family going to refuse
to be saved by an amateur radio operator who doesn't measure up to your
standards for quality? As far as emergency amateur radio operators go,
seems to me that halitosis is better than no breath at all.

Check back a couple of postings in the thread, Steve. You will see
that the context was explicitly defined as US HF hams. English is
not a context free language. It is impossible to define the entire
context in every posting. If you don't take the time to understand
the context you will continue to make stupid blunders like this one.

Right off I'm as anti-regulation as anybody can get. We all know that
in many instances the alternative to regulations is various forms of
behavioral anarchy.
>
Plymouth MN where you live has only 18,000 plus souls in residence. In
an 86,943 square mile state with a population of well under five
million. Politeness and civility work in relaxed enviornments like
yours for reasons which have been demonstrated many times over.
>
Cometh Hong Kong with a mind-boggling 7 million people packed into a
total of 422 square miles. You've been to NYC, you know that people
behave much differently in NYC than they do in Plymouth. When you have
people densly packed together they tend to be less friendly and
civilized and sometimes regulations have to be imposed to contol
rudeness. Like California has done with their smoker's bans. Hong Kong
has the highest number of cellphones per capita in the world by a big
margin and they're causing problems you don't have in Plymouth. They
have an out-of-control situation and they're reining it in.
>
As the populations everywhere mushroom over the years you're gonna
see more regulation of this sort before you see less. Has nothing at
all to do with Bejing or Chinese politics. Next up for cellphone bans
could just as easily be NYC or Rome as it is Hong Kong.

Okay, I guess that makes sense. I'm not a lawyer, so you have to include things like this in your explinations.

>> Wouldn't the operation of a station causing
>> interference be an "unauthorized operation?"

> equipment tests to determine that the equipment
> is non-compliant.

If I understand you correctly, you're saying that the local cop cannot possibly inspect a station based solely on an interference complaint - the local would first need evidence that the the equipment is illegal. If that is so, then HR-2346 would be absolutely useless - it does nothing because the only way a local is going to become aware of a situation is when an interference complaint is made, but then they cannot do anything about that complaint because they have no proof that the equipment is illegal. That just doesn't make sense. Something has to be missing (and I think I know what it is - see below).

>> If so, wouldn't this paragraph cover electronic

> delegated to the "locals".

Isn't there a rule that requires an operator to make his station available for inspection upon request? If so, and if the local cop is operating under delegated authority of the FCC to enforce HR-2346, wouldn't this allow the local to inspect a station when an interference complaint is received in order to determine if the equipment is non-compliant?

EXACTLY correct, sometimes people should check what their saying before
putting it down in print. I was on a couple of 2 meter repeaters in the
60's. In 1967, I was on the tech committee for one, over 100 active members
on that one alone, so there was lots of activity prior to the no code folks.
Certainly has dwindled down last 5 yrs or so and I would think the Internet
is the biggest factor, but could be wrong

768. Save the ionosphere

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-16 18:47:37 UTC
From: K0HB@arrl.org
Message-ID: <98tn49$fn7$1@news.netmar.com>
Source record: 4946
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

About twenty-eight years ago on August 4th, 1972, the Ap index hit 223,the ionosphere was bombarded with all sorts of solar particles with hard-to-pronounce names, and amateur radio was at it's peak. It has never been that good since.

Also, on that same date, titanium dioxide was first released in a commercial product. It has led inexoribly to the decline of amateur radio as we know it. Titanium dioxide is directly responsible for the decline of the Ap index, and the resultant decline of amateur radio. It has also led to a horrible decline in well tanned girl torsos at the beaches of the world.

In the late 60's a group of induhviduals who were rankled by the advent of incentive licensing looked for a way to ruin propagation and thus amateur radio forever. Since propagation depends on a solar component known as freckles-del-sol (better known as sunspots), a means of stopping sunspots would destroy would destroy amateur radio.

The group discovered the sun-blocking power of a natural chemical called titanium dioxide, but they needed a way to deploy a thin mist of the chemical into the upper reaches of the earths atmosphere. Since it could be dispersed by evaporation, these diabolocal fiends found the perfect means of sending it skyward.

First they quietly obtained virtually the entire world supply of titanium dioxide, and then they started a rumor in the medical world that the tanning rays of the sun could actually be harmful. Incredibly, in 1972, people would believe anything.

Literally millions of bikini clad ladies, even on Gilligans island, were panicked! After all, it was August, the height of the swimsuit season, and most of them had not nearly amortized their investment in the latest Jantzen bikini, or partial bikini. What could they do?

Meanwhile, the titanium dioxide Cartel had formulated a mixture of their chemical and coconut oil and put it on the market as not only a sun-blocker, but also a means of replenishing critical skin oils depleted by exposure to the sun.

Millions of bikini-owners flocked to purchase the new sun blocker, spread it lavishly on their bodies, and returned to the world beaches. Little did they know the horrible ravages they were inflicting on the E and F layers of the ionosphere, as the gruesome chemical evaporated from their skin and rose into the skies of the world,

from whence it ruins propagation on a global scale.

Hams, UNITE! Help take back the ionosphere! Be part of the solution,
not part of the problem. Visit your local beaches today and check
the skin of everyone for traces of this harmful solution. It can be
easily detected by it's characteristic coconut smell, and even small
concentrations are dangerous. Carefully sniff all bodies on the
beaches for traces of this chemical. If detected, throw the offending
person in the water to dilute the effects, and burn on the spot
any garments known to be contaminated.

Save amateur radio....

.....to the beaches, now!

It is possible for them to do what the FCC does (they wanna
play, they gotta follow the rules of the game) - make external
measurements of frequency and an estimate of apparent power for
"probable cause" purposes, but this takes an experienced and
qualified observer, df equipment, calibrated counters/receivers,
and field strength equipment with calibrated antennas -- and a
knowledge of what and how to apply all the "fudge factors" in
the operator's favor when making those measurements.

>Isn't there a rule that requires an operator to make his station available
>for inspection upon request?

These is a section of the Comm Act (303(n)) that gives the
FCC authority to require that an operator make the station
and its equipment available for inspection, and failure to do do
can result in criminal and administrative penalties under
Sections 501, 502, and 503 of the Comm Act. None of these
procedural powers were delegated to the locals.

>If so, and if the local cop is operating under
>delegated authority of the FCC to enforce HR-2346, wouldn't this allow the
>local to inspect a station when an interference complaint is received in
>order to determine if the equipment is non-compliant?

The way that the locals will make the vast majority of
inspections is "by request" just like they do for other
things....fear of the police operates then. If they can get
admitted into the house legally, equipment in "plain sight"
becomes available for inspection if they have reasonable cause
to suspect a violation. Interference with HEEE is not
"reasonable cause".

Wouldn't the titanium dioxide just float on top of the ocean and
"evaporate" anyway? ;-)

I'm just developing a yen to try that game, been reading about it and
antenna modeling is very similar to modeling structures which I do
know something about. Garbage in = Garbage out. Real-world antenna
modeling involves a lot more imponderables than structural modeling.
How does one model the effects trees have on atennas when one strings
a wire thru seven of 'em? The answer is ya don't bother.

The current crop of tuna-tin rcvrs are pretty sophisticated little
suckers, they work surprisingly well. Damned sight better than the
regens and low-cost Hallicrafters stuff I had back when I got into the
game. Does not apply to $49.99 CB xcvrs.
>
>>That's correct and that's why there are no $49.99 ham xcvrs out there.

You're absolutely correct and I gotta retract that comment with
respect to "there are *no* $49.99 ham xcvrs out there". There are qrp
kits out there for under $50.
>
The least expensive plug 'n play HF ham xcvr out there that I know
about is the lame 25w Radio Slack HTX-100 10m single-bander which
sells for $149.99. Slightly factory boogered CB ssb xcvr with a key
jack, basically.
>

The current MFJ qrp xcvr kits are out there for $190 a pop per band
and Ten-Tec offers similar kits for about $100.
>
>All second-sourced military equipment is identical. I wasn't aware
>that Motorola also produced the '390 series
>
390 types came from everywhere. Collins built only 1,281 out of the
54,276 390/390As produced between 1950 and 1986. Motorola delivered
14,324, Electronic Assistance Corp. built 10,717, buncha others like
Stewart -Warner, Teledyne and a flock of no-names did the rest.
Hammarlund built 118 ham/swl/commercial versions.
>
DoD bitched mightily about the cost of the original 1950 390 so
Collins went back to the drawing board in 1951 and came up with the
1951 390A design which is a scaled-back cost reduced version of the
original 390. 26 vs. 32 tubes, etc. The A model is by far the more
common version and is supposedly a better performer than the 390.
>
> but there is a story
>about a cosmetics firm that tried to second-source them...and

>
What the hell, why not an Estee-Lauder 390? Had to smell better than
anything Mr. Collins ever built. Nobody knows how many were actually
built or who made 'em all. There were overseas & domestic knockoffs,
yeah, ID plate scams, refurbs sold back to DoD as new units, etc. The
390 program won several of Proxmire's Golden Fleece Award honorable
mentions.

Yeah, that's it, I need a bottle of liquid nitrogen so I can and pipe
it into my radio and chill the RF stage . . maybe run it over to the
PA trasistors instead of buying an amp . . .
>
> More improvement can be
>done by post-detection processing.
>
All of the above goes down the pipe when there's a wayward light
dimmer in the next room.
>
>Sounds like the unattenuated amplification and bandwidth are
>too much...or there is too much other noise in the locality. But,
>any way is okay as long as it works.
>
Combination of deficiencies, too much bandwidth was one factor but the
worst is/was the overanxious AGC responding to strong electrical
noise. Reducing the front-end sensitivity knocked down the noise
spikes before they got to the AGC which overreacts and triggers gobs
of negative system gain when it gets fed too much signal for it's
taste. Takes milliseconds for the AGC to let go of the gain of course
and when it does finally let go here comes the next freakin' spike and
around we go again and ya hear nothin' except the AGC trying to kill
the noise.
>
Net result was that by putting a "20 dB resistor" (not 10dB) in the
antenna was kinda like I fed the AGC some lithium and calmed it down
and then I was able to copy the guy.
>
The radio has a noise blanker, that helped some and it has some sort
of IF-level post-processing circuit called an "automatic intercept
point", I can't figger out what it is but it operates like a noise
blanker on steroids under certain types of noise conditions. I didn't
switch it in when I worked the French guy, should have done that.The
radio is a little underdash mobile rig, I'm pushing it's limits by
chasing qrp Frogs in noise on 40.
>

No troll, it happened. The LAPD TV link license will be cancelled
effective Dec. 1 this year unless the LAPD causes interference to hams
on 2.4Ghz in which case the FCC will yank the license on the spot.

No Dummy,

Ti2O combines with H2O to form TiH4O which is so heavy it sinks to
the center of the earth. Damn, do I hafta show you how EVERYTHING
works?

Sheesh!

Well, smarty, what happens when so much TiH4O collects at the center of the Earth that it achieves critical density. Isn't that how the Sun was created, and why it has a white glow?

It's about time. Now, all we need is to get rid of all those cordless phones
baby monitors, and [stock] video senders that keep jamming my repeater's input
on 2405.000.

Wasn't the problem, not with this little TS-50, much to my surprise it
seems to be as as good as any radio I've ever used in this respect.
Haven't run into so much as a hint of IMD yet and I wuz in the piles
on 80cw in the contest which is my real world front end linearity acid
test. I have no reason so far not to rank this little mobile rig's
front end right up there with the 75S-3B's front end. Absolute fact.
>
The problem was local electrical noise which grabbed the agc. I
cranked in the attenuator which tamed the over-aggressive acg which
then allowed me to hear Frenchman.
>
It has a circuit/thingey called an "automatic intercept point",
whatever that is, the manual barely mentions it. I didn't pay any
attention to it until yesterday when I finally dug into it. It's

effect is sorta like a super noise blanker which is quite effective on
cw. 'Way better than the noise blanker. If I'd switched it in when I
was working the F6 I woulda had it made.
>
>One reason why the published numbers are only a starting point, and why designs
>from decades ago can outperform many "modern" ones.
>
Sure, some of 'em can and I was sure as hell no fan of the early solid
state rcvrs. HRO-500: Whatta crapper! I now have some solid experience
with three current (+/-) solid state mid/high end rcvrs and they're
all really decent, I don't have any major performance squawks even
with the TS-940 which is a 20-year-old design. There's no question in
my mind that today's solid state gear is very much up to snuff as far
as performing as well as any of the tube-type radios ever did or can
do. Not counting cheap clunkers of either type. Top-notch solid state
front ends have arrived. When you add all the additional tricks the
new radios do there is no contest and it can only get more so.

No, Leland, no one is "bugged" about that. Many of us have dedicated a
huge amount of our personal time to help make that happen, in case you
didn't know what a VE does.
What many are "bugged" about is the lowering of requirements,
especially for the highest class of license. Nothing more.

Now now, Dick...

In all fairness to Mister Anderson, he agreed that 2-m wasn't
dead...follow the quotes above backwards and you'll see that it
was someone else who said that. My point was that 2-meters
was alive in the Soiu Cal area long before 1977.

Dwight:

Why do you feel I have a "superior attitude" because of the morse (sic)
code? I've said, repeatedly, that it is a proven fact that people from
all walks of life, surely people both much less and much more intelligent
and talented than I am, have mastered the Morse code with no
difficulty. I don't think I'm anything special at all as a ham, certainly
not because of my ability to pass a 20 WPM code test. I'm just an
average guy who achieved a thing which is well proven to be achievable
by average people. Whut's yer pernt?

Ray:

I've never taken anything said in this newsgroup personally against
the sender; I consider this to be a hobby (just like ham radio) and
I entertain myself by participating here. What I say when I'm making
statements about my personal feelings on a particular policy issue
are my true thoughts and feelings, but there is a lot of rhetoric and
ego-induced posturing that I'll admit is tongue-in-cheek, while others
won't. Nothing said here is going to influence any policy decisions
anywhere it counts; all we're doing is honing our arguments for the
time that we present them to the FCC, ARRL, or other legitimate
agencys that DO effect change in the ARS.

Any and all participants in this newsgroup are people I've come to
think of as special friends over the years, regardless of our
differences of opinion. This is America; you get to disagree with
me, I get to disagree with you, and we both get to keep living!
Therefore there's no need to feel guilty for something every last
one of us has done in the safety of our own home while looking
at a monitor and pounding a keyboard.

BTW I also have the multi-mode "brother" of the Kenwood TR-7950,
the TR-9130. It is mainly my own home station packet transceiver
lately, and has been parked on the PacketCluster freq. for the better
part of two years now. Only thing is, I've had this one 2 years longer
than the 7950; purchased it at the Gaithersburg (Maryland) hamfest
in Sept '82!

Cecil:

OK, so WHAT if I was "forced" to take a Morse code test? Was I
also "forced" to buy all the stuff that goes into my ham shack, and was
I "forced" to use it on the air? Am I being "forced" to make CW QSO's
simply because I was "forced" to take the tests, "forced" to succeed
at them, and "forced" to take the privileges that went with them?

Again, Cecil, please explain the R E L E V A N C E of the word
"forced" in the context of the Morse code testing requirements. You
still haven't done that. I don't give a rats a$$ about the definition of
the word. I know what it means. I just want to understand what you
are trying to say with regard to this "force." I want you to explain how
this "force" has meaning to the average citizen who VOLUNTARILY
takes it upon himself to acquire the knowledge and skills necessary
to become a radio amateur in the United States or anywhere else on
planet Earth. I'm sure there must be an agenda hidden in all that
quibbling somewhere, and I'm not willing to wait until July to finally
pry it out of you. Give. Now. Please! Shit or get off the pot!

The local operators of TV channels 15-19 will not be impressed nor will the areas where the freqs are used for S and T band (essentially the 450-470 UHF band repeated). The mudducks you step on may well be the local gendarmarie. They will be less than impressed as well.

And much more interested in finding the source. Our primary talk-in
repeaters were and are on that band, as are lots of others.

Seems to me 27MHz lies within that range. Is 7MHz HF? Is 4MHz HF?
Is 29MHz HF?

It has everything to do with HF configurations not being able to
deliver the required performance. Along with CW, has HF also become
such a religion that nobody can admit that VHF/UHF repeaters have some
advantages over HF without repeaters?

> I "forced" to use it on the air?

Nope, you are not required by circumstances (forced) to buy any ham
equipment and you are not required by circumstances (forced) to use
it. However, you, as a US HF ham, were required by circumstances
(forced) to pass a Morse code exam.

> Am I being "forced" to make CW QSO's
> simply because I was "forced" to take the tests, "forced" to succeed

After all, you can always manipulate the truth with wordmeistering as
you continously do here.

If you don't believe that a ham who can work CW at 20wpm is more qualified than a ham who can't that's your problem. But it's not the truth that you profess to love.

I think in such a blatant case, a more dramatic solution might be in order.
Like maybe getting the folks in your part of the hall to join you in getting
the conductor's attention & asking him to pause the performance -- then
publically explaining exactly *why* you need the orchestra to go back a few
minutes & start over.

Alternatively, get the offender's phone number, call him, and tell him a
close relative has died...

How often does a phone "auto-register"?

It seems to me like something that would take too long to identify who's carrying a phone. If the offenders have a couple of minutes between transmissions, that's plenty of time to get past any checkpoint (without even trying) and into the hall. Even if they stay in a lobby long enough to get detected, by that point it's awfully hard to tell *which* patron is offending.

The point is that VHF/UHF has some advantages over HF, Dick.
Mountain-top repeaters around the Valley of the Sun are one
of them. No HF frequency would do what we needed done unless
there were HF repeaters and there were not any. The only reason
most of those campers got their Tech licenses was to be able
to have reliable 2500 square mile full-time coverage. There's
no reason for those guys to want to get on HF, therefore no
reason for them to want to upgrade. A few of them who have
moved away from the Valley of the Sun have become interested
in HF.

Agreed! My point was not to recommend them, but simply to show that the usable limit of HF receiver sensitivity was reached many decades ago. Many hollowstate designs using 40 year old technology are still very competitive in dynamic range, selectivity and sensitivity.
>>
>>Pretty good for a design from 1954, updated with tubes from the mid-60s. The

Trickle-down effect. The technology developed for the top-end sets winds up in the cheaper rigs eventually. Just like some of the work done to develop the IF system of the $700 SX-88 in 1954 wound up in the much-cheaper S-76, SX-96, SX-100 and SX-101 a few years later. Collins is an even better example.

TS-940 was a topend set for years.

>There's no question in
>my mind that today's solid state gear is very much up to snuff as far
>as performing as well as any of the tube-type radios ever did or can
>do. Not counting cheap clunkers of either type. Top-notch solid state
>front ends have arrived. When you add all the additional tricks the
>new radios do there is no contest and it can only get more so.

Yes and no.

Depending on the op and the tricks, many of them can be a waste of time and technology. How many of those tricks never get used because they are hard to access? In a typical SS contest, the game for most of us is to slowly tune through the band looking for new ones. Most of the tricks don't help with that.

One real problem with the new rigs is their short useful life and nonrepairability. Many newer sets use ASICS "application specific integrated circuits" and other parts. If one of those fails in an older set that isn't supported by the manufacturer, good luck getting a replacement. One solution is to look for junker sets, but that can be an expensive proposition. Rigs like the S line were made over such a long time period and in such quantity that parts and documentation are everywhere. Not so with, say, the TS-930.

End result is that the manufacturers WANT us to become "consumers" of their products, and to keep buying new ones every so many years. Can't balme them - it's just Marketing 101.

Oh, I agree completely. Words meam what they mean. It's left up to the user to abuse the Englislh language by misusing them erroneously and completely out of context as you do, thinking that all those other dumshits don't know what you're doing. In fact everyone reading here knows.

Fact is people are forced. Forced to make a choice. Do I learn Morse code and pass a test on it, or do I just abstain from HF ham radio? To this day there has never been anyone who was ever forced to learn Morse code, for any reason (outside the military). It was always their own personal choice. End of story, although you will be "forced" by your own ballooned ego to continue it ad nausuem.

C'mon Dick. The first thing that all advanced civilizations do in the
golden era sci-fi stories is replace English with some form of Newspeak to
eliminate these senseless internal contradictions. Dictionaries are the
simple listings of English as She is Spoken or Written. Do people speak
or write with precision always laying out the context? Not bloody likely.

So words in dictionaries get divorced from context. The classic example
is 'fix' which outside of its context can mean anything from a repair job
to the preparation of a mortuni to film development to a heroin injection
and many stations in between. Forced is just one of those many words that
are context-dependent and are generally used where choice does not exist
or is binary. If I have one amp flowing thru one ohm, one volt is
'forced' by the system; independent variables 'force' dependent ones. No
one is holding a damn gun.

If I want a General ticket I take a code test. Binary choice. Only the context forces a damned thing.

Language expresses ideas but to some extent also causes or prevents ideas. As is often noted there are no direct English translations for Weltanschaung (?) or Weltschmertz from the German and no German word for 'sportsmanship'. Try New Testament Greek where 'religion' and 'superstition' are the same word.

Cecil is playing mind games. So let him play them. You are not 'forced'.

May the Shwarz be with you.

Dick BK

An addition or three. Harry Terraneau is WA6SXR. The "Condor
Connection" is on the 220 band, is a network of 15 repeaters
stretching from San Jose to San Diego, along the Pacific Coast
and also through the San Joaquin Valley, reaches into Las Vegas
NV, and Kingman, AZ. To find out details see -

www.condor-connection.org

According to this website, the Condor Net started in 1978. As
close as I can remember Harry did his little demo from inside
the Teledyne Electronics (Newbury Park, CA) facility in 1977.
We were both employed there 1977-1978. I thought it was on
2 m and 70 cm but did not record the fact for all posterity (and
posteriors that wish to comment).

The demo I got involved tone-coding selection of a PATH along
the repeaters to any other repeater, along with an elaborate
set of tones for many and varied purposes. Whether that was
the beginning of Condor or another network, it was very
impressive in demonstrating the innovation and engineering of
a network in days before PCs and wondrous little ICs that
were sub-systems on a chip. The organization alone is a big

feat and was accomplished before Internet days let everyone
(with access) communicate by e-mail with others.

>> >> In 1958, the first "public" 2-m repeater in the LA area
>> >> (K6MYK on Mt. Lee) went on the air, and we used it for "public
>> >> service" in relaying election district counts in the

Mt. Lee is the only tall location I can see from a corner of my
yard in these Verdugo Hills. Today it has all sorts of parabolics
on it plus other little structures for commercial communications.

In 1958 the first public repeater in L.A. was an excellent
pioneering effort and showed dedication to the tens of
thousands of radio amateurs who lived and still live in the
greater L.A. area.

Two meters, 220, and 70 cm were all being experimented with,
thanks to a number of amateur radio enthusiasts who were not
continually rerunning the 1930s pioneering efforts 40 years
later.

> You're so right Phil, I misread the multiple level attributions. I

I have just gone through a few pages of legal BS to find out all I can about antenna restrictions and the law, both ham and non-ham antennas. What has the FCC done as far as the restriction of external TV antennas? Can they be restricted by covenants? I know many beam antennas look like TV antennas.

I live in the worst place for any kind of "property modification" The Nazis are out in full force around here. I live in a regular house, not a rental or a condo yet I can't put up a single thing. The head of the neighborhood association lives right across the street. My property is downright crappy for any kind of antenna installation. The highest tree, an evergreen, is at the edge of the property and the guy that lives behind me is a psycho when it comes to the covenants. All the others would require tons of coax, underground runs, etc. There really needs to be something done about this. I am a teenager so I can't really go find another place to live. I have tried attic mounted antennas, the Ventenna (which won't fit over any of my vent pipes without being seen) and a variety of other things that should work but won't. Any news on new regulations regarding Hams and covenants?? Something really needs to be done about this.

If you type 0181 (I use the keypad) while holding down the ALT key, the mu
should, as if by magic, appear on the screen.

The µ is ALT 0162
The integral is 0131
0176 gives °
0177 yields a very useful ±

I use 0216 for Ø

Well the local would (IMHO) at least need a search warrant
to gain access. Perhaps the interference complaint may be
enough for a judge to order a warrant in some cases. Once that
is done, howeever, just what can the local do anyway?

I await Phil's interpretation. My guess is no. Indeed, what if
the person simply states to a cop...I don't have any station
at all. On what basis then does the cop gain access...assuming
he had such delegated authority?

Cheers,
Bill K2UNK

Do you have an attic. Try an HF dipole in the attic for 15 and 10m.
I've worked many states and countries with just such a simple
set-up.

You can also do a small beam for 2m in many attics.

Try moble operating with an antenna on a motor vehicle.
You could connect it to a rig inside the house too (as
long as no one decides to get in and drive it away
while you're connected to it.)

Whatta ya wanna bet that anyone who is nailed on this can hire
me to beat the rap hands down?

Now you see why I am so dead set against giving "locals"
blanket authority to enforce radio regulations? I would have
rather see that instead of saying that the FCC is available to
advise local law enforcement agents, that no department or agent
could enforces this pseudo-FCC stuff unless they were certified
by the FCC as qualified to do so. I'd love to run and teach
that program.

One phone call to the city/county attorney should do it......if
they don't drop the matter at that point, they're open to big
damages under Section 1983 - violation of civil rights by a
state or local government under color of authority - in plain
language, when a local or state government attempts prosecution
when the law doesn't grant them that authority. This is the
catch-all section under which most of the large post-arrest
settlements are made.

I do that for a living and it takes more than "a few pages of
legal BS" to learn the ins and outs of the field, my friend.

But keep on reading.....

What has the FCC done as far as the
>restriction of external TV antennas? Can they be restricted by
>covenants? I know many beam antennas look like TV antennas.

Federal law protects installation of TV receiving antennas and
small satellite receiving antennas against any unreasonable
restrictions imposed by local ordinance, deed restriction, or
homeowner association rules.

HOWEVER, this is very specific for antennas used to receive
those signals, and does not offer any protection if the same
antenna or one that looks like it is used for any other
purpose, such as reception or transmission on amateur bands.
The FCC was very clear on that point in the Order establishing
that protection.

>I live in the worst place for any kind of "property modification" The Nazis

>work but won't. Any news on new regulations regarding Hams and covenants??
>Something really needs to be done about this.

The ARRL has tried for the last few years to get the FCC to
assert Federal preemption authority over private restrictions
or covenants against erection of ham antennas, and the FCC has
continued to refuse to do so until or unless The Congress
orders them to do so, as was the case with TV and satellite
antennas. There are Federal constitutional problems involved.

Several states have started to have "mirror" statutes passed
that assert STATE preemption of restrictive regulations against
ham antennas, and at least two states are in process of
including private restrictions and covenants in that preemption.
Private restrictions and covenants are creatures of state law
and the states can preempt them much more easily than can the
Federal Government.

If you need specific help in interpreting the local restrictions
(and fighting them if there are grounds to do so) it would be best
for you to contact a local ARRL Volunteer Counsel if you are an ARRL
member. Check the ARRL Web Site <www.arrl.org> for a list of those
in your area.

Cecil:

If you love the truth, then why are you investing so much time in this
lie you're foisting on us about US HF hams being "forced" to take Morse
code tests? The only ones who were "forced" are the ones who *feel*
that they are forced, and as you've said, what we *feel* about the
situation doesn't matter. This "force" is a very subjective thing; so far,
you're the only person I know (in this newsgroup) who is making a big
deal out of the force. Therefore, to this date, you have still failed to
explain the relevance of "force" with regard to code testing -- and have
been off-topic in this thread. Since we are required by circumstances
to remain on topic within threads, please comply with the subject of
this one and come up with a reasonable, rational explanation of this
"force" you're talking about. We're waiting.

Who said it was??? The point is that a bunch of my friends who once
were CBers are now Techs because HF did not meet their needs and
VHF did. And HF still doesn't meet their needs.

Everyone knows, eh? What a childish attempt at argumentum ad populum.
Why don't you mount an adult counter argument, Dick?

> To
> this day there has never been anyone who was ever forced to learn Morse
> code, for any reason (outside the military).

You say you agree with dictionary definitions. The dictionary definition
of "forced" is "required by circumstances". You are saying that US HF
hams are NOT required by circumstances to pass a Morse code exam. So
exactly where are all the US HF hams who used their free will to decide
not to pass a Morse code exam??? There aren't any, Dick, because you
are confused and absolutely wrong. ALL US HF hams were required by
circumstances (forced) to pass a Morse code exam. Any exceptions obtained
their privileges through fraud.

Yep, how we feel about it doesn't matter. In return for US HF amateur radio privileges, the US government forces all citizens who are granted those privileges to pass a Morse code test. That's what governments do, Larry. They enFORCE laws, rules, and regulations. How you feel about obeying those laws, rules, and regulations doesn't matter.

You have already admitted that your Morse code skill was produced with considerable effort. "Produced with effort" is your dictionary's definition of "forced". You have already admitted it, Larry.

"Forced" has a number of definitions. "Required by circumstances" is one of them. ALL US HF hams were required by circumstances to pass a Morse code exam.

I suspect you're slightly overstating the enforcement requirements. Since most of these cases would be minor (similar to "disturbing the peace"), lawyers familiar with the communications laws, such as yourself, are not going to be in that courtroom to argue such issues.

Why would a search warrent be needed? A cop does not need a search warrent now to enter a residence if it is obvious that a law is being violated (screams from the residence suggesting violence, loud stereo disturbing the peace, etc.).

A complaint about interference could be enough to suggest, at least when it comes to the local law, that a law is being violated.

>they mean. Sorry you disagree. Take your objections up with Random House.

Cecil:

Did you ever wonder why most words in the dictionary have more than
one definition? The reason is that a lot of words have more than one
definition, or "meaning." I own several dictionaries, and the smallest
of them, the Merriam-Webster Concise School and Office Dictionary,
assigns no fewer than six "meanings" to the verb form of the word
"force," i.e. "forced." Here they are:

force vb forced; forc-ing 1: COMPEL, COERCE 2: to cause through
necessity (forced to admit defeat) 3: to press, attain to, or effect against
resistance or inertia (~ your way through) 4: to raise or accelerate
to the utmost (~ the pace) 5: to produce with unnatural or unwilling effort
(forced laughter) 6: to hasten (as in growth) by artificial means

The fact that there are several meanings to some words is because
our language is a thing that is not at all carved in stone, as you would
suggest. The meanings of words change, evolve over time, and differ
in their context and application. You cannot hide behind an isolated
definition that appears to prove some point you have yet to make.

Please notice that the meaning of *forced* that you are trying to
attribute to Morse code testing requirements falls way down toward
the bottom of the list. Apparently, you are trying to express the idea
that US HF hams are being coerced to produce unnatural or unwilling
effort when they prepare for, and take, the required code tests. I,
and many others in this newsgroup, contend that this effort was taken
on willingly, with a mature understanding that doing so would result
in us attaining a practical and useful communications skill. You,
by quibbling over this "force," are whining in different key signature,
but it's still the same old no-coder song.

Ray:

Don't get me wrong -- I'm not a dyed-in-the-wool Kenwood fan!
In fact, I think that most of their HF stuff is sheer CRAPOLA! The
TS-830 was the only Kenwood HF rig that was half decent, and I
emphasize the "half!" On HF, I'm strictly an ICOM or Yaesu man;
my present HF rigs are both ICOM's: An IC-735 that has been used
daily since I bought it new in 1987, and an IC-730 which I bought
used a few years ago because it was in like-new condition (and still
is) and also because I had (and subsequently sold) another '730 before
I got the '735. I've used a Yaesu FT-840 and think it's a great rig --
I would buy one if I wasn't getting all of my HF needs fully
satisfied by my trusty ICOM's. The smaller, solid-state Kenwood
HF mobiles have not impressed me in the least. Most of the ones I've
had hands-on experience with were weird by comparison to the ICOM
rigs I knew and loved. In fact, some latter-day Kenwood VHF
rigs I've owned, particularly the dual-band TM-252, have been
completely unsatisfactory. In reality, my satisfaction with Kenwood
rigs extends exclusively to the TR-7950 (not it's predecessor, the
TR-7850 which was more crapola) and the TR-9130. I think they
were jobbed-out to another manufacturer and sold under the
Kenwood name…what else could explain it?

Cecil:

Woooah, Nellie! Where the heck did Dick say that a "superior
ham" is a "superior human?" Is a person who can play baseball
better than I can a "superior human" in comparison to me? Or
did he simply apply himself when he was (in your mind) "forced"
to practice his batting, pitching, and fielding skills in order to gain
a place on his school or professional team? Something's wrong
with you lately, Cecil -- I suggest you get your spoiled grape
juice tested for purity.

By the way, Phil, I thought of something after reading Bills message (and thinking about yours). Is there anything in HR-2346 that requires the local laws to use the same enforcement standards as the FCC? The bill does say that "a state or local government may enact a statute or ordinance that prohibits a violation of the following regulations," but it doesn't specify how those laws are to be written or enforced.

Therefore, what prevents these laws from being written differently than existing FCC procedures? For example, why couldn't the local law be written to handle these situations more like the existing disturbing the peace laws instead of an FCC enforcement effort? Under those laws, a cop can enter the residence without a warrant and issue a citation or make an arrest.

In our radio situation, why couldn't the law be written the same way - the cop can enter the home to stop the immediate violation (after all, the interference is disturbing the neighbor's peace) and issue a citation, or remove illegal equipment, as the situation dictates.

Mark Twain in his newspaper days wrote two major 'exagerations' that in later years he came to regret. One of these, a spoof on the local bureaucracy, involved the discovery of a petrified man and the convening of a coroner's jury to investigate his demise with proper posturing. If you read it closely, the petrified man was sitting cross-legged with both hands open, left-thumb to nose and the right thumb against the left hand. But, of course, no one ever read it that closely so he was getting requests for 'more information' for most of the rest of his life.

There isn't a lot of difference between playing with humor and playing with nitroglycerin

Dick

I'm not trying to pick a fight, Dwight, I just think that what you said conveys the wrong impression, even if it's not what you meant. In spite of the obvious exaggeration, you seemed to be making the point that no-code Techs are responsible for the occupation of amateur VHF frequencies, which isn't so. I'm not even sure that "more people" is right. Back in the late 70's and early 80's -- before no-code Techs -- the "CB boom" resulted in a *lot* of newcomers into ham radio, including (coded) Techs, and the amount of activity on VHF/UHF repeaters was huge. I wouldn't be surprised to learn that it was greater then than it is now, in fact.

That's a federal thing, right? Is it affected by recent supreme court rulings about not permitting citizens to sue the state government in federal court?

Why is a mountain a molehill only when it's your mountain?

Interesting discussion Phil!

The local governments, as you know involving Sonoma County, CA, have already found a way to de facto regulate radio transmission though the use of zone ordinances. The "set-up" is easy...they allow no antennas without a permit, and they issue no permits unless the "transmission facility" meets all FCC requirements (as well as conditions imposed by the ordinance) and has all necessary licenses and permits. They require that at all times such facilities conform to FCC rules, and if not, they can revoke the permit.

Thus a legally operated CB station (if any indeed exist in this country!) could meet the initial requirements and get a permit, but if it were found to be operating out of band or with illegal power, the permit could be revoked and the antenna ordered removed under normal abatement procedures. Such abatements are hard to overturn, as witnessed in the case involving an FM Broadcast station in...I believe Idaho. That case has gone on for some 10 years, twice to the state Supreme Court, and the station has lost at every venue. I think the tower has been removed.

The FCC has been asked on numerous occasions to overrule such over-reaching ordinances, but other than PRB-1 which only covers licensed Amateur Radio Service antennas, they have consistently failed to act.

As I said "if they wanna' play, they gotta' follow the rules
of the game". IOW, if they want to make the same charge that
the FCC would make, they must employ the same standards and
procedures that the FCC would use.

I'll argue that in any court - and if there's a hole in their
probable cause, so much the better.

The good burghers of Beloit didn't think of that before pushing
Sen. Finegold to introduce that legislation.

Not the same. The recent case was over whether Federal
private sector employment and handicap discrinmination laws
applied to states as employers. 1983 specifically deals with
the states (and locals) doing an action under color of
authority where they have no jurisdiction to do so.

Yeah, but..... I keep having this nagging reminder from long ago when I
sat through a few law classes, some principle of "abandonment" or some
such, when an authority consistantly and deliberately refuses or
declines to
enforce a statute or rule, something about a defense based on the fact
that the law/rule was vacated "in practice" and is thus null and

void.... Just how long can a rule stand as legal when untold numbers of gross violations are consistantly and flagrantly ignored by those whose responsibility is to enforce it, regardless of the reason? Isn't there a judge or appeals court up there somewhere who will say "Enough!"? I'm surprised that someone hasn't raised this before now.

It seems to me that lakes can have beaches but only oceans can have "Oceanfront Property"
Maybe that's what you have in Minnesota instead of beachfront property.

Aw comeon Brian, you kiljoy... None of this tech stuff ever craps out,
haven't you heard? And the local authorities have it all under complete
and total control, every time, all the time. Right.

Dick

883. Re: LAPD kicked off ham band.

Newsgroup: rec.radio.amateur.policy

Source record: 5231

What I have right now on 2405.000 MHz is cordless phones. I know that they're phones because right after the signal starts, I hear DTMF in clusters of either 7 or 11 tones, then talking (sometimes ringing first). These phones are using Wide-band-FM modulation, while my radios use narrow band (+/- 10kHz; +/-12.5kHz off the center frequency and my radio doesn't hear the signal). Their signals appear to be spread over 1.5 Mhz when they come up, and not always in the same place. Sometimes, I hear them on the proposed output frequency for my planned repeater of 2425.000 MHz too. Some days, this doesn't happen, while on other days, I've counted over 10 occurances. This could be from different phones. I don't have RDF equipment (and even if I did, it would probably not be on 13cm).

It has gotten to the point where I have considered writing my local FCC office for guidance, asking specifically what my legal obligations (if any) are in this situation: "IF a part 15 device is operating on a frequency that happens to be the input frequency of an automatically controlled station, does the control operator of that station have any responsibility in the retransmitted signal? Generally, in the amateur service, the control operator does, but under part 15 rules, the part 15 device operator has full responsibility not to cause any interference with other radio services. [Follow-up:] Is the mere presence of a signal that causes the automatic station to activate considered "interference" per part 15? [PS: Simply placing a PL/CTCSS tone as an activation requirement is not sufficient - there have been times where the phone's signal has broken the squelch. Apparently, the low tones are NOT filtered out of its audio.]

My system is sensitive enough (about +18dB just in the Drake 2880 downconverter) that it could be seeing a cordless phone from up to 5-7 miles away, let alone the increased sensitivity that it will have when in it's final configuration (pre-amp of another +13dB, plus using a base antenna of +15dB instead of the current mobile of only +7dBi, and mounting it on a tower, instead of BELOW roofline inside my house). Details at http://k6bde.home.att.net/repeater/.

Locally, I have talked with Fried Heyn, WA6WZO, who is in our local ARRL staff. Surprisingly enough, I did not seem to get any interference that I could identify as coming from LAPD. I'm about 23 miles west of Downtown, due north of the eastern edge of Santa Monica, up in the hills ("Brentwood").

Larry Roll K3LT wrote:
> You cannot hide behind an isolated
> definition that appears to prove some point you have yet to make.

Larry, you have it exactly backwards. It is precisely because there are multiple definitions of "forced" that I can choose the one I want and make a statement using that definition. I choose the valid definition I wanted and made that statement about three years ago. It is no less valid today than it was then.

> Please notice that the meaning of *forced* that you are trying to
> attribute to Morse code testing requirements falls way down toward
> the bottom of the list.

That doesn't matter. It's my statement so I get to choose the definition from the list of valid definitions. All you can do is ask what I mean by "forced" in that context at which time I quote the dictionary definition that I am using.

> You,
> by quibbling over this "force," are whining in different key signature,
> but it's still the same old no-coder song.

This discussion, in *concept*, has nothing to do with Morse code. I have very carefully made a very generalized conceptual statement: In return for privileges granted, citizens are required by circumstances (forced) to meet the requirements enFORCED by the government. That's what governments do. This applies to driver's licenses, pilot's licenses, home improvement permits, commercial wiring standards, commercial construction standards, amateur radio written exams, amateur radio Morse code exams, and thousands of other requirements, laws, rules, and regulations that are enFORCED by the government.

The concept applies to all privileges granted by the government in return for meeting the requirements. Morse code testing is absolutely not unique.

In order to be granted driving privileges for public roads, you and I were required by circumstances (forced) to pass a driver's test. Are you going to argue with me about that? Conceptually, it is the same as the Morse code test. The difference is that driving is not part of your religion.

Actually, he wasn't forced by the circumstances of government regulations,
but he may have been forced by other circumstances such as the desire to
operate and the inability to do same without equipment.

A man's gotta know his limitations. I am truly inferior, Larry,
it's no complex. I'm even inferior to a paramecium. Did you
know that a paramecium that is living today is virtually the
same paramecium that lived 1000 years ago. Parameciums are
essentially created by cloning so living parameciums today
have been virtually immortal for millions of years.

I just hit Shift-F12 on my text editor and the table appears.
Of course, it's a different table for each CodePage / CharSet.

Your Alt-181 may be different from my Alt-181. Here's mine: [ï¿½]
A vertical line with an equal sign in mid-point pointing left.
I use CodePage 862, CharSet ISO 8859-1 (Latin 1)

All it takes is one counter example to nullify that argument "no one", and
Richard has provided one.

Quoted from a Richard McCollum post in rec.radio.cb

"Pecking orders come in several flavors. I will make no bones here that I
do not consider a Codeless Tech to be a full-fledged member of the
fraternity and in fact I refused to administer them as a VE"

> What many are "bugged" about is the lowering of requirements,

>CODE is a four-letter word, Larrie...

By the way, Lennie...Saw a box full of "Ham Radio" magazines at a ham fest this weekend.

Notable was the September 1979 issue wherein one Leonard H Anderson had an article published.

Of course I KNOW it wasn't YOUR article, Lennie, since there was not a single profanity nor slur against Amatuer Radio or Amateur Radio operators in it......

As a matter of fact, I don't remember seeing the words "Amateur Radio" anywhere in the peice. How odd.........

Of course it was a (theoretically) enlightening piece, but then anything that doesn't require interaction with other human beings doesn't tend to offend anyone.

The OTHER notable point was that he was selling them for $.25 at opening, and was offering them free midway thru the fest. I imagine that was symptomatic of the rag's failure in the first place.

>range, selectivity and sensitivity.
>
I agree with respect to sensitivity and front end dynamic range (at
this particular point in history) but I don't agree that the
selectivity of the 390 is on a par with any number of even elderly
solid state ham xcvrs. When you start plugging cascaded INRAD filters
into the more serious ham xcvrs those xcvrs will hose 390 selectivity
big time. Crank in IF DSP tricks on top of the filters and the 390
selectivity comes up something I hope to hell I never have to deal
with again.

>SX-100 and SX-101 a few years later. Collins is an even better example.
>
Fuzzy discussion. My view is that issues like incremental improvements
in dynamic range are the result of ongoing device development efforts
tubes and solid state types alike rather than via your trickle down
from older radios concept. Either the devices are out there or they
ain't and that doesn't have much if anything to do with the cost of
the radio. It has a lot to do with the newer radios taking advantage
of the latest state of the art when they get put together.
>
So now 54 freakin' years after transistors were invented their
distant progeny have finally caught up with tube front-end
performance. You might note that it did not take even close to 54
years for tubes to get as good as they got.
>
I think we're at a sort of crossroads now, continuing solid state
device development work will no doubt result in the availablity of
devices which will have dynamic ranges far better than any of the
hollowstate devices can touch with a ten foot pole. When that factoid

becomes more obvious the boatanchor toob radio lovers are just gonna
have to adjust to being patted on their diehard heads as far as being
able to claim that the nitty-gritty strong signal handling performance
of their old radios is still state-of-the-art.

Believe it. I can toggle between agc fast slow but not fast/slow/off.
Can't imagine why but except for the FT-817 I haven't been able to
locate any store-bought xcvr out there in the under $1K class which
provides the "off" option.

>
The op doesn't have much to say about front end performance, it comes
with the radio. .
>
>How many of those tricks never get used because they are hard to
>access?
>
Huge variable. Depending on the radio and the op the answer can range
from all to very few of the tricks. In the case of the big desktop
radios with slews of tricks available very few ops use all the
tricks. So far I haven't run into a situation where I can't quickly
access the controls normally used for for real-time operating.
>
>In a typical SS contest, the game for most of us is to slowly tune
>through the band looking for new ones. Most of the tricks don't help with that.
>
I have the same level of operating convenience and contols access with

both my Kenwoods that I had with my Drake & Collins boatanchors. The
TS-50 is much easier to operate than a KWM-2A. Try cw with a KWM-2
sometime. Plus the 50 is a compact mobile rig. The 940 has 15
old-fashoioned rotary knob controls. How many do ya need to run in SS?
Plus they have new capabilities like automatically variable tuning
rates, passband shaping, auto-following notch filters, all nine MF/HF
bands, voice synthesizers, computer interfaces, direct keypad
frequency selection, they're a helluva lot more stable etc. No way I'd
ever consider doing any even half-serious contesting with boatanchors
again.
>
The solid state xcvrs have too much panel clutter for my taste but
much of it is for optional memory tricks and is simply ignorable.
Whoever it was who thought that being able to operate an HF xcvr like
a Bearcat scanner had his head guess-where. Epitomized by the TS-2000.
94 front panel controls. Plus menus. Wunnerful. There was a two-wek
old 2000 up for grabs on e-bay by a guy who just couldn't stand the
clutter.
>
I read an explanation for the clutter. The radios are designed
primarily for the Japanese market and Japanese tastes. The explanation
was that it's very difficult to install antennas in Japan because of
the lack of real estate. So Jap hams who cannot put up antennas go out
and buy these clutter-boxes to be able to just diddle buttons for
their jollies.
>
>One real problem with the new rigs is their short useful life and

>the S line were made over such a long time period and in such quantity that
>parts and documentation are everywhere. Not so with, say, the TS-930.
>
There was a multi-multi station in Ohio, forget the call, but they
just ran a bank of six 930s into six old Alpha amps of the same
vintage in the ARRL dx contest. All that gear is around 25 years old
and it still works fine.
>
When old radios finally die ya give 'em decent burials and move on.
>
>End result is that the manufacturers WANT us to become "consumers" of their

>it's just Marketing 101.
>
Nothing new about that game. Collins produced seven different ham
rcvrs between 1946 and sometime in the 70s, each one supposedly an
improvement over it's predesessor. The ricebox builders are giving us
a helluva lot more radios & choices than the tube boatanchor builders
ever did.

I wasn't trying to make that point either. When I made the comment about 25 people, I was mainly referring to HF operators (the discussion was about why HF users were so upset with the no-code Techs - the topic that every single person responding so far has ignored).

The point I was trying to make was that HF operators were not widely using the repeaters, so why should they be so upset after the no-codes came along and did start using them. Now, please, of course some HF users were using the repeaters prior to the no-code techs, but their emphasis has always been centered on the HF frequencies (not on the repeaters).

Yes it does. But on an individual basis, at least with me. What torques
my
tail is when one whines because he can't have it all on the strength of
his codefree tech written test, or yesterday's equivalent. It merely
indicated a lifelong whiner of the first magnitude, and I won't cut him
any substantial amound of slack. I have lots of tech friends who never
do that, or they would likely not be my friends.
But don't worry, not everyone is cut out to be a CW operator. Most who
aren't don't have a clue what they are missing and couldn't care less.

908. A QCWA special Announcement

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-19 07:43:43 UTC
From: QCWA@integrity-radio.org

They don't have to prove it. They simply hold a hearing and make a decision
to revoke the permit. It would be no different than the circus that it
takes to get a permit in the first place.

>
> >The FCC has been asked on numerous occasions to overrule such

Only for legally operating stations. It was never intended to protect
free-banders/intruders/pirates, etc. Local zoning can completly ignore
PRB-1 in such cases, and in fact, often ignores it even in the case of legal
ham operators. You are correct...CC&R's are not subject to PRB-1, and the
FCC seems to be making no effort to extend coverage over such private
contracts, even though they have the authority to do so, and most CC&R's
look like "contracts of adheasion" (or "they got you over a barrel" type
contracts) to me.

Perhaps some of the old time posters to this forum remember a rather nasty fellow, who used to post here, by the name of Michael Deignan from Rhode Island. Mike was a particularly nasty pro code test guy who proved what a fraud he was by faking a Hawaii address to get a KH6 call under the vanity program.

Well in addition to his fake Hawaii call he grabbed a bunch of club calls at the same time. Several of us told him the FCC would catch up with him and sure enough they did. Listen to this week's Rain Report. What goes around comes around Mike thanks to the FCC for the chuckle.

Why do you persist in equating VHF operating with repeaters? As I asked before, do you know that you can actually communicate on VHF/UHF without using active repeaters?

There are hundreds of people with WAS on 2m and quite a few with DXCC. All this is going on while Mabel is calling Clyde on the repeater and asking him to pick up a loaf of bread before he is destinated. (If your name is either Mabel or Clyde, nothing personal)

So I 'repeat', it is possible to have an interest in, and use both HF and VHF and not have any use for active repeaters.

Note that I say "active repeaters." One of the biggest thrills in my nearly 45 years of ham radio was when I pressed my key, released it and 2.5 seconds later heard my signal returning from the passive reflector that we call the Moon. Too bad the people that don't know the code can't participate in this mode.

Andt it's a good way to have an intelligent conversation; you can always talk to yourself and not once hear the word "destinated." <g>.

Over and out.

Cecil, Dick is not complaining about Techs as a group nor am I. We are reaping the results of fundamental dishonesty. I will give you two points to look up in your Funk & Wagnalls.

Point 1. The Tech is not and never was designed to be the entry-level license for HF amateur radio. It predates the codeless arguments so we can dispense with them. It was designed to serve a multiplicity of uses, all worthy but none of them in the mainstream of Amateur Radio. Some of them included:
a. Real honest experimenters - all 12 of them.
b. Wives wanting contact with the old man. The Bread-and-Milk thing which was the subject of a lot of dubious subterfuges of which I was once a major instigator. Every wife on our repeater was named Sally and had the same callsign, a 2x3 I once had for 2 months or so.
c. Personal communication of the type you describe with your camping buddies. The FCC whatever else one may think of them has a habit of encouraging communication. Good way to keep tabs on number one son when he is armed and dangerous on a hunting trip.
d. Taking some pressure out of CB. The spots were up then, too.

Without beating the point to death, selling the Tech as an entry-level ticket was and is fundamentally dishonest. In my VE days I did not administer them because I did not believe I was doing anyone a favor. As a practical matter I would not be called upon to anyway because of the necessity to keep the Advanced VEs occupied. In the context where Leland butted in, the discussion was advising the newbie. Guess what? I don't recommend taking Element 2 as an initial step either.

Point 2. This dishonesty, as lies have a habit of doing, has come back to haunt us -- certainly in the general environs of Newington CT. The Tech since it came into existence has been a dead end for a lot of amateur careers. When you get on phone, the time for code practice or working it

never comes again. Larry was in the trap, so was I. So if nothing else our level of tolerance is not as great as some but we know every self-deception in the book. As Billy Sunday once said of Satan, "I know there is a Devil because the Bible tells me so and because I have done business with the bastard personally". I won't lead a man there any more than I would lead him to an open door to unlit basement steps.

At least prior to 1991 the Tech, at least in theory, had to pass 5 wpm so he had some idea of what it was he was evading. Since then, we have developed Lifer Tech Syndrome, Dick's bugbear. Characteristics of this syndrome, a big campaign dedicated toward deceiving both the world and oneself, include:

a. Joining NCI and playing like the code requirement was even a debatable issue within a five-year horizon. Never miss the opportunity to say or write 'Morris Kode'. Note Leland's nearly-indecipherable tag line.

b. Joining everything, subscribing to everything, going to Dayton every year. Activity signifying not a hell of a lot.

c. Entering into every discussion on 'leading edge' technology. Nothing, of course, is ever done just talked about. Knowingly pronounce everything in existence as a 'legacy mode'. Become the resident genius on arcanity -- you too can be the guru of 160 meter gray line propagation.

d. Where anyone has actually achieved anything, even a simple-minded code test, he must be attacked, unhorsed, and mugged. Larry has built a whole new hobby on these dipsticks.

e. Whining endlessly about slights real or imagined. The object, of course, is to punish verbalization of what everyone in the vicinity already knows. In communities of the terminally incompetent the crushing line is "You think you are better than everyone else." When the response is, "I not only think it I know it" it is time for the riot squad. Equality is another word for nothing left to lose -- or more precisely never having gained it to begin with.

I do not play the game nor do I tolerate it.

Dick NBK

>ham operators.

And then the Berkeley City Council, that last bastion of anal
rententiveness, grants Stephen Dunifer and Radio Free Berkeley a
building permit and variance to put up their pirate FM antenna
mast several years ago even while their case was being litigated
in Federal Court....

Anything to screw the Feds....

>You are correct...CC&R's are not subject to PRB-1, and the
>FCC seems to be making no effort to extend coverage over such private
>contracts, even though they have the authority to do so,

They do not, absent a clear directive from The Congress, which
is what it took to get them to exercise preemption of CC&Rs
for TV and satellite receiving antennas. (I ought to write a
macro to one-key this statement...)

>and most CC&R's look like "contracts of adheasion" (or "they got
>you over a barrel" type contracts) to me.

I've been saying this for years.....

My "workhorse" text editor - which I use in conjunction with my
OS/2 mail reader (PMMail) and news reader (PMInews) - is The
Semware Editor (TSE) formerly known as Q-Edit. TSE is available
in DOS, OS/2 and Windows flavors, and demo/test drive versions
are available at <www.semware.com> It is a small but powerful
program and I recommend it highly.

My "real" wordprocessor is Word Perfect 6 for DOS (which
despite its name runs very well under OS/2 and Windows) and to
the best of my knowledge it does not have a character table
which relates to ASCII - it does have one which relates to its
own character numbering system.

I don't have the foggiest in how to do it in Notepad or MSWord
(or even if it is available) as I do not use them.

Sorry if I confused you.

In Windows Millennium (and earlier Windows versions) you can use a applet called Character Map. In Millennium it's listed under Start/Programs/Accessories/System Tools/Character Map. With this applet you can copy and paste the non-standard characters into Notepad or any other word processor. Also it will tell you the keystroke combination to use to get the character if you prefer to do it that way. Of course you must use a common standard font or the others on the newsgroup will not see the character you intend to send...

The flaw in CW operation using the TS-50 is that you have to open the case to adjust the sidetone level. That's tough to do when you're tooling down the highway... =:-0

Sonoma County in California (where Ron lives and owns a radio station) is the last bastion of regal supremacy of a building department which demands extraordinary and expensive things of applicants, private and commercial, and the people who hold the reins of entrenched political power stand back and watch the hoop-jumping with satisfaction.

>That's one reason we have lawyers...to work against
>such local zoning extremists.

I've "done business" there....fortunately my client had a lot of patience and a deep pocket to keep him going during the process.

Of course there is, Bill. Think about it. I've already mentioned the screams, or other sounds of conflict, situation. Add to that the right to enter while chasing a suspect. And add to that entrance into a residence to put an end to loud parties and so forth (disturbing the peace). In fact, as I understand it, a police officer can enter a residence without a warrant anytime there is evidence from outside the residence that a crime is occurring inside the residence (a fight in a residence that is visible from the street through a window might be one example of this).

Cecil:

Neither is ham radio or anything associated with it, including the
Morse code. And I was never "forced" to take ham radio tests
(theory or code), driver's licensing tests, college exams, or anything
else of that nature. I did it all on my own free will, and always had
the option of not doing so as long as I was willing to accept the
consequences of *not* doing so, that is, not gaining the privileges
granted by taking these many tests. Therefore, there was NEVER
any "force" applied, because the people in charge could have cared
less whether or not I took these tests. People only "force" us to do
things when they actually want us to do them against our free will.
An enemy could "force" a prisoner of war to confess to war crimes,
if enough "force" is applied to him. That's force. Nobody has ever
been threatened, tortured, or sanctioned in any way for not taking
ham radio tests or anything else of a similar nature. Your argument
about "force" therefore, is nothing more than meaningless twaddle.

Lennie:

Pseudocode? Binary Code? Hammaurabi's Code? The Code of Conduct? The Code of Military Justice? ASCII code? Yep, the word "code" has four letters, but it isn't a "four letter word" in the conventional sense, since it normally has no meaning which can be considered pernicious, salacious, or otherwise of a negative nature. Just to set the record straight.

Cecil:

If I said I was a superior ham to you because I passed a 20 WPM
code test, I may have been correct. If I said I was a superior person
to you for the same reason (and only that reason), then I was probably
shooting my fingertips off on my 10-year old Northgate Omni-Key
Plus™ Ultra keyboard, which is now 11 years old and still going
strong. I digress. A superior ham is not necessarily a superior
person. A very superior person could spend a lifetime without ever
holding an amateur radio license. As I know you've seen me say
numerous times, ham radio is not for everyone, and not everyone
should be a ham radio operator. I don't believe in touchy-feely
"inclusiveness" for it's own sake. This is why I have always supported
a multi-tiered license structure as an incentive for hams to progress,
including multi-level Morse code testing to ensure that a significant
number of hams will be exposed to and possibly embrace the regular
use of this most practical, effective, efficient, and universal mode of
electronic communication. Therefore, a superior person could be a
non-ham, and vice-versa. However, all kidding aside, if your inferiority
complex is truly as bad as your last few posts suggest, I am starting
to worry about you.

There are some advantages to "stealth" antennas. Like neighbors
not knowing you as a ham exist, and thus can't blame you for any
reception faults in their TV sets (even those that happen when you're
not home).

A dipole made of somewhat thin wire would probably not be
noticed. Arrange things so the coax feedline is at the body of
the house, at an attic or upstairs window.

I worked Antartica with 100W with a crude wire dipole in the
attic crawlspace of my apartment in Texas.

You'll need a transmatch of some sort most likely.

Maybe string a vertical antenna from the base to the top
of the only tree you mentioned you have.

Why would someone who does not know code not be able to participate in
this mode? The very first moonbounce station I saw, in Italy, was using SSB
voice. After that, I saw several other SSB moonbounce stations and
witnessed a number of SSB moonbounce voice contacts. Now, unless the
Italians are better at moonbounce then we are, I certainly see no reason why
SSB voice cannot be used with moonbounce here in the US.

936. Repeater Directory Note "z"

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-20 02:58:22 UTC
From: Radio Flyer <rlutz@cowtown.net>
Message-ID: <tbdi4eppv31772@corp.supernews.com>
Source record: 5184

The "z" in the notes column indicates "direct access to law enforcement services". So if I am driving and get a flat, or see an accident, or see a log or furniture in the road, would it be possible and appropriate to call it into the police using one of these repeaters with a "z" note (assuming my cell phone is not working)?

Even if you stayed with code for better s/n, you could use automatic encoder and
decoder to do it, no?

john

> equivalent. [snip]

What a bunch of bullcrap, Dick. I don't know of a single person that wants to "have it all on the strength of his codefree tech written test." Instead, what most of us (Techs) want is to be able to use the capabilities that the FCC has authorized, without constantly being harrassed for using those capabilities differently then you might use them (in other words, stop endlessly judging us).

In addition, like all human beings, we would not mind a little respect - not as a ham operator (I know we'll never get that from you, no matter what we do), but simply as a human being who wants to enjoy life without all the endless insults (the crap you wrote above or the "no-code equals no ham" nonsense, for examples).

And finally, some (not all - some don't mind the code tests and some have no desire to upgrade at all) want an opportunity to upgrade without spending weeks learning an absolutely antiquated communications mode that very few, if any, outside of ham radio uses anymore. By the way, describing code as an "antiquated communications mode" is not a judgement, a put-down of code users, or even an opinion - it is a fact.

Now, every single person that I've met who feels that way is more than willing to meet reasonable requirements (the written tests, for example), so it is not an situation of wanting something for free. Instead, they all seem to be saying they want a fair price for what is offered (and learning Morse Code is not a fair price simply because you once had to pay it).

> And I was never "forced" to take ham radio tests
> (theory or code), driver's licensing tests, college exams, or anything
> else of that nature.

So you don't have a driver's license, eh? Aren't driver's license
requirements enFORCED in your state??? If so, you were, along with
everyone else who has been awarded driving privileges, required by
circumstances (forced) to pass a driving test.

> Therefore, there was NEVER
> any "force" applied, because the people in charge could have cared
> less whether or not I took these tests.

There is force applied by definition, Larry. Enforced governmental
requirements satisfy the dictionary definition of force.

> People only "force" us to do
> things when they actually want us to do them against our free will.

That's only one definition of "force", Larry. There are many others.
You can use your free will to voluntarily submit to the force applied
by the government. How you feel about submitting to that force is
irrelevant. It is still governmental force. If you want to avoid
going to jail, you are, by definition, forced to obey the laws of
the land.

In return for privileges granted, the government forces its citizens
to meet the requirements for those privileges. That's a dictionary
definition of "forced". Therefore, citizens are, by definition, forced
to obtain a driver's license in order to obtain driving privileges.

Once a noted wealthy ham went on a safari to Africa and came
home with a monkey. He brought the monkey to a club meeting,
and cornered the ham class guru. "I'll give you a hundred
bucks to get my monkey ready to take the Tech test". The guru
demurred. "Five hundred bucks." More denial. "A thousand
bucks." Finally the guru said "OK, but it will take 18 months."
"Deal" said the ham with the monkey and departed.

"Hey, old buddy, what kind of a deal is that?" said the guru's
pal. "Look", the guru said "in 18 months anything can happen.
The ham can die. The monkey can die. And even if not, you
ought to see some of those folks that I have to prepare....."

Naw! It is because:
Italy is a long way from here.
The moon is a long way from here
If Italy and the moon are both a long way from here that must mean that
Italy is close to the moon.
That is why they can do it and we can't. :-)

My guess is that the decode portion would have a hard time. You need a
pretty good signal to get even crummy decode from what I have seen. A guy
that was showing me his shack tuned in a cw signal and although we could
```

hear it pretty well the decoder he had still threw in a bunch of garbage characters and dropped some letters. Since I haven't tried it I won't say it won't work but I have my doubts. Give it a shot!

Confining the discussion to 2m, which I believe is the focus of this thread...

Really? You saw a "number" of EME stations that routinely make SSB QSOs? I'm not saying SSB EME contacts do not occur, I have one myself; however, that was with W5UN who has an antenna that covers an acre of ground. Our Italian friends seem to have a propensity to operate at---ahem--shall we say slightly higher power outputs than most everyone else. Just ask their European neighbors, and this goes for all of the bands.

That is not to say that there aren't a good number of US EMEers using a pair of 8877s or something similar. I use one 8877 and have never run more than 1200W into the transmission line. I guarantee you that at this level, and with say four typical Yagis, you *will not* routinely work EME on SSB. Period.

The preponderance of EME QSOs is on CW. Furthermore, other "weak-signal" modes such as auroral and FAI distort signals so badly that CW is the *only* mode that is halfway intelligible.

If you are a code-illiterate person who wants to work 2m EME on SSB then be my guest. You will need a station with 10 to 15 dB or so advantage over CW to do it though. Maybe you think that is somehow "technically superior" to the "obsolete" CW mode, but I beg to differ.

Not likely. The trained-ear/brain (TEB) combination is a wonderful narrow-band tracking filter, character-recognition decoder that doesn't cost anything---well except for some small expended effort to learn a signaling technique that is simple enough many six-year-old children pick it up.

The TEB can easily decode signals with -10 dB SNR and many EME operators do -15 dB or more. In addition, a trained operator uses repetition to "build up" the information he is receiving. He does this despite Doppler shift, and several different fading modes that raise hell with machine read coding.

There are proposals for "more efficient" encoding schemes, but these all seem to require slower bit rates and lots of DSP and they just plod along at the same slow speed even when conditions improve. And for the uninitialed, there are "conditions" in EME propagation.

I don't foresee anyone winning the EME contest using one-minute long dashes, but what do I know. For now, I do know that the winners use huge antennas, lots of power and 20 WPM Morse code.

The guys that have 2m DXCC didn't do it on SSB or while watching a computer screen to see whether they worked a new one.

Sure it would be appropriate. Our club has one repeater set up
with "speed dial" to 10 area law enforcement agencies, including
FBI and BATF. We have never (in 23 years) had a known mis-use
of the facility.

Just playing with the idea, it occurs to me that you could use an automatic keyer, and be fairly sure by repeating the keying and hearing the response that it was your signal, even without being able to decode it. If you wanted to be really sure that no moonie was interjecting extra characters to insult you or make light of your efforts, you could tape record the return signal and slow it down. Come to think of it, you could transmit it at 1 wpm or less, and then use a printed list of the morse characters to interpret the return signal. There's always a way. :-)

Damn, I had another thought. You could use an automatic keyer, and repeatedly send a
signal, and have the repeated signal averaged in a memory, and probably do the eme with

less power than, say, limiting yourself to the wetware (TEB).

Roy Tucker is a self-described "renegade". His weekly net on the 435
repeater is called the "Renegade Roundup". He probably thinks it's
funny to have all those calls. It's a way of exploiting a federal
system that he is critical of.

I have no doubt about that Richard. Fortunately there are few like you out there. How I, or any no code Tech, chooses to follow their interests in Ham Radio is up to us. We don't have to meet your personal list of "approved activities" to be considered "real" Ham Radio operators. If that does not sit well with your vision of things, too bad, cry in your coffee, and move on.

License class advancement is not the sole goal in Ham Radio just as it is not in other areas of life either. Not everyone wants, or needs, to reach the Extra Class level the same way as not everyone needs to get a Ph.D. in their chosen field.

You strike me as the type of Ham who feels one is not worthy of being called a Ham UNLESS one follows in the foot steps you seem to feel is the only path to that title. You also seem to be unwilling to let others follow their own course, their own interests, and make their own choices in Ham Radio. Your vision of the path to being a "real Ham" is not the only one, nor is it necessarily even a good one. So you attempt to do what little you can to impede to process by refusing to help, instead you elected to hinder the process by shifting the burden to others. Seems a pathetic attitude where if you can't have it your way, you just wash you hands of the whole thing, such as being a VE, when it has anything to do with no code Techs.

As far as my tag line goes, if you can't understand it, try harder. I know plenty of other Hams, and non Hams too, who know exactly what I'm talking about. I will give you a hint however, it's a tongue-in-cheek joke about CW. If you can't figure it out after that, then your a lost cause.

When a paramecium cell divides, two identical adult paramecium
are the result. If you are so superior, let's see you do that.

When *most* of us decide to push the envelope testing the government's
will, we might as well kiss our way of life goodby.

I've got cells dividing all over the place, Cecil. A billion for their one. Besides, you haven't proven that that is a superior feat to my preferernce for procreating in the human fashion. Once you talk a paramecium into doing that I'll be impressed.

Jerry Fallwell would get real mad at you for saying that human life isn't the most important thing in the universe.

The XYL used to blame me for causing QRM to our own televisions. I took great pains to prevent this,
including the installation of a lowpass filter on the antenna input and highpass filters on the televisions, to
no avail. I spend a lot of time on the radio, so she pretty much resigned herself to living with 'those dang
noises'.

Then one night the QRM occured as we were both watching the tube - the rig was not even powered on.
Her words were, "Oh, I guess it wasn't you. This time."

You just can't win.

Poor Gerald. Can't read his own posts. Accuses others of misreading
them,
to wit:

> Mike was a particularly nasty pro code test guy...

Now go, again, and look up Mike's comments to the FCC re the
restructuring NPRM and get back to us. If dejanews hadn't crashed it
would be quite easy to retrieve a number of Mike's RRAP posts in which
he specifically stated his belief in dropping code testing. Sorry you
prefer to read with blinders in >on< mode.

It sure is remarkable how much self-damage you code haters have done to
yourselves over your years of "I don't wanna". And there seems to be
nothing you can do to heal yourselves...

I modified my TS-50 by installing an *external* sidetone level control. When working CW mobile, the background road noise is quite different at 75 mph than it is when operating in a parking lot. Also I sometimes use earbuds (for XYL harmony) and other times an external speaker. Sidetone level adjustment for me was a necessity...

Since the TS-50 comes with no sidetone adjustment, no internal keyer and no CW filter, I think you could say it's not really all that CW friendly. The only reason I have a TS-50 is that Ten Tec couldn't deliver a Scout for over a month, I had money to burn, and the TS-50 was the only other small HF rig available at the time (in 1994). That said, it's been a great rig. I installed the CW filter and have a Curtis K5 'lil bugger' keyer bolted to the side. The TS-50 is mounted on *top* of my dashboard. That makes it easy to operate without taking my eyes off the road. Unfortunately, this location also means that the rig gets very hot in the Arizona sun, especially when parked for a couple of hours. Also I have dropped it more than once, and have occasionally messed up by operating it full power into a bad load. This is one tough little rig...

It is too bad as I remember he was most nasty to people who expressed
the opinion that code testing should be eliminated. He may have flip
flopped later but this is how I remember him.

Since this cannot reasonably be established let's amend my description
to "particularly nasty" and leave out the code position.

>
> It sure is remarkable how much self-damage you code haters have done to
>yourselves over your years of "I don't wanna". And there seems to be
>nothing you can do to heal yourselves...

How on Earth do you read that I am a "code hater" this is stupid even
for you Dick. I said nothing about my position WRT code in my posting.
I filed no comment with the FCC WRT the change in code speed testing
and if you are smart enough you can even determine that I once passed

a high speed code test. To that end I assure you that I never asked for nor received any waiver on any Amateur examination in fact I never have I ever failed any examination that I attempted.

The reasons I didn't bother to file a comment WRT the code test question:

First of all I didn't really care what they did.

Second it was a done deal and there was nothing the ARRL or you code whiners nor anyone else could do about it. I could explain but you seem so comfortable in your bigotry I'll just let you be.

Apparently I did "wanna" cause I "dida". Now Mr. Big Shot tell me what you did to further ham radio in the past year aside from bitching and recklessly accusing people when you haven't a clue what you are talking about.

I can see the fake Hawaii address to get that particular vanity call
(I mean I can see the reason, but I can't say it was justified), but
what *IS* the point of getting multiple club call signs? To get one
you like? But the vanity system lets you do that.

Uh, Gerald. seems it was YOU who had no clue, and I merely
straightened you out.
Mikd Deignan's position WRT code testing was never in question, he made
that clear from the outset, all the while showing no sympathy for any of
the legions of whiners. Which, of course, and in complete accordance
with Dick McCullom's axioms, made it mandatory that he be attacked by
said whiners....

That IS threats of violence or bodily harm.

>Add to that the right to
>enter while chasing a suspect.

How does that even remotely cover an illegal station
operation?

>And add to that entrance into a residence to
>put an end to loud parties and so forth (disturbing the peace).

They can knock on the door, but they can't just bust
in without a warrant. If the occupant(s) don't quiet
down, then there may be some justification, but I'll
defer to Phil's understanding of such a situation if he
decides to comment.

> In fact, as
>I understand it, a police officer can enter a residence without a warrant
>anytime there is evidence from outside the residence that a crime is

Thatdoesn't cover an illegal (pirate) station operation
at all.

Cheers,
Bill K2UNK

985. CEPT changes to 5 wpm for Level 1

FYI from R. Tannehill

I see that on March 6, the CEPT changed it's HAREC
Level 1 requirements from 12 wpm to 5 wpm.
It is generally believed that all the remaining European
countries who have not done so, will likly implement 5 wpm for
full band/power access.

The dominos are falling ever faster.

Cheers,
Bill K2UNK

Greetings All,

The following letter was posted by Ed, W5HTW on the QRZ board. He very carefully noted and logged the pirates he cites, and makes some very poignant comments on what NOT to do to these idiots.

Unfortunately, I think the lack of enforcement ON 11 meters has allowed the idea that the FCC will not search out or prosecute them has lent the feeling of security to them.

But I agree that getting on top of these clowns will do little to stop them. Keep it clear, log the information and let the FCC do their best to clobber them.

73

Steve, K4YZ

'BEGIN QUOTE:

Since March 16, 2001 I have noticed a group of Freebanders has collected at the low end of 40 meters. They were first heard by me on March 17 at 0315Z (March 16, 8:15 PM) on 6998.7 KHZ. I listened for about an hour before they signed off, after indicating they might move to 80 meters. However, they chose to quit.

When signing, they did use amateur type call signs, but please, read on.

On Friday night they were back. This time they were at 7.000.33 and drifted badly between that freq and 7.001.65 LSB. One of them had a relatively clean signal, the other had a severely overdriven signal, so much so it was difficult to actually determine its center frequency and make it completely intelligible.

On Saturday night the frequency was also used by another Freebander who switch to more CB lingo and extreme profanity. I have not heard him since, and his signal was weak.

The problem with this is a few hams can not appear to resist the need to get on the frequency and order these guys to move, or to spend a bit of time deliberately interfering with them, or jamming them with CW. This may thwart DF efforts by authorities. In addition, it may render tapes being made of the transmissions unreadable at places, with the result they can not be used for evidence. And finally, and quite importantly, it makes you, if you do this, as illegal as they are, and you may indeed be cited for such.

The best help is to listen! Make a recording. Send times and frequencies to both fccham@fcc.gov (the FCC's amateur radio complaint section) and describe what you heard (do not send WAV files) and to N4QX@arrl.org

Brennan Price, N4QX Field and Regulatory Correspondent ARRL--The National Association for Amateur Radio 860 594-0272 (work)

Be prepared to mail via regular mail a cassette tape to both the FCC site (get the address from the site) and to Brennan at the ARRL.

Please do NOT contact the people whose call signs appear to be used. While some of the call signs do not appear in the database, and are apparently "made up", some do. It is also 99 percent certain the hams to whom these calls are registered are not Freebanding. By telling them about pirated use of their calls, you may trigger an action by them in retaliation they may get them into trouble. Also, on the tiny chance one of these people is using his own legit call, you tip him off that he is identified. Most likely the call signs, all of them, are bootlegged.

These people claim to also be using 80 meters, and my guess is they are at or just below the CW band edge. Remember -- if they are NOT in the ham bands, they are NOT our concern!!! We have NO authority over them outside the ham bands, (well we have no authority anyway!!) but there is nothing to prevent us from notifying the FCC concerning the activity. Kind of like seeing a drunk driver on another road, one you aren't using!

But if they are IN the ham bands, or are splattering into it, they are the ARRL's concern as well as the FCC's, and you should contact both.

Thanks

73 Ed, W5HTW"

> "obsolete" CW mode, but I beg to differ.

I think there is another point to be made here that is being missed. That is if a non-coded Ham tries to operate EME, for example, he/she will soon learn that CW is much better than SSB for that mode of operation. THAT is the motivation to learn CW, a desire to work in an area where it TRULY is needed. No arm twisting mandatory CW testing required! I think that is how it should be. When the need to use CW in a facet of the hobby, that interests a Ham presents itself, the desire to learn CW will arise on its' own. This is no different than in any other hobby where the desire to participate requires new skills to be learned.

So to sum it up, CW skills should arise out of a natural desire to participate in some areas of the hobby. That interest then becomes the motivation to learn what is necessary. I would like to see mandatory CW testing eliminated, but that in no way implies that all non coded Hams will never learn CW. Some will because they either need it for their area of interest, or they enjoy using it in general. I'm just surprised that some Hams seem to act that if CW testing was eliminated that the mode will just disappear, it's not going to happen, and I think it's that fear that drives some Hams to want to retain CW testing at any cost.

Aaron,

If I may, I'd just like to say a couple words about the TS50--all in agreement with you. It is, indeed, a tough little rig. I bought one in '94 as well. I have bought and sold at least a couple of them. I found both of them to be "punchy" little rigs with good audio on SSB. I only ran it on CW as a base, and, in that case, the sidetone was not as big an issue. All in all, I still like them, and would buy another if the need arose. I can surely see how the lack of sidetone controls could be a disadvantage while mobile. On the other hand, in Kenwood's defense, we should remember that this was the first foray into "mini" HF rigs. I can see how trying to cram so much into so little at a reasonable price was a challenge. When I first saw the TS50, I thought they gotta be jokin'. But, if I recall correctly, this little rig went to market with fewer bugs than even more recent mfrs' attempts, so even without certain features that would've been nice, the TS50 was/is a success. Like you said, it is one tough little radio.

Incidentally, I talked with the Kenwood rep at the Charlotte, NC hamfest a couple weeks ago and he said Kenwood is now working on the second generation of the TS50 which will include more accessable features, de-tachable face, and 6 meters to make it more competitive with other brands. If they keep the ruggedness and reliability of the original, it will be an awesome rig as well. I only wonder why they waited so long.

A detachable face would be a nice feature to have. One of the more dangerous things for HF mobile operation (CW or phone) is to have to drop your eyes from the road to tune or adjust the rig. Mounting my TS-50 on top of the dashboard solved that problem, but it is somewhat unsightly, and perhaps a bit unsafe were a collision to occur. No matter how small the rig is it would likely feel uncomfortable stuffed in your mouth... :-)

>>Add to that the right to enter while chasing a suspect.

The key is CHASING - hot pursuit of a violator for a crime committed outside the residence in the presence of the officers or when the crime observed from outside the residence indicates an immediate threat to safety of life. Other than that a LEO does not have the right of warrantless forcible entry even to apprehend a felony suspect who has standing to be in that residence. In plain language, the cops can "break into" a residence to apprehend a burglar or robber or anyone else that has no right to be in that place.

>>And add to that entrance into a residence to
>>put an end to loud parties and so forth (disturbing the peace).

Even when we had to enter an unoccupied building (or in one case cross the deck of an unoccupied boat tied up to a residence) in the course of interference-to-safety-communications investigations, we had to get a warrant from a Federal magistrate.

That is correct. The "enforceable" offense of unlicensed operation based on the use of overpower/out-of-band/uncertified equipment takes place WITHIN the residence and by itself does not pose a sufficient threat to safety of life to justify a warrantless break-in.

HUD, or "Heads-Up-Display" technology has been around almost three times longer than cellphones. Perhaps it's time to encourage the mfgr's to develop an HUD for mobile communications or cellphones?

You're much better off with the TS-50. I got mine used for $500. I
just put the cw filter in mine and it makes the difference between the
radio being a pretty decent cw rig and a very lame cw rig. I wouldn't
take a TS-50 into one of the major dx contests as a serious competitor
but I ran quite well with it in the Russion dx contest and it's gonna
be my Field Day cw rig. For Field Day purposes the TS-50 will perform
just as well as my maxed-out TS-940. Which is a pretty strong
statement. I used somebody's TS-440 or some such crapper at the 20 cw
seat in Field Day last year, terrible radio in comparison with the
TS-50.
>
I'm living at a temporary qth where space counts so I opted for the
TS-50 instead of the TS-940 moose. I don't believe the dx pileups I've
been busting with the thing considering that it's design intent is to
be an underdash ssb rig. I used it with it's ssb filter as the NCS in
the "rrapnet" getogether, sure worked tits in that role.

I did that a couple days ago. I'm using a 475 foot "random length" end
fed wire I tune with an MFJ box. I was working some Euros on 80 then
moved to 40 to listen on Monday nite. Heard a German calling CQ,
without thinking I simply hit the paddles & worked the guy. *After* I
worked him I realized that I'd forgotten to retune the antenna from 80
to 40. Brilliant maneuver. The swr on 40 was offscale. I hit the
paddles again, the FS meter needle didn't even get off the pin but the
power out indicator in the TS-50 showed a wee bit of power out. The
radio had sensed my stupidity and cranked it's power output down and
defended itself from me. The radio is fine. I was a lot more impressed
with that trick than I was with the unintentional qrp contact with the
DJ5.
>
>This is one tough little rig...

Part of this I can agree with, and part I must disagree with. Learning Morse code is actually a fair price to have to pay; not because I had to pay it or because anyone else had to pay it. It is a fair price to pay because that is what is required (at least for now). That may change in the near future. You can't go to Wal-Mart and say, "I think the price for this doohickey is too high, and that isn't fair. You need to give it me for less." When you go to Wal-Mart and see something you want, you either dig through the pocket lint to find enough money to get it, or you tell yourself it's too high a price and wait for them Rollback the price. Either that or you try to steal it and get nailed by the little old lady at the door. You can stand there and gripe at them for their outrageous asking price until your face turns four shades of blue and your head falls off. It doesn't matter. You don't get to set the price. They do. So, you just have to decide what you willing to pay. The very same principle holds true for amateur radio.
I'm not advocating one side over the other. Personally, I paid the asking price at the time. I started out as a no-code tech, but I sat down and studied the code and passed it, albeit at only 5wpm. I know there are those out there who say I am no more of a ham than they consider the no-code tech (it makes no difference that I was in the process of studying 13wpm when the current restructuring went into effect). I have a very dear friend who moved about 100 miles away making contact via 2m quite complicated I keep hounding him to upgrade, but he just won't do it. He plans to wait until they drop the code requirement completely, and that is his right. The price right now is too high. That's his decidsion. You have to make yours.

The above is just an opinion, and do you know what they say about opinions? They are like @ssholes. Everyone has one and they usually stink.

I got mine sent to me in .pdf format by the legal librarian at
my main client. It's ten pages of small type listing the
violation notices and monetary forfeitures that the Bureau
released during February 2001.

I searched the FCC web site and didn't find it there either. I
don't think that the newsgroups allow formatted attachments - I
know that I don't appreciate them!

Call the FCC Call Center <1-888-225-5322> and ask why it wasn't
posted and then ask them to mail it to you. If we all did that
for every document that they list in the Daily Digest but do
not post for downloading, they may get the message someday.

Not a good analogy. Wal-Mart is engaged in a relatively free market
with lots of competitors. If one doesn't like the price asked by
Wal-Mart, one can go to any number of competitors. If one doesn't
like the price asked by the FCC, what competitor can one go to?
Again, if one is to obtain amateur radio privileges, one is forced
to pay the price set by the FCC which holds a monopoly.

Heck, you were the one who brought up "threats of violence, or bodily harm," which also has nothing to do with illegal station operation. I was just giving other examples, were a cop can enter a residence, to add to your rather short list.

So what? If you want it, pay the price. If not, don't. There's no other
hobby I know of which provides so many rewards for such a small investment.

Obtain a business license, driver license, hunting license, fishing
license, etc. These are all "monopoly" controlled. If you want one, you pay
the price (and they are a lot costlier than that of a ham ticket).

I think you're centering too much on FCC procedures. Again, I doubt local laws, written in response to HR-2346, will require the same procedures as those used by the FCC. Instead, I strongly suspect this will be added to the "public nuisance" laws (disturbing the peace), and local cops will use existing procedures under those laws to also enforce those interference complaints.

Of course, we'll never know for sure until some community actually decides to take on CB enforcement and actually writes a law. And, if we disagree with that law, we'll have to wait until it is challenged in a higher court to see if it will stick. Until then, all of this is pure speculation.

With that in mind, I think I'll back out of this discussion for now. Take care.

That's true. I have software on my computer that is supposed to send and receive code, but to be honest I never got around to hooking up the computer and radio. I have the proper cables, so I guess I'll mess with it one day soon just to see how well it works.

I don't think any specific subject is the "focus of this thread" at this point. :-)

> Really? You saw a "number" of EME
> stations that routinely make SSB QSOs?

Yep. I passed this house with a ton of antennas on it each day on my way to the local military base (Vicenza, Italy). When I saw the guy out front one day, I stopped and asked if he was a ham (radio amatoire, or something like that). Of course, that prompted a visit to his "shack" and a two hour discussion about radios and American hams (which ended with a determined invitation to visit again).

During later visits, he gave me a demonstration of his moonbounce capability (my main interest since I had never seen this before) and he took me around to meet a couple of his friends in nearby towns with moonbounce setups (we went to a third friend's house but he wasn't home). Since I didn't see a code key anywhere, I can only assume they were also using voice (though I never actually saw his friends operate).

As for how well he was able to communicate, that I cannot answer - his English was terrible and my Italian was even worse (he used Italian on the radio), but he didn't seem to be having any great difficulty and the signals sounded fine to me (not great, but I suppose I could have easily followed along if I spoke Italian better).

I agree and disagree with parts of it also, JW. As for my specific case, CW has never interested me, nor has HF. In other words, I'm pretty happy with what I have. Perhaps one day I'll make the effort to learn code (if I can every get away from the long list of other things that seem to eat up all my free time). In the meantime, I don't waste much time worrying about it.

Check this out. The psycho is attempting to pretend he's a regular human being. Perhaps if you add one more crappy antenna to your "look-at-me-I-gots-me-a-raydeeo-I'm-a-big-boy-momma" list, people will stop crossing the street and hiding their children when they see you coming? And now, back to sheep groping, Roger. Utilize all of your four years of schooling and try to limit your spelling and grammar mistakes to less than five in your next psychotic episode.

About three years ago, BMW, or was it Mercedes? Anyway, a German car maker actually put a HUD in a few of their test cars and was not very impressed with the results (it seems their test drivers were distracted by it).

According to the article, it was sometimes difficult to read as distracting objects moved behind the display, causing the driver to strain to read the display (thereby taking concentration off the road itself). Several other problems were also listed, but I don't remember what they were at the moment (I only had a quick read of a magazine at a repair shop).

Anyway, as I remember it, the company decided to head back to the drawing board to see if they could design a less distracting version. And that was the last time I heard about a car maker actually trying it.

I wonder if any of the US car makers have tried it and what their results were.

Yep. Also, it's a damn shame the Department of Transportation holds a monopoly on traffic regulations in this country, 'cause I'd like to switch to one that'll allow me unlimited speed on highways, as well as the right to drive the wrong way in a one-way street while drunk like a skunk.

>Wal-Mart, one can go to any number of competitors.

Additionally, it is market forces that set the price that
Wal-Mart uses...it is not just an executive decision to
charge $Xand the hell with the consumer. If X is too
high, WalMart goes chapter 11.

>If one doesn't
>like the price asked by the FCC, what competitor can one go to?
>Again, if one is to obtain amateur radio privileges, one is forced

And the "price" set by the FCC is not based on any
competitive concerns.

As long as the "price" set by the FCC is rational you'll get no
argument from me. If the state you live in set a driver's license
price of $1000, would you just pay that or would you join the
voice of public discontent and demand rational fees.

Cheers,

I wasn't making a moral judgment, just an observation based on the
way things are. Wal-Mart was not a good analogy to the government.

> Obtain a business license, driver license, hunting license, fishing
> license, etc. These are all "monopoly" controlled. If you want one, you pay

Yep, that's exactly what I said. In return for certain privileges granted,
the government forces citizens to meet certain requirements. That's what
governments do.

Bill,

I do know that a city councilman in my city (Gastonia, NC) has this under advisement with the city attorney. Seems he has been plagued with a CB station in his neighborhood that has a "dirty"(?) kilowatt amp. He and his neighbors have been swamped by this guy for a number of years and have been unable to obtain relief. FCC was unresponsive. When he learned of this law, he immediately searched it on the internet and is now having the attorney do the research. I don't know if City Council will actually act on it, but from what I'm told, the councilman is going to push it HARD.

I found out about this from the clerk in a local store who lives in that area of town. Since he knows I am into radio, he filled me in on the details. The neighbors out there, from what he says, are very much in favor. As much as I sympathize with them, I can't very well tell him that I'm not exactly thrilled at seeing this come to pass! I think it is a BAD law that will cause trouble for innocent CBers, hams, or other legal radio stations. It *may* be that lawsuits will be filed against untrained LEOS and governments and, stung by these suits, they will bail out of the issue.

Jerry

You may have it confused with Polonium Pond or Francium Fields.
It's doubtful you mean Americium Acres.

The Gallium-Arsenide Alley is much higher, though.

Nope, we're doing our best to establish that in order to gain certain
privileges (amateur radio privileges, driving privileges, flying
privileges, etc.) a citizen is forced to meet the requirements
dictated by the government.

Interesting to note that we haven't heard that Beloit, WI,
the community that pressured Sen. Finegold to get the locals
jurisdiction, has passed such a law.

I really wanted to stay out this but ole weird Roger is in so many newsgroups and he is the type of guy that everyone would love (to put duct tape over his mouth). But I find myself wanting to show him what I was told about libel laws.

Libel is proven in a court of law when the words, spoken, uttered, written, and or published which caused the libeled to be embarrassed to the point of duress. Do you think Roger has reached that point?

Some one near Roger's city should try to find out if Roger, cross dressing as a person, and the gall of imitating as an Amateur Radio Operator, has a job. (I doubt it.)

Someone should find out if the EM99 in his signature is related to Emergency Management or the local police identifier number for one weird mental impaired first class nut.

Why. Because if someone could find this information out I am sure the employer would not keep him around and certainly not the Emergency Management Agency of "it's" county!

Times getting short Roger. Repent your wicked ways my son. The end is coming sooner then you think. (my son! If you were my son you would not be on the internet you would be sitting in the hospital recovering from having fallen into the computer monitor.)

get a scanner and sit outside 1600 with a rinky dink (highly technical term
i know) antenna andsee what you pick up ... More than likely it will be
digital (EDACS) and use DES (or 3DES now) for encryption.

last time I knew they were using 1.9m

But these people would argue that the "price" set by the FCC (the code testing requirement) is not rational - it is not rational to still maintain testing for morse code when all other radio services have long ago dropped a similar requirement, or when code has been virtually eliminated in all other radio communitions (commercial, military, governement, marine, and so forth).

The code test requirement once served a purpose - to provide a means of code education for those who might enter other radio services and to provide a pool of trained operators to serve as a backup for other radio services during emergencies. Those purposes no longer exist today - the other radio services don't need people educated in code and CW is a very poor backup for cellular telephones, satellites, and electronic mail.

Once a paramecium multiplies, it reciprocates by dividing.
Dividing (by the reciprocal) is exactly the same as multiplying.

>
>The dominos are falling ever faster.

Bill:

Don't look now, but someone just kicked one of the sawhorses out from under the 4 x 8 sheet of plywood the dominos were set up on; they are now scattered all over the basement floor. A maximum 5 WPM code test may as well be no code testing at all -- and this is the ultimate goal. "They" are already there. It will be amusing to see how certain people will go about supporting and defending the notion of keeping the worthless 5 WPM code test, but I am not likely to be one of them. And, BTW, I'm not likely to be supporting the notion of "preserving" amateur spectrum, especially commercially viable UHF+ spectrum, from re-allocation to commercial users, either. It could be that now is the time to see if hams can do without a few billions of dollars worth of the spectrum they're not using.

>keep hounding him to upgrade, but he just won't do it. He plans to wait
>until they drop the code requirement completely, and that is his right. The
>price right now is too high. That's his decidsion.

J:

First, your "friend" who is too lazy to learn code even at the dumbed-down rate of 5 WPM deserves to be relegated to 2 and 11 Meters, which, from a standpoint of communications content, are virtually synonymous these days.

Second, any person who gains full amateur privileges with a code test at a speed less than 12 WPM is highly unlikely to pursue the regular use of one of amateur radio's most practical, effective, efficient, and universal modes -- that is, Morse/CW. Therefore, he is less of a ham than one who can/does use CW. This is an incontrovertible fact. Ever since April 15, 2000, there will always be two distinct "classes" of radio amateurs -- real, full-fledged hams who know, practice, and regularly use Morse/CW, and the inferior, lesser, diminished, and inconsequential wanna-bes who don't. (Memo to Cecil: you may wish to save this to use it against me in the future, as an example of how mean-spirited I am to lesser hams!) Ham radio is now in the throes of extinction, and it is no coincidence that it is doing so at a rate which tracks the speed at which telecommunications authorities around the world are reducing/eliminating Morse code testing requirements.

In an age where people from all walks of life now have access to instant, global communications, we are eliminating the only real challenge that remained as an attraction to intelligent, enthusiastic, and intellectually flexible prospective hams -- the code testing requirements. They not only offered a learning challenge, but imparted the ability to communicate in an environment of relative austerity under which the digital modes don't do very well. Therefore, we are losing all the very bright, eager, enthusiastic young people that the NCTA's claim were being turned-off by the code testing requirements. The truth is -- the people that are being attracted to ham radio are mainly middle-aged, white, working-class men, who have always been jealous of the capabilities of radio amateurs but could never overcome the inertia of their lazy, self-absorbed, and intellectually inert lifestyles. Their only desire is to gain the personal gratification of pushing a button and talking to someone a long way away. They are not going to invent revolutionary, high-speed digital techniques. They don't even know how to type. They can't even read and successfully follow the instruction manual that comes with a 2-meter HT. They need an "Elmer"

to "guide" them into the "hobby" -- which, these days, means showing them which button to press, each and every time a button needs to be pressed.

You say you "paid the price" of your ham ticket by taking a 5 WPM code test. You still owe us 15 more WPM, my friend. And unless and until you pay up, you're not a "real" ham -- you're just what passes for one these days.

I don't remember Mike as "nasty" at all. He simply pointed out the
inconsistencies he found in anti-code-test arguments.

His postion wrt code testing never changed. He did not "flipflop" - he was for
5 wpm from the start, and that only because of the treaty.

You can read his comments on restructuring (and everyone else's) at the FCC
website

http://www,fcc,gov
>
>Since this cannot reasonably be established let's amend my description
>to "particularly nasty" and leave out the code position.

The comments he made to the FCC establish his position without a doubt.

Amateur radio covers a wide spectrum of methods and modes. Some people specialize in SSB, others AM, still others TV, low power, EME, and yes some CW.

Qualification for an amateur radio license covers that same spectrum. We are tested on the Rules and Regulations governing the service. We are tested on our understanding of proper and appropriate operating technique. We are tested on how a radio signal is generated and detected. We are also tested on modes of operation i.e. ssb, am sstv, atv, antenna design and operation. And. We are tested on our comprehension of digital modes of communication to include morse code. To say that we should not be tested on a segment of the service just because it is old, outmoded and not used for anything ignores the fact that code is part of our general knowledge and an important part of our heritage.
I, personally, have a tin ear with some hearing damage due to loud noise encountered during my working career. I passed the 5 wpm code test for Novice/Tech Plus Plus many years ago. As a novice I made a number of CW contacts poorly. I upgraded to Tech and remained such until last year when I was able to upgrade to Extra. No I am not a fully qualified Extra as defined by some but I did work to learn that which was required by the FCC to qualify for the license. I also learned more than that which is required. This is the price I paid for my chosen hobby. I have also used my knowledge so gained over the years as a communicator in Civil Defense, Civil Air Patrol, various places of employment for a total of atleast seven radio services. All of this because I took the time and effort to learn the code. I have not, to date, used my morse code knowledge for anything other than to take the test but I am glad that I do know it.

Let me say in closing that the comments of Dwight Stewart, while contrary to what I believe, are just a valid as mine and, who knows, may be right. I have noticed some comments in this thread that are mean spirited and meant to agitate not convey rational argument. So, by all means lets continue the dialogue but lets keep it civil.

Well, at least you passed the test, which adds a lot of validity to your opinion, pro or con CW. I personally find it hard to validate the opinions of those who condemn what they have never achieved.

In a trial, there is a thing called an expert witness. This person is allowed to enter their personal opinion on a subject as evidence because of their experience and expertise in the field of questioning. However, a common layman's personal opinion is disallowed due to lack of expertise on the subject.

Amen. It is obsolete, totally irrational, and part of the very definition
of an Amateur in the treaty and will be for the next five years or so.
Anything over 12 always was ridiculous.

Given that, what are you going to do about it? You could pass it, you
could simply shut up and wait, you could send out for a pastrami on white

with mayo, have sex, or expect rain. There are any number of wondrous things to be accomplished.

So for why are we treated to the self-serving observations on the obvious? Why not try to sell someone who matters? We are just a bunch of people who cared enough to DO it and know bullshit when we see it. I don't care if you pass it or not but please do not insult my intelligence.

Stealthy antenna are great an most owners associations don't mind them even when the association knows it's there.

The intent of most association rules on antenna's deal with the concern the antennas create an eye sore the impacts the value of the property. In other words, the restrictions address aesthetics and not RF radiation.

Normally you don't have to worry about TVI because most people have cable or DSS. It really takes a lot of power to interfere in those cases. You should have no problems If your system is grounded good and your RF cable is made well and in good shape.

In my case, I can see my neighbors TV from my radio. I've pumped 10 meter, 200 watts into my dipole in the attic and see no problems with his TV. The 10 meter band seems to always be the worst cause of TVI. My next door neighbor knows I'm a HAM and we worked together to prevent any problems from poping up. I figure if it doesn't interfere with his TV then it probably won't interfere with any one else.

Do a search and get yourself on the scan-DC mailing list. There are a number of people who listen regularly there and plenty of stuff is in the clear. Try around 165.xxx as SS stuff both in the clear and otherwise. Listen on ADW 118.4 & 119.3 and various ground freq if you are close enough. List server users report many other freqs.

That's true and I am one of those that believes the
price (code testing of any sort) is no longer rational.

All true, but you don't consider that none of the other modes
are tested on a separate pass/fail basis as code is today.
I have no problem with adding some test questions to the
overall test/knowledge syllabus on code as a mode. There
is,however, no longer need to test anyone's individual
code ability as a stand-alone skill test on sending/receiving.
That's no different than not testing on ability to type
using a keyboard for packet or RTTY.

You are an excellent example of why there is no longer any
need to mandate code skill testing. If and when you ever decide
to use code, you will be relearning much of the skill and ability.

The only "rights" involved are as follows:
1 - Everyone has a right to become a ham as long as they
meet FCC requirements.
2 - Everyone has a right to expect that the FCC requirments
are rational and justified.

For every mode you don't use, Larry, are you less of a ham? Maybe he uses three more modes than you do. You have already lost the war. You need to work on your delusions and get on with the rest of your life.

> In an age where people from all walks of life now have access to instant,

You didn't find it attractive, Larry. You admitted that you had to force yourself to learn it. Seems the reason you want to keep it is that you were forced (required by circumstances) to do it so you want everyone else to befall the same fate. You were born too late for that.

What's this "us" thing? You got a mouse in your pocket? Larry, anyone with a valid amateur radio license is a real ham. If you don't believe it, ask the experts on the subject, i.e. the FCC.

Yep, we know, Larry. If you can't have it your very own selfish way,
then you don't want anyone to have it. You're like the bratty little
kid who would rather break a toy than let another kid play with it.

The same can be said about pregnancy and child birth. If you can't get
pregnant, or give birth to a kid then I guess that person's views on
abortion are not valid either, right?

The argument that if you don't know CW you can't have a valid opinion about
it is crap. I'm sure you can't get pregnant, but I'll bet you still have a
valid opinion about abortion none the less, which is the same argument about
CW, but in a different context.

What a load of crap! You want me to believe that only a Ham who can pound
out CW is a "Real Ham"? Give me a break. There are code tested Hams who can
pound code at 30 to over 40 wpm, but can't tell which end of a hot soldering
iron not to grab. So a "Real Hams" only claim to fame is his code speed, but
they can't even solder the phone plug on to the end of the cable, which
connects their key the rig? And that is supposed to be better than the Ham
who homebrewed his complete station, but never uses CW. If I didn't think
you posted the above in a serious manner I would swear you were just
Trolling for grins and giggles.

Uh, Cecil, anyone who has a valid license is a HAM RADIO LICENSEE. Many
don't know which end of the radio the on-off switch is located on.
Can't really consider them as Real Hams, can we?

It's not an argument, Leland, it's a fact. It is only considered an
argument
by those of you who have some reason to ignore the facts.
Only by learning it, gaining skill in how to do it, and working
radiotelegraphy can you come to know the essential facts concerning it
as a working communications mode.
You codefree types would much rather not even consider it to be a
communications mode, and for darn sure you would never bring yourself to
acknowledge that it is truly the most simple, easily implemented mode of
radiocommunication, useful under the most wide range of daunting
circumstances when virtually all other modes in common use are in the
toilet, or not even available due to their heavy overhead amd
infrastructure requirements. Nothing else even comes close.

So don't try to convince us that you will ever be a "Real Ham" ï¿½ until
you, too, are at least minimally qualified as a CW operator. Till that
time you will be an Amateur Radio licensee.

Actually, the price the FCC sets is based on international treaty. Of course, that treaty will likely change in the next few years by dropping the code requirement, and the FCC will follow suit. Those that want HF priviledges will either pay the price and learn code or they can simply wait a few years until HF priviledges go on 'clearance'.

The deep-pocket commercial interests would hire two groups to
take care of that problem in short order:

1. A commercial comm engineering firm (such as my major
client) which currently uses the services of ex-FCC and
ex-"spook" folks to locate and resolve interference cases for
its public-safety and other land-mobile clients.

2. The Congress, which will direct:

a. the FCC enforcement folks to use info generated by
themselves or by Group 1 above for the resolution
"forthwith" of problems experienced by said deep-pocketeers

and

b. the Justice Department to make horrible examples of
anyone who is caught.

Believe it or not, catching "pirates" and jammers is usually
easier than resolving interference.

Bill;

A comment you made below seems to fit the solution to the problem. If the code test was made part of the scoring of the written test just like the various segments of the present written then those who want to do code can study the code and have a section of the test that they will pass and have other sections that they can slide on and still get their passing grade.

Common sense and basic survival instinct are completely different than
trying to impose your personal opinions to the general public on a subject
in which you have no first hand knowledge or experience.

A perfect example of this is the anti-gun crowd - the vast majority of them
have never even fired a gun, and yet they would have you believe that based
on their feelings and opinions, you should have to give up your guns.

I understand how a nuclear reactor works, but I would never be allowed to
testify in court as to the value of such a device to the general public.
This is because no matter how well intended, the fact remains that my
opinion on the subject is moot due to the fact that I do not possess the
expertise necessary to present a legally valid opinion.

Oh Roger you go to so much trouble to find peoples information. You are so
sad as I said before. But this has gone on way to much especially since you
went from having fun with me to my family and we just can not have that.
See you soon Roger. By the way you psycho freak, what have you done for your
country? Can you spell it. I will not see your reply because as I said this
has gone on way too long. Your plug will be pulled......soon.

So all the digital communications experts who don't possess actual
Morse code skill don't know the "essential facts" about Morse code?
If Shannon didn't possess Morse code skill, do you think he didn't
understand the theory? You think the FCC doesn't understand Morse
code? You're still beating that poor old dead horse. Hams who want
to use Morse code use it. Hams who don't want to use Morse code
don't use it. Every ham has a choice of his/her favorite mode(s).

Are you using the colloquial/slang "real ham" there, Dick? "Ham"
is in my dictionary. It says: "ham - 2. an operator of an amateur
radio station." So what's your official definition of a "real ham"?

The keyword here is "Hams". As used in your sentence, the implication is
that a person you classify as a "Ham" possesses the skills to use CW if
they choose to do so.

> Every ham has a choice of his/her >favorite mode(s).

Agreed, according to your definition of a "Ham". But what about those
persons who do not possess the skill to operate CW? They do not fit the
definition of a "Ham" as you use it here... because they cannot operate CW
if they wanted to because of lack of skills.

Which is basically what the whole discussion is about... There are some who
may have access to the bands, but since they do not possess the skills
necessary to operate CW, by definition they can't be included in the group
commonly referred to as Hams...

Just why the heck would anybody in his/her right mind pay the ARRL to be a
member? For what?
Who cares?
The ARRL is losing members day in and day out. They have to ask themselves,
"Why?"

The real reason for this loss of members is simple.
1. It costs too much and you get nothing back.
2. The magazine is too full of voting and political agendas.
3. Nobody really cares about the ARRL.
4. The ARRL really doesn't care about you.
5. The ARRL has an agenda that does not help Hams.

Well, Dick, I've already said what I'm going to do about it directly (since I have no interest in HF right now, I'm going to do nothing). However, in the context of what you said above, I don't like pastrami, so that's out. But I do expect to enjoy the radio capabilities I have, barbeque steaks on the grill, enjoy the coming summer, and hope the rain goes away so I can sit around on my boat and soak up some harmful UV rays. In addition, I intend to address this topic occassionally when it comes up in this newsgroup.

Sorry, I hit the send button before responding to this. Anyway, unless your name is Bill, I wasn't trying to "sell" you on anything. And, since you want to be so huffy about this, let me add that I was also one of those who cared enough to do it - when I was about thirteen in the Boy Scouts. Since then, I grew out of flashing messages with my Boy Scout flashlight and beeping messages to kids on the playground with my little decoder ring. Since then, I learned the best way to communicate is to talk, and I have used my knowledge about radio to improve my station enough to do that effectively without having to resort to an 18th century telegraph key. Perhaps you should learn more about radio so you can do the same. :-)

Cecil:

I don't believe that such an immature, uninformed, and specious
assessment of my thoughts reflects much credit on your own
point of view. Truly, the "selfishness" exists among hams like
yourself who feel justified to tie up potentially billions of dollars
of legitimate commerce just so a tiny minority of hobbyists can
play with radio toys. We can no longer justify that on the basis
of "technical progress." We, as hams, are no longer in a position
to be the prime developers of RF technology. Those of you who
claim that we are are kidding yourselves. Moreover, your inability
to read the handwriting on the wall exposes your own selfish
agenda. The one thing that is certain is that there will be change --
and I don't think you're going to like it. For people like me who
can see it coming, it will be much easier to adapt. As a ham, I
wouldn't want to be you in a few years.

>jamming that such a situation could lead too !!!
>But then that would be anarchy...

Martin:

However, the commercial interests are more financially able to deal with the "jamming" than *amateur* radio operators are! And, once they gain primary access to a frequency allocation, they are legally protected from said "jamming." Mr. Hollingsworth could well find himself enforcing hams that are using *former* amateur frequencies -- for the benefit of the commercial interests that gained access to them due to our inability to effectively utilize them. How ironic.

73 de Larry, K3LT

Addendum:

I just read Phil Kane's reply to this, and as usual, he said it much better than I could. If you were planning on doing any of this "jamming," you'd be well advised to reconsider.

>cellular telephones, satellites, and electronic mail.
>

Dwight:

These are the usual specious and self-serving arguments of the NCTA.
The reason for the code testing requirement is, and always has been,
simply to ensure that radio amateurs possessed the skill and ability
to effectively employ the Morse code in amateur communication. This
purpose has never limited or excluded development of any other mode.
There is no connection between the Morse testing requirement and any
technical or operational development within the realm of amateur
radio -- or any other radio service. The Morse testing requirement is
a means to an end -- not a limiting factor. It's purpose does exist today -
and is a current and valid as it ever has been. The requirement is being
dropped due to the overwhelming laziness, demotivation, and indifference
of the general public...and the desire of the ARRL and the equipment
manufacturers to "consumerize" the ARS to the greatest extent
possible while it still exists. As always, follow the money, and you
will learn the truth.

>For every mode you don't use, Larry, are you less of a ham?

Cecil:

Certainly not. For example, I don't use HF phone at the present time;
that hardly makes me less of a ham. In order to overcome the challenge
of my apartment-dwelling operating environment, I am required by
circumstances (not "forced" whatsoever) to employ much more skill,
patience, and ingenuity to my operating practices than hams who can
use full power and high-gain antennae. Keep in mind, I operate on three
HF modes: CW, RTTY, and PSK31.

>Maybe he
>uses three more modes than you do. You have already lost the war. You
>need to work on your delusions and get on with the rest of your life.

I seriously doubt it. I believe you'll find most amateurs are hard pressed
to employ two modes. I certainly tend, as most hams do, to spend the
majority of my time on the mode I like best: CW. However, this requires
a great deal more operating skill than merely speaking into a microphone;
therefore I, and all other primary CW users, have a legitimate claim to
superiority as hams. The approximate breakdown of my operating time
vs. mode would be CW: 80%, RTTY: 19%, PSK31: 1% (mainly due to lack
of very many new users to work).

>yourself to learn it. Seems the reason you want to keep it is that you
>were forced (required by circumstances) to do it so you want everyone
>else to befall the same fate. You were born too late for that.

Your statement that having all HF amateurs be "required" to learn
and be tested on Morse code is to "befall" my "fate" exposes your
true agenda vis-a-vis the "force" argument. You consider it to be

something onerous, depressing, and unfair. My youthful objections
to learning and being tested on CW were, by my own admission,
a result of an immature and uninformed outlook. Apparently, as I
have grown, you have not.

>> You say you "paid the price" of your ham ticket by taking a 5 WPM code

>> pay up, you're not a "real" ham -- you're just what passes for one these
>> days.
>
>What's this "us" thing? You got a mouse in your pocket?

Well, it obviously doesn't include you, Cecil, so don't sweat it.

Larry, anyone
>with a valid amateur radio license is a real ham.

Not exactly. Anyone with a valid amateur radio license is a real
amateur radio license holder...just like a "member in good standing"
in a radio club is one who paid his dues! It is a basic qualification,
not the whole enchilada. To be a "Real Ham" requires more than
the basic piece of paper. As I've said many times, this includes
(but certainly is not limited to) a knowledge of the Morse code at a
practical operational skill level.

If you don't believe
>it, ask the experts on the subject, i.e. the FCC.

The FCC are not experts at what makes a "Real Ham." They are
strictly concerned with the basic, minimum qualifications -- which is
a legitimate function of government to ensure that a valuable resource
(the RF spectrum) is being utilized legally and efficiently. They
cannot and should not be concerned with what comes afterward...the
knowledge, skill development, and operating skill that defines a "Real
Ham" in the classic sense. They are not concerned with that, since
it is not a function of government.

if they aren't there check other 10kc steps up and down the band. that station is heard also on 28085 (channel 19 up 1) and other channels on 10kc steps up to at least 28295. and while you are at it check out all the U.S. truckers on 28085 and the rest of the band... 28535 (channel 19 up 2) is another frequent hangout, though i have heard them as high as 28755 (channel 40 up 2).

and don't forget my reward fund for catching an intruder, see http://www.k1ttt.net/ for more info.

>Are you using the colloquial/slang "real ham" there, Dick? "Ham"
>is in my dictionary. It says: "ham - 2. an operator of an amateur
>radio station." So what's your official definition of a "real ham"?

Cecil:

The term "Real Ham" was coined by yours truly in the Fidonet Ham
Radio echo almost ten years ago. It means exactly what *I* want
it to mean. My definition of "Real Ham" is a person who fully
embraced the art and science of AMATEUR radio; who explores
ALL operating modes but recognizes the special nature of the Morse/
CW mode as the most uniquely practical, effective, efficient and
universal electronic communications mode, and embraces the
notion of a requirement for testing in Morse code to ensure practical
proficiency in this important mode. The Real Ham realizes that
amateur radio is now a stand-alone service, unaffected in basic
concept by the economic and technological realities of other radio
services, and must continue to provide a basic, simple, and robust
backup capability based on operator knowledge and skill. The
Real Ham knows that amateur radio is more than yakking into a
microphone, winning contests, and collecting wallpaper. Most
importantly, a Real Ham does not whine, complain, or make
specious, self-serving arguments against progressive, multi-level
Morse code testing requirements, whether or not he has taken
and passed them. A Real Ham does not have to possess anything
even remotely close to professional-grade technical skills -- but he
must be technically involved at the AMATEUR level and able to
hold his own when dealing with the technology common to the
Amateur Radio Service.

This is what a Real Ham should be. Do YOU qualify?

No one is getting huffy but I do have a certain difficulty calling a
manure pile a 'fertilizer storage facility'. New does not imply good, old
does not imply bad. All things in context.

The context here is a lot of breast beating self-justification for not
taking the code test. We can talk coulda, shoulda, hafta from now til
Independence Day but the cosmic interplay of choice and chance has made it
a requirement to do 5wpm in the easiest manner possible for at least the
next five years.

What you choose to do about it if anything is purely up to you. You don't have to justify it to me or anyone else. If it is a self-worth issue, it is YOUR self-worth issue. So stop with the justifications already. It is not about the mode, it is not about VHF-UHF vs HF, it is about a code test that is more of an inconvenience than a hurdle for most people. Obfuscation merely irritates.

It is particularly irritating when the audience is composed of people who, for whatever reason and by whatever method, passed a code test. There is a time and place to call golf a stupid game -- the gallery at the Masters is more than likely not that time or place. Preaching the Gospel on the road between Mecca and Medina is not the best context either. So why in hell are you doing it?

Except this is not a court scenario...nor is the FCC arena
when it asks for or otherwise accepts comments on rules.
One need only examine the use and role morse code now plays
in any communications service to see it is significantly
diminished in need. The value of code to an individual
on a personal enjoyment basis is not the rational the
FCC uses in determining value or need.

Additionally, as a counter-point to your court "expert-witness"
scenario, you must admit that in the end, it is the jury
of people that do not possess that expertise that
makes the decision.

By the way, it doesn't take that much effort to be deemed an expert witness in most cases. The opposition will use its crossexamination time to discredit any expert witness...but in the end it goes to the jury for the final choice.

Cheers,
Bill K2UNK

> they choose to do so.

That's not the implication at all. This ain't rocket science. Hams who want to use Morse code learn it and use it. Hams who don't want to use Morse code don't learn it or don't use it and forget it. Hams are hams whether they know and/or use Morse code or not. I know quite a few hams who learned Morse code and NEVER used it at all. They simply didn't like it.

There were many thousands of early Technicians who passed a General written exam and a 5wpm code test who never copied a single character of code after that. They were issued 1x3 calls starting with a 'W'. In those days, you couldn't tell a Tech from a General by knowing his call. Everyone with an amateur radio license was a ham.

According to the ARRL survey, a majority of hams use CW "rarely or never". Would you say a majority of hams are not "real hams"? I got news for you. "The Amateur's Code" doesn't mean Morse code. What is wrong with live and let live?

That has been Larry's mantra for years now. It is false
today because there is no absolute need to have any ham
possess the skill in the first place. Additionally, it is
absolutly clear that the FCC sees no reason to ensure
such knowledge beforehand for no-code techs who are
free to use code all they want on VHF without ever having
been first tested on that skill.

This
>purpose has never limited or excluded development of any other mode.

Nor has your claimed purpose ("to ensure") limited or excluded
use of morse by non-code techs.

>There is no connection between the Morse testing requirement and any
>technical or operational development within the realm of amateur
>radio -- or any other radio service.

Agree completely.

>The Morse testing requirement is
>a means to an end -- not a limiting factor.

That end being what?

> It's purpose does exist today -
>and is a current and valid as it ever has been.

That purpose being?

> The requirement is being
>dropped due to the overwhelming laziness, demotivation, and indifference
>of the general public...and the desire of the ARRL and the equipment
>manufacturers to "consumerize" the ARS to the greatest extent
>possible while it still exists. As always, follow the money, and you
>will learn the truth.

Yes Larry, the great conspiracy theory. Consider the following
analogy....

The requirement (to be able to use a manual shift transmission) was
dropped due to the overwhelming laziness, demotivation, and
indifference of the general public...and the desire of the AAA and the
automobile manufacturers to "consumerize" the driving public to the
greatest extent possible while it still exists. As always, follow the
money, and you will learn the truth.

Cheers,
Bill K2UNK

You're showing your age, Larry, actually the lack thereof. Two
of the specific reasons for hams to know Morse code in the past
was interference mitigation between radio services and to provide
a pool of trained CW operators (for the military).

> This
> purpose has never limited or excluded development of any other mode.

Read the purposes of the amateur radio service. No mention of Morse
code or any specific mode. Apparently, those purposes can be met
without knowing Morse code.

> The Morse testing requirement is
> a means to an end -- not a limiting factor. It's purpose does exist today -
> and is a current and valid as it ever has been.

CW is no longer required for interference mitigation as almost all of
the other services have dropped its use. A pool of trained CW operators
is no longer required by the military. The reasons for knowing Morse
are being buried in the sands of time. Personal choice is the only real
reason left besides an old treaty that will probably be changed. What is
wrong with live and let live?

I distinctly remember the term being applied in the early 50s to
Generals/Extras VS Conditionals/Techs/Novices. "Real Hams" took
their exams at an FCC office, not by mail. Sorry Larry, the term
"Real Ham" was coined long before there was a Fidonet.

I enjoyed learning Morse code in Cub Scouts before you were born and
long before I ever heard of amateur radio so your statement is simply
ridiculous nonsense. You are the one who objected to learning Morse
code, not I. I enjoyed the heck out of learning Morse code. I could
already do 5wpm before I ever heard about the Novice ham license.

> The FCC are not experts at what makes a "Real Ham." ... They are not

Oh, I agree that amateur radio has seen better days but I think
the present threat is mostly VHF/UHF. I think HF amateur radio
will outlive me.

The point is that I will be sad to see ham radio go down the
tubes and wish to postpone it as long as possible by increasing
the ham population. You seem to be wishing for its destruction
and indeed, seeking to hasten that destruction by advocating
obsolete requirements which will decrease the ham population.

Specifically, they can only make their determination by weighing the evidence presented during the trial. They are not allowed to consider any personal opinion or facts other than what has been admitted as evidence in determining guilt or innocence.

> By the way, it doesn't take that much effort to be deemed
> an expert witness in most cases.

True, you just have to show the court that you have the experience and expertise of the subject necessary to validate your opinions, and therefore allow them to be admitted as evidence.

> The opposition will use its crossexamination time to discredit any expert
> witness...

They will try... But this is how the game is played. Nevertheless, the court will recognize a person as an expert witness based on their qualifications. If they are qualified to testify as an expert witness, their opinions will be entered into the case as evidence. The jury will never be allowed to hear a layperson's opinions.

>but in the end it goes to the jury for the final choice.

Again, to be based solely upon the evidence presented during the trial, not their personal opinion or feelings on the subject.

How about 'a plague on both your houses??'

Any requirement screens out somebody. So a 25wpm entry level will indeed screen out some worthy 16-20 ops who have no place to practice. That it can be done by people from all walks of life, presumably including wandering bindlestiffs, is interesting and true but hardly a good reason to block entry. OK, it is somewhat reductio ad absurdum but entry-level at least does not need to carry requirements much beyond keeping the Tyro from being a danger to himself and a pain to others. Subsequent tickets should carry requirements and privileges somewhat in keeping with each other or some other national purpose, e.g. development of a pool of competent ops in something.

Increasing a ham population in and of itself a) is pointless, and b) may in fact have the opposite effect. Gresham's Law: Bad Money drives out Good applies to things other than coinage. When it is all said and done letting anyone with a personal problem and a microphone into the hobby will ultimately create a band of people with personal problems and mikes and precious little else. While the 'after me the deluge' theory can and has been overdone it is wise to remember that Louis XV was right.

I am quite honestly amazed at the reaction to the 5wpm thing now that it has been around for over a year since announcement. One expected and got a few tons of instant upgrades but that died after three months. But cutting the 13wpm to five seems to have aroused a major storm of apathy in codeless circles. The VEs are back to 'you shuffle and I'll deal'.

Just how far should one go to increase the ham population? Do we put licenses in Post Toasties boxes, Cecil?

Far enough to ensure that there are enough amateur radio
operators to perform the functions that justify the existence
of the ARS and its assigned radio spectrum. Eliminating
unnecessary requirements is a step in that direction. Would
you and your family rather die or accept emergency assistance
from a ham who doesn't know Morse code?

With your alleged intelligence one would think you could understand
terms like
"basic, very effective, most simple, easiest to implement under the most
austere conditions". All of which describe radiotelegraphy. But you
choose to ignore those descriptives in favor of your personal choices in
the ongoing effort to rid ham radio of CW.
We know, Cecil, all the other techies would dump you like a prince
turned into an ugly frog if you said what you actually know to be true.

I strongly disagree with the subjectline here...
Also, considering that itis someones opinion on the subject, I'll take it with
a grain of salt...

I might also want the original poster of this to realize that all hams
agree (by act of possession if the amateur license) to proper rules of
conduct as set forth in the Rules of the FCC (at least in the US,
its territories and possessions).

Here the ARRL report on the recent CEPT change.

****
The ARRL Letter
Vol. 20, No. 12
March 23, 2001
****

* Europe Adopts 5 WPM as Morse Code Standard: The Conference of Postal and Telecommunications Administrations--CEPT--has effectively lowered the Amateur Radio Morse code test speed to 5 WPM for all European countries. The CEPT Radio Regulatory Working Group (WGRR), meeting last month in The Hague, adopted a revision of Recommendation 61-02 to include the 5 WPM standard.

The European Radiocommunication Office published the revised version of T/R 61-02 this month. The revision, which establishes requirements for the issuance of a Harmonised Amateur Radio Examination Certificate (HAREC), reduces the Morse requirement from 12 WPM. "In revising what is known as the CEPT Recommendation T/R 61-02, it has in effect recommended to 44 European countries to adopt the 5 WPM standard," said Wireless Institute of Australia-Victoria President Jim Linton, VK3PC, who closely follows global developments in Amateur Radio Morse code trends. Additional information is available on Linton's Morse code watch site, http://www.wiavic.org.au/mcw .

More information on CEPT is on the ERO Web site, http://www.ero.dk .

If an expert witness testified the sky isn't blue, would they
be required to accept that as fact? The reality is that
the jury gets to make their own determination as to the

accuracy of whatever they hear is. They do not automatically
accept everything as fact.

I don't want to rid ham radio of CW, Dick. Each and every one of those
digital communications experts understands the usefulness and utility
of CW, whether they use the mode or not. I encourage all hams to learn
Morse code and try CW. It's fun for me and sometimes useful. What I
object to is the Morse code *requirement*, but you know that already.
You seem to think eliminating the Morse code requirement is the same
thing as ridding ham radio of CW. In that, you are simply delusional.

73 is not plural. 73's is the plural of 73. That's the way we
pluralize numbers in the English language. 73 is a number and
more often than not, has nothing to do with Best Regards.

Best Regards is plural but we can certainly have Lots of Best
Regards. We can even have Lots and Lots of Best Regards.

> > from a ham who doesn't know Morse code?
> nor much of anything else?

Cheap shot, Dick. Actually I think the day of Morse AS A TESTING
REQUIREMENT is over and its end will probably be positive for the mode as
it causes chaos in the wideband areas of the bands. Even having passed
the 20wpm I never saw any sense in anything beyond 12.

BUT

1. Will it in fact increase the number of ops when we finish re-arranging
the deck chairs? I am not certain things not worked for have value.
Might not some civilized people simply let the barbarians have it?
Cheapening the product killed Schlitz, the second-largest brewer in the
USA at one time. The inherent self-policing of which the ARS has taken
pride, without much justification of late, for many years even if it did
exist could not withstand an onslaught of echos and Roger beeps.

2. It is interesting to note the lack of interest in even a 5wpm standard
for hf. We get justifications out the wazoo for why it is not taken but
little actual upgrading. I don't give a big hoot whether he knows CW or
not but I would like to see some evidence OF commitment rather than prima
facie evidence FOR commitment.

writes:

>Oh, I agree that amateur radio has seen better days but I think
>the present threat is mostly VHF/UHF. I think HF amateur radio
>will outlive me.

Cecil:

I don't disagree with that -- but I believe that we hams share access
to far more spectrum than we could possibly employ with any kind
of effectiveness or efficiency in the region above 500 MHz. Therefore,
I'm not inclined to fight tooth and nail to preserve our allocations there
when they can be used much more productively and profitably by
commercial interests.

>The point is that I will be sad to see ham radio go down the
>tubes and wish to postpone it as long as possible by increasing
>the ham population.

And exactly how do you propose to do that? So far, the net effect of
Restructuring has been some "paperwork" upgrades to General class
of Techs who already had taken a 5 WPM code test sometime since
the discovery of electricity. The numbers of new hams is way down.
And the new Generals aren't even bothering to go all the way up to
Extra.

Do you really think that going from 5 to zero WPM for HF access is
going to change this scenario? Again, all we'll get is more free
upgrading due to grandfathering of all remaining Techs. How will
our numbers increase? What is going to drag all these brilliant
young techno-genius whiz-kids away from the Internet and put 'em
on HF 'phone with the retirees down in Florida giving their daily
Bowel, Bladder, and Surgical Procedure reports? C'mon, Cec...
answer the question!

>You seem to be wishing for its destruction
>and indeed, seeking to hasten that destruction by advocating
>obsolete requirements which will decrease the ham population.

I'm not wishing for a damn thing. I'm just telling you what should
happen and what's going to happen -- like I have been for over a
decade now -- with perfect accuracy!

>Perhaps you should learn more about radio so you can do the same. :-)

Dwight:

OK -- I hereby challenge you to "talk" to hams in 100 countries using
less than 5 watts output and simple wire dipoles -- any band, voice modes
only. I've already done this in CW -- let's see you do it with a microphone.
Or can't you "improve your station" enough to make it as effective and
efficient as mine?

Bill:

Don't look now, but CW has never been a primary mode on VHF.
Admittedly, CW is important to the more esoteric VHF operations
such as satellite and moonbounce, but these more technically-challenging
techniques are usually prosecuted by CW-proficient hams, also usually
Amateur Extra-class (pre-4/15/00), and not the 2-meter FM repeater
jockeys that form the main body of No-code Techs. Nice try, but no
cigar.

>>There is no connection between the Morse testing requirement and any
>>technical or operational development within the realm of amateur
>>radio -- or any other radio service.

>Agree completely.

If you agree, then why is this the primary argument of the NCTA's? By
your own admission, it is a strawman. Therefore, since the prime argument
of the NCTA is false, then so is their entire no-code campaign. You have
just declared the PCTA's the winner of the code/no-code debate. Thank
you very much!

>>The Morse testing requirement is

>money, and you will learn the truth.

Bill, my new 2001 Toyota Corolla LE has a 5-speed manual gearbox.
It gets over 42 MPG highway mileage, >30 MPG in city driving. It has
much better performance, lower emissions, and at least 15% better
fuel economy than the comparable automatic transmission model of
the same automobile. It is also simplicity itself to drive, because I have
accepted the challenge of mastering the technique of driving with a
manual transmission. There you go -- another one of your best
arguments with the heck shot out of it. This is getting too easy.

>without knowing Morse code.

I don't recall ever saying they did. The reason for code testing doesn't
have to be stated in the Basis and Purpose of the ARS in order to be
valid, except to assist you in making another strawman argument.

>> The Morse testing requirement is
>> a means to an end -- not a limiting factor. It's purpose does exist today

Again, only if you are grasping at straws in a feeble attempt to justify dropping the requirements.

>Personal choice is the only real
>reason left besides an old treaty that will probably be changed. What is
>wrong with live and let live?

"Live and let live" has never been the issue. Participation in the Amateur Radio Service is strictly voluntary, as is acceptance of the licensing requirements. By saying "Live and let live," you're really saying "Give it away for nothing to anyone who thinks they wannabe a ham." Sorry, but I don't subscribe to that kind of touchy-feely, politically-correct, liberal, Communist, Socialist, Welfare-State thinking. That's your schtick, Comrade Cecil.

>object to is the Morse code *requirement*, but you know that already.
>You seem to think eliminating the Morse code requirement is the same
>thing as ridding ham radio of CW. In that, you are simply delusional.

Cecil:

Wrong again. Dick is simply being logical. For most prospective hams
of the past, the code testing requirement at incentivized proficiency
levels was the only reason why they made an attempt to learn the Morse
code and gain useful proficiency at it. The current reduction of code
testing requirements is not attracting any significant numbers of new
licensees. It is only generating upgrades based on grandfathering,
and total elimination of the requirement will only do more of the same.
In the meantime, few, if any of the new or newly-upgraded hams are
appearing on the CW segments, seeking to increase their CW
proficiency. All they are doing is seeking to increase the efficiency of
their PTT buttons. Reducing the code requirements is not only
reducing the numbers of CW operators, it is reducing the total number
of hams, since there is no longer any meaningful challenge for
intelligent and motivated prospective hams to master. Welcome to
the future of ham radio. Can you say "reallocation?"

Why? You seem to be suggesting that morse code is a requirement just because it exists, with no further reason for it other than the fact that it does exist. To say that, you would have to ignore the history of ham radio, the history of morse code as a means of communications, and how those relate to the history of radio development as a whole.

> [snip] The requirement is being dropped
> due to the overwhelming laziness,
> demotivation, and indifference of the
> general public... [snip]

Nonsense. The requirement is being dropped because the technology, and capabilities of that technology, have changed. Code no longer offers that much of an edge over the other modes when it comes to reliable communications. It is as simple as that.

That is an absolutely ridiculous statement, Larry, unless of course,
it is tongue-in-cheek humor. First the hams bands were going to be
flooded with masses of unwashed CBers and freebanders but now
the number of hams are being reduced because the Morse code
requirement is being reduced???? All it means is that it appears
that reducing the Morse code requirement, by itself, is not enough
to save amateur radio.

If ham radio is going to be saved in the long term, something
is going to have to be done to make it more attractive. Ham radio
has competition that it didn't have 50 years ago. It simply may
not be able to compete in the modern world. It may be going the
way of the barnstormers.

Okay, using your own words, why are we treated to this self-serving observations on the obvious? I'm fairly certain all of us know the current state of affairs when it comes to the code test, so all that "coulda, shoulda, hafta," nonsense is just that.

> What you choose to do about it if

Again, and again using your own words, why are we treated to this self-serving observations on the obvious? Of course what I choose to do about it is up to me, and of course I don't have to justify it to you. Why state the obvious?

> It is particularly irritating when the

For the exact same reason that the person who passed the code test made the statements he did. And for the same reasons you made the statements you did. And both of those collection of statements were just as irritating when the audience is composed of people who, for whatever reason, have decided against the code test.

It is also something that you were NOT required to do. What is wrong with
live and let live? Why do you want to force all drivers to learn how to use
a manual transmission? If you don't want to do that, you analogy to Morse
code falls flat.

Larry, as white as I am now, you could light up a neighborhood by reflecting the rays of a flashlight off my skin. In other words, I'm already careful to not to overdue the situation. But I look a little silly living at the beach with absolutely no tan at all, so I'm ready for a little skin color this year. However, I'll try to take your words of wisdom into consideration when out in the sun - though I do tend to avoid thinking about you when I'm trying to enjoy myself in the great outdoors. ;-)

Only in your mind, Larry, only in your mind. The rational reasons
for keeping a Morse code exam have disappeared except for S25.5.
Isn't that what the FCC has said?

> The reason for code testing doesn't
> have to be stated in the Basis and Purpose of the ARS in order to be
> valid, except to assist you in making another strawman argument.

It proves that preservation of Morse code is NOT one of the purposes
of the amateur radio service. What is wrong with live and let live?
Why can't there be a free choice of modes in a hobby in a free country?

> Again, only if you are grasping at straws in a feeble attempt to justify
> dropping the requirements.

Earth to Larry!!! I'm doing nothing except *reporting* what direction
the FCC has taken. Did you even bother to read what they said?

> By saying "Live and let live," you're really saying "Give it
> away for nothing to anyone who thinks they wannabe a ham."

Absolutely wrong, Larry. "Live and let live" means allowing each
individual ham to decide what he wants to do within ham radio without
being forced to pass a stand-alone exam on your personal favorite mode.

Why would I want to do that, Larry. My basic transceiver outputs about a hundred watts, and my amplifier throws in about another 650 watts. And I have so many antennas, the dogs in the neighborhood have begun to confuse them with trees (don't ask). This summer, my goal is to cut the number of antennas, but I would never cut that number to a single dipole.

About the only thing around this house that is limited to 5 watts are the handhelds, and I certainly would not use those in an attempt to "talk" to a hundred countries.

Then you, Cecil and others that have any desire to not
see morse usage dwindle to non-use have your path
chartered for you. I find it amazing that there are still
many devotees of various "old technologies" (archery,
manual gearbox transmissions, musket rifles, etc.) that have
no problem recruiting others to their special interest,
but you (Larry) expect all morse to just go away because
you are unwilling to be a proactive proponent of morse
by new hams.

>proficiency.

That is your problem as a CW devotee. If CW usage
dies out, it is the fault of those that claim they love
it, rather than anyone else. The only thing that has

changed is that there is no longer a mandatory
recruiting (affirmative action) test that indirectly became
a source of new CW users by default.

>All they are doing is seeking to increase the efficiency of

No Larry, for exactly the same reasons as there is now
a manual gearbox available for your new Toyota, there will
be continued usage of CW in the future. There may be
fewer CW operators, but if CW has the virtues you claim,
then it will continue to have a following...no test requirement
being needed anymore than people need a manual gearbox
skill test to be users and lovers of manual shifting vs automatic.

Cheers,
Bill K2UNK

Bill:

I hate to have to do it to you again on consecutive days, but I'm about to shoot your argument out from under you again.

In order to locate a 5-speed Corolla to buy, I had to use the phone and Internet to search dealers all over the area. I ended up purchasing mine from a dealer in Baltimore, over 100 miles from where I live in Dover, Delaware. If 5-speed transmissions are so popular, why are they now only found on smaller, compact cars with 4-cylinder engines, and then only in very tiny quantities (< 5% of total sales)? I am guessing that in 10 years, manual gearboxes will be largely obsolete. And the reason? It is easier and less of a physical challenge to drive an automobile with an automatic transmission!

While I'm not suggesting that learning how to drive with a manual transmission should be a requirement for obtaining a driver's license, the fact is that the benefits and advantages of manual transmissions do not assure their continued usage in the future -- and the exact same is true for CW. People had access to the benefits and advantages of CW mainly because the code testing requirement caused there to be a significant number of hams who tried the mode, and stuck with it long enough to gain operating proficiency. Once that happened, they became avid supporters of the mode. I learned how to drive with an automatic transmission. My first car was a '65 Ford LTD with a 390 cu. in. V-8, 4-barrel carb, dual exhaust, and

automatic transmission. It could leave Camaros and Firebirds in the dust at a red light, and pass everything else except for the local Arco station, due to it getting 10 MPG on a good day. Due to the 1973 Arab Oil Embargo and the tripling of the price of a gallon of gas, my next car was a '72 Mitsubishi Colt, with a 4-banger and 4-on-the-floor. I wasn't crazy about it at the time, but I did enjoy getting some serious fuel economy which essentially allowed me to commute the same distances for the same money as I was spending on the LTD. Your argument doesn't hold a drop of water -- much less a gallon of gasoline!

>Ham radio needs to be made more attractive and less unattractive.

Sooo...dumbing down the licensing requirements makes ham radio
more attractive... ... ...how? More attractive to lazy, disinterested,
unenthusiastic and incurious folks seeking an alternative for the chaos
of CB, perhaps...or more likely, looking for fresh ground to create more
chaos. Reducing licensing requirements are only going to make ham
radio more attractive to the undesirables, Cecil. It cannot and will not
provide any impetus for increased participation. Ham Radio is now in
it's death throes -- and it's being killed by people like you who seek to
have full privileges given away as a bribe to increase participation.
All that has done is to cement the image of ham radio as something
less than desirable and as deserving of the same disrespect that has
been shown to CB.

If you put me in charge of amateur radio licensing policies, I'd have
us back to a 5-level licensing structure with 5, 13, and 20 WPM code
testing faster than you can say Riley Hollingsworth. And we would
see renewed interest and real growth in our numbers virtually overnight.
If the ARRL was really interested in making money and securing
their future, they would support this concept, and make a 180-degree
change in the direction of their policy. Your and your "Incentive
Licensing" whiner cronies need to be ignored. Your whining is the
most dangerous and damaging thing ham radio has ever experienced.

Larry, try taking a class in logic. Your conclusion makes
no sense. Indeed, that you state: "there is
no connection between the Morse testing requirement and any
technical or operational development within the realm of amateur
radio -- or any other radio service" is exactly why there is
no need for any morse skill testing at all.

>only found on smaller, compact cars with 4-cylinder engines, and then
>only in very tiny quantities (< 5% of total sales)?

Larry, where did I say they were "so popular." I placed
no criteria on the degree of popularity. The fact remains
that there is apparently sufficient interest and market for
Toyota (and others) to still offer and sell manual gearbox
vehicles. That you had to go 100 miles to find one doesn't
change that. Likewise, those people interested in archery
probably have to do a bit of looking to find what they want
since it isn't the typical "mall shop" purchase.

> I am guessing that
>in 10 years, manual gearboxes will be largely obsolete. And the
>reason? It is easier and less of a physical challenge to drive an
>automobile with an automatic transmission!

Then why are they still being sold...even after 50+ years
of availability of automatics?

>While I'm not suggesting that learning how to drive with a manual
>transmission should be a requirement for obtaining a driver's license,
>the fact is that the benefits and advantages of manual transmissions
>do not assure their continued usage in the future -- and the exact
>same is true for CW.

It is the buying public and marketability of the manual
gearbox that will either see it continue or go away
completely. Somehow, a Porsche with an automatic
just doesn't cut it in my book...nor will it for most
eople that buy Porsche's in the future. Ditto for many
other marques also.

>People had access to the benefits and
>advantages of CW mainly because the code testing requirement caused
>there to be a significant number of hams who tried the mode, and
>stuck with it long enough to gain operating proficiency. Once that
>happened, they became avid supporters of the mode.

Again, you are, therefore, saying there is NO validity to
your code claims that are sufficient to gain new users
without a mandatory test. Sorry you don't believe you
can sustain code recruiting without a mandatory test.

>I learned how
>to drive with an automatic transmission.

So did I.

>My first car was a '65
>Ford LTD with a 390 cu. in. V-8, 4-barrel carb, dual exhaust, and

I've been saying it since 1981, Larry. That's when I noticed that
I was spending more time on computers and less time on ham radio.

For what Dwight wants to do, SSB is obviously more *effective* than
CW. 5w CW QSOs with foreign hams is not effective at all if what
one wants to do is ragchew with domestic friends on SSB. What is
wrong with live and let live?

Larry, exactly where is it written that the purpose of the Amateur
Radio Service is the preservation of Morse code? If Morse code
doesn't make it on its own merits without a governmental affirmative
action welfare program, it didn't deserve to make it. However, I
think CW will be around as long as the ARS.

How do you get "dumbing down" out of "more attractive and less
unattractive"? Oh yeah, that's just another straw man.

Dwight, I don't know if you and I had this conversation before or it was someone else, but for what it is worth, when I joined the Navy (to see the wonderful world of Vietnam), the code requirement for radiomen (I got out of it for only 4 years active duty, ET and CT required 6) had recently been reduced. I had spoken with another verteran from another service who informed me that the other branch had eliminated it by the early 70s. No one want to understand this isn't a 'gotta be' versa 'NO' code. It has been replaced (but not for enjoyment). I used to be pretty good (still not bad). When I turned in what was nearly a full page of perfect copy at 40 WPM, I was dismissed from class. There was a fellow on Guam who could copy 60. Neither one of us was going to compete with a 100 WPM teletype (which was THEN technology). CW has a few nice things about it - variable length encoding, which helps keep transmission rates higher. Did someone say PSK-31? Ooops! I am, however, contemplating a new use for CW. I am getting aggrivated by the control panels at work. They put fewer and fewer buttons and switches on 'em, instead adding (ready for this?) 'ALTERNATE' buttons, to be used in various combinations with other buttons! We even have a ctrl-alt-del function! And, we aren't even running windows (this is on PLCs). Just for chuckles and grins (I know I can achieve under a 5 ms scan rate), I think I'm gonna find an old STRAIGHT KEY and use it for everything. I might just wait 13 more months so I will be fully covered for retirement because I don't know how much of a sense of humor some of the guys have at work!

That is not a "perfect example" unless the end result of removing the code
requirement is that you can no longer use CW. If, after removal of the code
requirement, you or anyone else that wishes to learn and use CW is free to
do so there is NO parallel.

Again, unless the end result is that it becomes illegal to use CW the
comparison is invalid.

W6RCecilA <Cecil.A.Moore@IEEE.org> always writes:
> What is wrong with live and let live?

That depends on what you intend to imply by asking the question. If you're asking: what's wrong with letting anybody and everybody do whatever they please, there are any number of things wrong with it. If you're asking: what's wrong with letting people operate any legal mode they want to, then the answer is nothing. "Live and let live" is not precluded by Part 97.

Sure it is. The outcome of the argument is not the issue. The issue is that
you have a group of people with absolutely no expertise on the subject
forming an opinion based on personal feelings and self interest, that they
are trying to convince others is correct.

Ahhhh, but live and let live is precluded by the Morse code
requirement. An HF ham is not allowed to use any mode until
he/she has first used Morse code to pass the exam.

> Sure it is. The outcome of the argument is not the issue. The issue is that you have a group of people with absolutely no expertise on the subject forming an opinion based on personal feelings and self interest, that they are trying to convince others is correct.

The people who oppose the Morse code exam statute 47 CFR 97.503(a) are not required by law to be proficient in manual Morse code reception in order to petition their government to delete the rule. The Amateur Radio community have ignore the facts and laws for too long. Your delusion that only Morse code experts can decide this matter is pure non-sense.

In its 1999 License Restructuring Decision , the FCC acknowledge the effect technological changes on the need for Morse code proficiency:
"the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems."

In a October 27, 1997 briefing paper prepared for digital television broadcasters, Mr. Erwin G. Krasnow noted the effects of technology on regulation: "The Supreme Court has observed in CBS v. DNC that the FCC must "walk a 'tightrope' to preserve the First Amendment values written into the Radio Act and its successor, the Communications Act." After referring to its Red Lion decision, the Court noted that "[t]he problems of regulation are rendered more difficult because the broadcast industry is dynamic in terms of technological change; solutions adequate a decade ago are not necessarily so now, and those acceptable today may well be outmoded 10 years hence." Columbia Broadcasting Systems, Inc. v. Democratic National Committee, 412 U.S. 94, 117 (1973)."

Because of technological and operational changes, the manual Morse code exam is unnecessary. Its use as a licensure examination element to authorize frequency bands and emission types, other than manual Morse code operation, is arbitrary and capricious. The exam is even arbitrary to authorization Morse code operation, since such operations can be conducted by computer control.

The ITU rule S25.5 forces the FCC to impose a requirement upon its citizens that is unlawful. 5 U.S.C. 706, "Scope of review" provides:

To the extent necessary to decision and when presented, the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of an agency action. The reviewing court shall - (1) compel agency action unlawfully withheld or unreasonably delayed; and (2) hold unlawful and set aside agency action, findings, and conclusions found to be - (A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (B) contrary to constitutional right, power, privilege, or immunity; (C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right;
(D) without observance of procedure required by law; (E) unsupported by substantial evidence in a case subject to sections 556 and 557 of this title or otherwise reviewed on the record of an agency hearing provided by statute; or (F) unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations, the court shall review the whole record or those parts of it cited by a party, and due account shall be taken of the rule of prejudicial error.

The FCC has dealt with the Morse exam matter more directly. The telegraphic examination was removed as a requirement to qualify for Technician Class operator license in 1990. In its Report and Order (FCC Record 7631), the FCC stated:

(a) "For the amateur service to achieve its purpose it must have the participation of as many qualified persons as possible who desire to pursue that purpose. Modern commercial and military electronic systems require engineers to design them, technicians to install and maintain them, and a technologically literate citizenry that can use them. The amateur service should, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves where the United States needs expertise. We do not foresee that telegraphers will be in as great demand by future systems as will electronics and communications experts."

(b) "Telegraphy skill has been required for each person who has ever been issued an amateur operator license in the United States, including the current 493,000 licensees. Mastering the Morse Code was an arduous task for many of these licensees, and by developing their telegraphy skills they expressed their intense desire to become amateur operators. It is understandable, therefore, that there are licensees who are reluctant to share the amateur service frequencies with new licensees who have not made a similar effort to master the Morse code. We conclude, however, that telegraphy skill is not so essential to proper operation of a station that transmits exclusively above 30 MHz such as to justify turning away otherwise qualified persons who do not possess the skill. The Notice, furthermore, did not propose to delete the telegraphy skill requirement for a licensee to be the control operator of a station transmitting below 30 MHz where telegraphy communications take place extensively and worldwide communications are possible. The sharing of frequencies between codeless class licensees and other licensees can take place on frequency bands above 30 MHz where telegraphy operation is minimal and where the transmission of

the more modern emission types such as data, image, phone, pulse, RTTY, and spread spectrum, predominate."

(c) "We do not concur with the comments alleging that the passing of a telegraphy examination is an indication of the examinee's good character, high intelligence, cooperative demeanor, or willingness to comply with our rules. These traits are also found in individuals who have not passed a telegraphy examination rather than being exclusive to those who have passed such a test. For regulatory purposes, passing a telegraphy examination is no more and no less than proof of the examinee's ability to send and receive texts in Morse code at some specified rate. With respect to comments that make claims for the superiority of telegraphy over other types of communications, we do not consider these arguments as germane to this proceeding. The Notice did not propose to discontinue the authorization of telegraphy CW emission types on any amateur service frequency. The amateur service in the future, as it has in the past, can provide to those who personally desire to do so the opportunity to communicate by telegraphy."

The 13 and 20 word per minute telegraphy examination was removed as a requirement in 1999. The FCC stated in its Report and Order (FCC 99-142) for WT Docket #98-143 that:

(a) "the public interest will best be served by reducing the telegraphy examination requirement to the minimum requirement that we have found that meets the Radio Regulations" ;

(b) "an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art" ;

(c) "such a license qualification rule [Morse code exam] is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose" ;

(d) "the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise" ; and

(f) "telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications" .

The Morse code requirement is finished. Give it up before you destroy the entire Amateur Radio Service.

Not only that-- I'd far rather give up much of UHF/SHF to commercials
for their use for "intentional radiators" than to see them stuff our HF
bands with part 15 devices which are a far greater threat to the meat of
ham radio over the long haul.

Cecil prefers to ignore the certain fact that knowledge and skill in
the most simple, easily implmented, widespread and truly basic
radiocommunications mode could and easily *should* be mandatory for ham
radio operators, as a basic reqirement. Failure to assure this by the
FCC constitutes the beginnings of abandonment of oversight in a probable
prelude to similar eventual abandonment of the Service as no longer of
value in the "public interest, convenience and necessity". The
enforcement headachescaused by further anarchy caused by the influx of
licensees who, having invested no meaningful personal time, resources
nor effort, have no vested interest in adhering to the rules will only
hasten that conclusion.

So go ahead and take that to its logical extension- demand nothing from anyone, just let them do whatever they wish with no requirements whatever. I guess that's the Libertarian way.

Quite rational given that radiotelegraphy is the most easily
implemented, universal and truly basic method of radiocommunication.
Surely all hams should be requred to know the basics.

Project the dozen who post here into the general ham population and
you get tens of thousands.

So now you're criticizing hams with amps and antenna farms? (many
of whom run CW) The other night during our CW QSO, someone turned
on his amp so I could hear him.

Agreed, however Morse code skill should not be considered as important
as everything else in ham radio combined. But a 5wpm Morse code
exam is given equal (50/50) weight to a written exam on all other
ham radio topics including rules, regulations, safety, and theory.
Fold the Morse code exam into the written exam and that problem
goes away.

That's your illogical extension, as usual. Test only the things that
are important enough to need testing for an entrance exam.

Dick, the FCC disagrees with you. Bitching, whining, and moaning will
not bring back the past. When are you going to accept the reality
of the 21st century? It is up to individual hams to promote the use
of CW.

Neither does the FCC, Dick. And I'll bet you $1000 that Morse code
is not universal. Please prove that one other place in the universe
(besides earth) uses Morse code. Even on earth, probably less than
one tenth of one percent of the population knows Morse code.
Universal indeed.

Talking is basic to Homo Sapiens, Morse code is not. I can build an
AM transceiver faster than someone can learn Morse code and build
a CW transceiver. The spread of CW is getting more narrow all the
time. 2/3 of US hams use it rarely or never.

CW is a fun mode for some but it is just another mode and should be
optional like any other mode. What is wrong with live and let live?

Kind of a silly example, wouldn't you say? A vast majority has never fired a thermonuclear device either, and yet they would have you believe that based on their feelings and opinions, you should have to give up your personal thermonuclear device, if you had one.

Or taken even further, take the anti-drug crowd - the vast majority of them have never even shot heroin, and yet they would have you believe that based on their feelings and opinions, you should have to give up your needle.

> Just why the heck would anybody in his/her right mind pay the ARRL to be a
> member? For what?

Because it is the only national ham radio association in the US, and as such is the sole protector of every US ham's interests, rights and privileges. Because without it, ham radio would cease to exist after losing every Hz of spectrum to special interest groups who, unlike you and your CB buddy, are well organized and represented.

> Who cares?

Whoever cares about the future of ham radio, not only in the US, but in the entire world.

> The ARRL is losing members day in and day out. They have to ask themselves,
> "Why?"

Provide data to support this claim, please.

> The real reason for this loss of members is simple.

Bullshit. See above. What's the cost nowadays, $34? You mean to tell me that you "can't afford" lousy $34 to be a part of the organization that protects *your* interests? You probably blow more than that daily on beer.

> 2. The magazine is too full of voting and political agendas.

Bullshit. Nobody forces you to read those pages, nor the rest of the magazine for that matter.

> 3. Nobody really cares about the ARRL.

Bullshit. Nobody meaning you.

> 4. The ARRL really doesn't care about you.

What do you want? Flowers for Valentine's? Chocolate on your pillow?

> 5. The ARRL has an agenda that does not help Hams.

Ah, yes. Now we're talking... They shot Kennedy, too, didn't they? And they covered up the Roswell conspiracy.

Of course the outcome is the issue. If it weren't then there would be no
debate either way. Besides, what "expertise" is needed to see that
mandatory testing for only one mode out of dozens is wrong? Those that have
"expertise" on the subject are also basing their opinions on personal
feelings and self interests and trying to convince others they are correct.
And it isn't only those that have yet to pass the code requirement that are
```

against it. If it was about to be made a criminal offense to learn or use the mode you would have an argument. As it stands, I can only see the code test being valid if EVERY mode that might possibly be used is tested for proficiency. Then and only then would the code test have a valid leg to stand on.

You have to be really really bad for the FCC to do something. Even police
jammers go on for months before the FCC does anything.

This is easily explained when one considers that there is a significant
percentage of the population that has long since lost the ability to think
independently and use logic and reason to form their opinions. For these
people, it's a Pavlovian response to present emotionally based opinions on
most issues, and simply regurgitate their social groups' pre-programmed
official "mantra"...

YOU believe them to be arbitrary and capricious, Larry. You also
believe that running a computer controlled morse contact is a snap.
That'd make you one of the folks basing an opinion on something you know
little about. Your posting would indicate that you would try to sway us
toward believing that you are correct yet you've based your views on
your tiny bit of knowledge and your "I don't wanna" feelings about morse
testing.

Dave, what the court was saying is that technological change will change the
validity of FCC rules. The Morse code exam requirement was valid at one
time, but today it is not.

You don't think that the Amateur Radio community can not lose frequency
allocations. The FCC must allocate frequency in the public interest.
How is the public interest satisfied by maintaining a non-conforming
requirement?

There are just as many or more of those kind of people on the other
side who operate entirely on feelings and have adopted Morse code as
their creed without considering the long term effects.

What about all the thinking hams who use their logic and reason to
agree with the FCC and conclude that arbitrary and outdated requirements
are bad for the Amateur Radio Service?

1213. Re: MARS (the end of...)

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-26 14:22:16 UTC
From: N9NWO <n9nwo@amsat.org>
Message-ID: <sgIv6.87$Di2.55995@paloalto-snr1.gtei.net>
Source record: 5412

: If the current situation continues, I think DoD will eliminate the MARS
: program very soon. The organization is simply not meeting its obligation.
: Most overseas military installations, even the largest ones, have no MARS
: operation in place. Of those which do, most have a difficult time
staffing
: those facilities.
:
: For example, during the conflict with Serbia a few years ago, there was
no
: Army MARS program in place at all. As a result, the Army had to resort to
: satellite phones to do the job that MARS once did (health & welfare
traffic,
: etc). And the Army was not thrilled about it - it tied up communications
: capabilities that could have been used elsewhere (though this never
reached
: a critical stage, which would have forced that non-essential traffic off
the
: air).
:
: To turn this situation around, hams must make a greater effort to reach
: out to young people. It is too late to license these kids once they are
: stationed overseas (most overseas installations don't have enough General
: class operators to even give the license exams).
:
: Efforts should be made to license kids before they enter the service.
: However, since most military personnel will return overseas several times
: during their career, it is never really too late to help military
personnel
: get their ham license.
:
: If you live near a military installation, consider conducting classes,
and
: exam sessions, targeted towards military personnel. Make sure to
introduce
: MARS during those classes. Offering classes to military ROTC programs is
: also a good idea.
:
: The current situation is not hopeless, but it is quickly reaching a
: turning point. If MARS continues to decline, it will soon reach that
point
: where the situation cannot be turned around.

Health and Welfare traffic started going to AT&T sat phone back during
the Gulf War. MARS is being redirected to FEMA duties, sort of a

replacement
for RACES as MARS operators are far more disciplined in proper net procedure
and work well with military nets.

And what about those code tested "Hams" who don't have knowledge of the various digital modes, ATV, satellite operation, and the list can go on and on? By your logic those code tested Hams are not "REAL Hams" either. They don't "possess the skill to operate" as you put it. What goes around comes around. If you want to conjure up some logic, like yours above, just be prepared to have it applied universally, then we shall see if the shoe fits or not.

> Which is basically what the whole discussion is about...

Amateur Radio elitism organized along the Code / No Code dividing line. You can dress up the CW elitism up anyway you like, but it's bigotry anyway you look at it.

It just so happens that I agree with Larry. And don't let the post April
15, 2000 date on my Extra fool you, I had 13 WPM several years ago.

The snobishness of hams has got to go, else the hobby is doomed to die.

Matthew

Actually the logic would carry me more towards the debate between slaveholders and abolitionists that preceded the Civil War. The abolitionists held slaveholding to be morally repugnant in the strongest possible sense and would never have considered owning slaves. The slaveholders criticized the abolitionists as not knowing what they were talking about and not properly appreciating the finer points of Southern plantation living from the standpoint of being in and among the higher-quality members of that society.

Direct experience does inform a personal opinion. But political questions spring from first principles that provide the context for holding those opinions and assessing their validity. While there is a nobility in working towards a personal goal, there is nothing noble at all in working towards one arbitrarily mandated by a government entity.

I mistyped. It should have read: Following the same logic, it figures
that you believe that non-slaves should not have a vote on the subject
of slavery.

Weren't they published by Hagstrom's and called the Street
Guides? I had the ones for Brooklyn and Manhattan in the late
1940s when I was active in Scouting doing what is now recognized
as Urban Pathfinding. I'm sure that they were available for
other boroughs as well.

Been that way for decades.

After 35 years in the San Francisco/San Jose area I really
enjoy jammer-free and bozo-free 2-meters here ...

Well,

I, for one, am always puzzled and dismayed at all the mess that apparently goes on on the West Coast. Occasionally, we will have a "bootlegger" get on the local repeaters and jam or harass the legit. ops. The local control ops are, apparently, more militant, observant, or obstinate than those out there. Local repeaters get shut down quickly in such circumstances--unless we are quietly Dfing the perp. Then they are left on for the idiot to get his jollies while we close in. Can you imagine the surprise when the fellow finds himself surrounded by 10 or so displeased hams? Why aren't there concerned hams out there that will go after/locate these goofballs?

The bottom line is (here in NC), we simply won't have such goings on. Why ANY control operator would tolerate nonsense on a repeater is beyond me. And I am happy to say that if you travel thru the Gastonia/Charlotte, NC area, you will pretty much find sane and business-like traffic on the machines. The conversations may be pretty mundane, but they are carried out in a dignified manner.

Actually they didn't get to vote. But of course, people who
did not have slaves had a lot to say about the matter.

The Morse code exams requirement is challenged on
the grounds that it not in the public interest and not in
conformity with law. Attacking the petitioner/plaintiff is
irrelevant.

From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3ABFCFE4.51D5@bellsouth.net>
Source record: 5423

Larry,

I can see both sides of the issue. Yes, I tested when CW was a requirement for *any* license. And I began with the idea that, in order for me to achieve my own goals in the hobby, I would have to jump this hurdle. And when the no-code issue was first proposed, I was just as vehemently opposed to such a thing as anybody. After all, I reasoned, *I* had to do it, so why did those that followed get the same privileges without doing the same things I had to do. I was NOT, however, a CW fan. I thought that the Tech Class was as far as I would want to go, so I mostly forgot about the 5 WPM I passed initially. I soon tired of the VHF arena, so I decided, well, here I go again. I gotta do 13 WPM to move on, so alright.......gripe, grump, grumble. Along the way, I found myself fascinated by CW. Without realizing it, I found myself up far past bedtime for that last QSO, and discovered it to be much fun, and I derived a great satisfaction in that this mode that was previously so mysterious to me was now just like the French I took in high school. No one forced me to learn CW. Yes, it was a requirement, but I learned to love it on my own.

My point is simply this: IMHO, the time of the necessity of CW i.e., military, press, and amateur has passed. Now I said "necessity", not that CW should just be dropped and forgotten. I have a feeling that no matter if CW is not required for a license at some future time, it will live on simply because people will discover its wonders entirely on their own. I had no idea that I would enjoy CW, but once I began to deal with it, I discovered its value to ME. Some people are going to love it, others will have no interest whatsoever. I like broccoli, to others, it provokes a "YECH".

Nothing we do here in these forums are going to change the inevitable. *Some* day CW will no longer be a requirement whether we like it or not. In order to promote the hobby, indeed, promote the use of CW itself, we are going to have to welcome those who, in their "natural", uninitiated state may or may NOT know if they like CW or not. Those who might be inclined to learn it, we must help them reach that goal. Those that don't, we must not put them down as if they are some "lesser" class of ham than we who passed thru the hobby's portals in another era. ALL of these new people will be the ones to carry the torch, promote ham radio to the public, and insure its survival into future generations long after our keyers have fallen silent. We, the earlier carriers of Amateur Radio's legacy can have a positive impact on our hobby's future by welcoming and encouraging new hams, persuading our children and grandchildren, and making the path easier for the would-be newcomers. For if the would-be's, instead, become the "not-be's" because we harumphed and

snorted at them because they rang our "bell" under different rules, then
Amateur Radio itself could become a "not-be". After all, the newbies
are not the ones who made the rules; they are just complying with the
ones that exist at the time they enter the ranks. Railing on and on
about CW is not helping. Yes, I wish it were 1969 again--for a number
of reasons. But it's NOT! Can we not move on?

Cecil,

Dadburn it! HARUMPH! I had to learn to drive on a "three-on-the-tree",
so th' way I see it, ever'body orta have to learn on one! Why, I even
had to drive a '54 Chevrolet school bus with a manual! Them dadburn
so-called drivers today got them automatics--the lazy good fer nothin'
loafers. LOL!

I don't recall anybody being upset over the advent of automatics. The
analogy, as you said, doesn't make sense.

Excellent point. I certainly respect and admire those that have and use
their Morse code skills. But, it is not the proper function of government
to impose that proficiency skill upon person, who by there own choice, will
not need those skills. It is the US Constitution that protect the
individual from the unnecessary government regulation.
The Morse code has had it day in the sun, let the next generation have their
day.
Thanks

Well actually, they're the sole protector of ARRL's singulara
interests, first, then if there's anything left, US hams as a group
might get a little attention.
Back in the days of HPM it was as you say. But HPM is long gone.

If this broad, general statement were true, wouldn't it be true for any example one might cite? Or, do you claim that it is only true for the thing that you happen not to like?

Ahhhh, no it's not - unless you define 'live and let live' to be anarchy.

> An HF ham is not allowed to use any mode until
> he/she has first used Morse code to pass the exam.

Not true. An HF ham is someone who has already passed a Morse code exam.

A person who has passed a Morse code exam is not allowed to use any mode on
HF until he has passed a written exam. "Why not live and let live?"

K9AAH (now sk) used to tell this joke at his public talks:

"When out in the field one day, an FCC enforcement officer happend upon a genie. After much discussion, the genie reluctantly granted him one wish. What is your wish, the genie scowled. The FCC man said I wish for there to be peace in the Middle East. The genie thought for a minute and said I'm sorry, but that is not within my power. You must wish for something else. After hearing this the FCC man said well then, I wish for the 435 repeater in LA to be cleared of all jamming and foul language. After a moment the genie said, where was that place you wanted peace again?"

Larry, you are citing a court case pitting a commercial broadcasting
network against a national political party. That the case and its
issues have little to do with amateur radio seems to have escaped you.

Can lose? I don't think that amateur radio will lose any of its HF
allocations though we might see 40m realigned in future.

We don't have a "non-conforming requirement". There is still a 5wpm
requirement for HF access. I don't think you should waste time blowing
smoke up the asses of those congregated in this newsgroup. Mount your
soapbox and spout your homemade semi-legalistic rantings where they
might make some difference. Here your stuff is just cheerleading.

There is no such thing as a "ham life on HF". I see you plan to go on another of your tangents from the "live and let live" thing. You are guaranteed the pursuit of happiness, not happiness itself.

Everyone has the opportunity to become a radio amateur. The Constitution guarantees equal opportunity, not equal results.

You are clearly uninformed as to who is forming opinions
as to the rational and need for code testing. Many, including
myself, have "been there, done that" as to passing the
code test at speeds greater than 5 wpm. Not all those
opposed to continued code testing are so "uniformed"
as you think.

So how come your statement doesn't include the following:

"Surely all hams, military communicators, communications
experts in commercial fields, etc. should be required to
know it (morse)."

The reality is that it is NOT viewed by anyone outside of
ham radio operators (and only some of them), as being
a bedrock of the basics for communications.

You've come close to capturing my view of Larry. Anything he dislikes
or feels that he isn't able to master becomes "arbitrary and
capricious". If he'd spent a tiny portion of the time he has invested
in presenting irrelevant legal opinions, he'd have mastered morse at the
5 wpm level and would have HF privileges now.

In the absense of any contradicting comments,
the FCC sure seems to think so too. I haven't read
one FCC comment that put any rational into
why code should be kept as a test...with the singular
exception being that for now, it still is a treaty
requirement.

So tell us all then why the FCC ended 13 and 20 wpm
testing? In the absence of any rational to sustain such
testing, it becomes pretty much a forgone conclusion
that 13 and 20 wpm had become "arbitrary and capricious"
in the minds of the FCC.

It has nothing to do with me. When the law is against you, pound on the facts. When the facts are against you, pound on the law. When both against pound on the opposition. When all is against you pound on the table.

ITU rule S25.5, and indrectly 47 CFR 97.503(a) indirectly, is the matter before the FCC WRC 2003 Advisory Committee, not me.

5 USC 706, "Scope of review" provides:

"To the extent necessary to decision and when presented, the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of an agency action. The reviewing court shall - (1) compel agency action unlawfully withheld or unreasonably delayed; and (2) hold unlawful and set aside agency action, findings, and conclusions found to be - (A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (B) contrary to constitutional right, power, privilege, or immunity; (C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; (D) without observance of procedure required by law; (E) unsupported by substantial evidence in a case subject to sections 556 and 557 of this title
or otherwise reviewed on the record of an agency hearing provided by statute; or (F) unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations, the court shall review the whole record or those parts of it cited by a party, and due account shall be taken of the rule of prejudicial error."

47 CFR 97.503(a) is arbitrary. Therefore the rule is not in conformity with law,
but it exist and only exist because of a long standing obsolete treaty requirement,
ITU rule S25.5.

How long will the US government keep signing a treaty that impose an unnecessary requirement upon its citizens? 10 years? 50 years? 100 years? Why no make the Morse code proficiency exam a requirement for all Federal licenses?

A better translation:

If the Amateur Radio rules can not allow reasonable and lawful public access
to
the HF bands, why continue the service? The cost of continuing the
Morse code exam may be a lose of spectrum or worst, the entire service.

Read it again. The Court noted that "the problems of regulation are
rendered more difficult because the broadcast industry is dynamic in terms
of technological change; solutions adequate a decade ago are not necessarily
so now, and those acceptable today may well be outmoded 10 years hence."

Dave, thing change, now it time to change the rules.

Then fix the written exam, don't hang on to a superfluous code exam.
It's like the Q&A are published for driver's licenses so examinees
will be tested on cranking an automobile engine. Effort for effort's
sake is not a valid reason for an exam.

The two main reasons for hams knowing Morse code, mitigation of
interference among radio services and a trained pool of CW operators,
are not valid anymore.

Live and let live is allowing an HF ham to choose his first mode.
Right now, he has no choice. He is forced to make OOK/Morse his
first mode.

When I was in San Jose around 1973, the Mt. Umunum (sp?) repeater
was jammed by some character who hid a fox hunt transmitter in
a hollow tree in Big Basin National Forest. We had a heck of
a time finding it.

1261. 2m Repeaters A Mess in LA?

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-27 05:29:58 UTC
From: jstan10 <dummy@address.net>
Message-ID: <tbverdmakuvi52@news.supernews.com>
Source record: 5420

I happened to be travelling through LA last weekend and used the opportunity to listen to W6NUT repeater that was talked about. I, however, noticed the increased level of jamming and unauthorized use of the frequencies. Particularly in the repeaters in the low half of 147mhz.

What gives? Is LA always like this? This is hugely worse than here in San Jose.

Best place to look for it might be the same place where they gave rationale
for keeping any of the other requirements - wherever that is.

That's not true. I'm an HF ham, and FM was my first mode. Most hams start
on FM. You're an anarchist, I think. ;-)

> > > An HF ham is not allowed to use any mode until

Only non-HF hams and unlicensed people need to take a code test in order to
operate HF. HF hams are the one group of people who can claim they don't
have to take a code test before they operate HF ham bands - by virtue of the
fact that they've already taken at least one. Otherwise, we wouldn't call
them HF hams. Right? :-)

Correct, except that you can renew up to 90 days before the license
expiration date.

You can also renew online via FCC's ULS site
(http://www.fcc.gov/wtb/uls/), although some people find it a pain to
use.

I just knew that some idiot would answer this
question like that!

This poor fellow asks a legitimate question,
and the idiot brigade answers in full force,
simply because he mentioned that he
is/was a technician class licensee.

Let me ask you a few questions Dick.

Will passing a 20 wpm test make him a
better ham?

Did passing a CW test make you a better person?

Is being polite that difficult?

Remember what your mother said: If you can't
say anything nice, don't say anything!

73

Gary WG7X

Yeah, I passed the CW test at 20 wpm, so what?

That singular exception makes HF morse testing the law of the land, Bill
so it must have some bearing. That is certainly more than comes from a
homemade lawyer quoting from a court case between a commercial
television network and a national political party. Larry's chants of
his new age mantra are a bit premature.

It's supply and demand, Dick. How many hams are necessary and sufficient
to meet the goals of the ARS? Whatever that number is, the ARS needs to
be promoted and the requirements need to be adjusted. It works the same
as for an all volunteer army.

The two matters have very little to do with each other, Bill, no matter how much you might wish they did. Why can't our "I-found-a-law-book-under-a-tree" expert cite a case involving amateur radio? Could it be because there aren't any such cases?

Oh, I don't believe it had so much to do with that issue as it did the
direction the political winds were blowing. We're in a new era of
political correctness--one in which no one's self esteem may be harmed
and in which we are all equally mediocre.

That's one of the biggest pieces of misinterpretive crap I've seen in a long time, Larry. It certainly isn't a better translation for your statement. We already have reasonable and lawful public access and everyone has an equal opportunity for an amateur license.

I assume that you refer to a *loss* of spectrum or--*horrors*, the entire service. I'd hate to think that we are in danger of losing amateur radio because Larry Klose can't pass a 5 wpm code test.

Larry, I read it again (only because you saw fit to post it again). It
still says, in letters which stand out rather plainly to me, "...the
broadcast industry...". I thought surely you'd notice those words on
second reading too.

You may have a point, Larry. The rules of chess have been static for
far too long. Let's get 'em changed. Rooks should have two moves
during the period of play, in which they are permitted to move any
direction--sort of a chess "gimme". In approaching an opponent's queen
(with any piece), the opponent must ask, "Mother may I?" before moving
his piece.

I used to have a grade school teacher who would occasionally ask a student if he planned to learn anything or was going to continue wasting air and taking up space.

You need to renew it. And since you have a computer, and apparently
an internet connection, one can assume you have a web browser and have
used it. Therefore, it should be no trouble for you to surf to
http://www.fcc.gov/wtb/amateur/amrenw.html and check out what you need
to do in order to renew your license.

Probably for as long as they believe it has applicibiltiy to the
amateur radio service and is important enough to require knowledge and
skill in its use by US radio amateurs.
You can always hope their viewpoint changes sufficiently to get for you
what you would have got for yourself had you been more of a "doer" and
less a whiner.

I just KNEW some idiot would be incensed by that reply...Just coultn't help myself, did it anyway.

You'd think that with a computer on the internet a fella would at least make a stab at looking for the information needed to renew his ham license, wouldn't
you? Makes it look like he has about as much interest in renewing as he did in getting a ham radio license in the first place - little to none. Just enough to ask someone else to do all the "hard" part for him.

Speech is basic to Homo Sapiens. Morse code is not. Morse code
takes weeks or months to implement. I cannot think of another
mode that is more difficult to implement than Morse code.

I once asked my boss at Intel, when did I start working there. He said,
"Are you asking when you showed up or when you started working?"

Yes. I don't know if you knew K9AAH, but he was our local retired FCC guy and club member. It was at least some comfort to know that 435 was just as big a thorn in the side of the FCC as it was to the rest of us. Riley has had a pretty big influence over there of late. You actually hear callsigns on that repeater every once in a while!

I knew Jerry Man (a shortening of his legal name) and his
family very well. He had a home in San Juan Capistrano and
another one in La Jolla...stayed at the La Jolla place during
the week and the Capistrano place on weekends. He retired on
the same day and under the same conditions as I did. We used
to see each other and trade war stories at the FCC Alumni and
Survivors get-togethers, but it's sad to report that he passed
away a few years ago.

> your statement is moot.

But I ran FM and SSB before I ran CW - because I was allowed to by the FCC.
I had by no means mastered OOK/Morse when I first got on HF - nor was I
required to. You heard me on the CW net a couple weeks back. Had I
mastered OOK/Morse even as of that date? :-)

By the way, Hans graciously sent one of his QSL cards my way. I think it's
suitable for framing. Quite elegant.

Dick,

I can agree with your sentiment, I just
disagree with your method.

But you bring up an important point. Why don't
some of the fellows want to read and learn about
this great hobby? I too, get a little tired of the constant
requests for information that is readily available if the
person concerned would only take the time to do the
necessary research.

Well, anyways, that's my two cents worth.

Back to looking for DX...

Only an "increased" level of jamming and not a constant level? I guess one or more of the misfits were taking a break from radio when you listened. (Or perhaps they were all over on 145.460-, the alternate "animal farm.")

What's funny to us here in L.A. is that the FCC actually bothers to take all kinds of enforcement action in the rest of the country (e.g. getting uncoordinated repeaters causing interference off the air, etc...) - at least according to reports by TWIAR and Newsline, yet some of these same violations occur DAILY here - and have occurred so for over 10 years on a daily basis, yet there is no apparent enforcement. Only in the past year has the FCC even bothered to make inquiries.

What you encountered was probably LESS than the normal level of such activity. Then again, some of the misfits also happen to be in jail right now.

One reason: By allowing them this repeater (and its alternate), we keep them contained.

Back in 1993, when we had the fires in Malibu, the W6NUT repeater (back then, under the trustee's call of AA6TK) also failed. Most of the users migrated to the CLARA repeater (145.220-), and some time later, some of them were brought into California Superior Court for harassment. This is the original source of our local term "restraining order repeater." When the 147.435 repeater came back up, most migrated back.

Also, the 147.435 repeater is the only repeater that has bullet holes and dents in it. I believe that one can see pictures of such on its users' web site: www.435.org.

Well DICKhead (may I call you DICKhead?),

Have ya ever thought of doing that through computer too?

I very well doubt you will copy me via the ear at 200wpm. And all those who are uncopiable via computer are going to be uncopiable via the ear .. .even at 5wpm.

Once again, there are better digital modes to use, i.e. psk31 for those low low signals.

That's not entirely true. The entire truth is that I was forced to learn all kinds of things - Morse code being just one among them. I was forced to learn the correct answer to each of several hundred questions. That's also what governments do.

Hans got the worst of the deal in our QSL trade as well. I made up my QSLs using a QSL card program I downloaded from the internet. Kind of a fun program to use, actually. I used an old picture of the Silverado Blue Light mine from the turn of the century (the previous one) as the background. My guess is that Hans spent a pretty penny to make up his cards.

But, Dave you missing the whole point, 5 USC 706 only applies to
government agency rules and actions. It does not apply to the
rules of chess. Now if a government agency mandates that chess
had to play by a certain set of rules, and a particular chess club has
different rules that the government bars, then you have a case.

It was a US Supreme Court decision not an FCC commercial radio rule.

Whether or not the treaty requirement is "obsolete" will be decided in 2003.
>
>How long will the US government keep signing a treaty that impose an
>unnecessary requirement upon its citizens?

"Unnecessary" and "obsolete" are in the eye of the opion-holder, Larry. As it looks now, a growing number of signatories to the treaty will vote let S25.5 quietly disappear in 2003.

>10 years? 50 years? 100 years?

I don't know. I do know, however, that for the past 33+ years, whenever the question of code testing for an HF ham license has come up in the USA, the majority of those who bothered to comment to the FCC have supported continued code testing. That's one of the main reasons the requirement has lasted so long. Note that I'm not saying "the majority of hams" but "the majority of those who bothered to comment".

That majority used to be overwhelming, but in the past 15-20 years it has slowly decreased to about 54-46 in favor of code testing. That trend was not lost on the FCC.

>Why no make the Morse code proficiency exam a requirement for all Federal
>licenses?

Because all Federal licenses do no involve the use of Morse in radio communication. HF/MF ham radio uses Morse extensively. But even that extensive use is not reason enough for the FCC, who have said that the treaty is the only reason they have left to continue the Morse test. They have eliminated all but the 5 wpm test because 5 wpm is generally considered to be the minimum that meets the treaty. When the treaty goes, how long do you think 5 wpm will last?

The reasons the FCC doesn't just ignore the treaty are:

1) It would set a very bad precedent.
2) They don't have the authority
3) They don't think 5 wpm is an unreasonable requirement at the present time
4) There is no mandate to do so.

No the FCC said the 13 & 20 wpm test did not serve a regulatory purpose. To wit:

" 25. Decision. We have considered the comments on this issue and conclude that the public interest will best be served by reducing the telegraphy examination requirement to the minimum requirement that we have found that meets the Radio Regulations and that has been accepted as proving that the control operator of a station can ensure the proper operation of that station. To achieve this result, we will amend Section 97.501 of our Rules to eliminate the requirement that an individual demonstrate 13 wpm and 20 wpm proficiency in telegraphy before qualifying for any amateur radio operator license. In reaching this decision, we note that one of the fundamental purposes underlying our Part 97 rules is to accommodate the amateur radio operator's proven ability to contribute to the advancement of the radio art. We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art. "

"As a result, we find that such a license qualification rule is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose. "

"Consistent with our decision to eliminate 13 wpm and 20 wpm Morse code proficiency as licensing requirements, we also are streamlining Section 97.503(b) of our Rules to reduce the number of telegraphy examination elements from three to one -- specifically, a 5 wpm telegraphy examination. We also conclude that, due to the Radio Regulations, we can not grant the request of the ARRL that we authorize privilege on all amateur service bands below 30 MHz to Technician Class licensees who have not passed a telegraphy examination. While we do not disagree with the ARRL's belief that the best way to learn telegraphy is to use it on-the-air, and that actual use of telegraphy to communicate is proof of the ability to send and receive telegraphic texts, the Radio Regulations provide that the telegraphy requirement may be waived only for an operator of a station transmitting

exclusively on frequencies above 30 MHz. In this regard, we also note, as the ARRL states, that the Radio Regulations remain an obligation of the Commission that can not be waived. "

I don't know, Larry. I've never tried it. I do run the transceiver without the amplifier most of the time, but I hardly ever turn the transceiver down except when talking through the local repeaters (or talking to someone locally, with is relatively rare). Therefore, I don't really know what the bottom end for SSB is with lower watts (how efficient SSB is with lower watts). And I've certainly don't know how efficient it is when compared to CW, so I'm more than willing to accept your word for that.

SSB is a lot more efficient than CW if one doesn't know Morse code. :-)

Not usually. It usually represents a cardinal or ordinal number.
If we label people according to their age, there might be a
number of 73's among a large group of elderly people.

> So if I say 73's wouldn't that mean Best's Regards's..

Nope. Best and Regards are not numbers or letters which is where
one uses an apostrophe for pluralizing. What's wrong with
"Lots of Best Regards"?

Yep, I do seem to remember a conversation with you about this some time in the not so distant past. And, yep, code was pretty much gone in the Army when I went to signal school in 1970. In my job (MOS 31M), we used SSB voice for most communications, with printed data transfered with RTTY or encryption. However, some MOS's (Military Occupational Speciality) were still using it because I did occasionally hear it in the halls of the school. But, as I understand from talking to other vets, even those MOS's dropped code not long after that (and the training officer at the Army's Signal Training Command has verified that no MOS requires it today).

Nope, you don't pluralize 73 because "dollars" is plural. Picture a
group of elderly people with their ages printed on their nametag.
"How many 73's do we have?" would be a perfectly acceptable question.

I'm sorry, but you're not getting my thermonuclear device until you pry it from my cold deap fingers (not to mention a few hundred thousand other cold dead fingers).

Anyway, lets not be silly - the two examples just don't fit together. Private ownership of firearms is a tradition that goes all the way back to the very start of this country (every person who signed that Constitution, and the Bill of Rights, owned a gun), but I'm not aware of anybody who is honestly suggesting a right to privately own a thermonuclear device, nor is there any tradition of such ownership. In other words, these two are not even in the same ballbark - in either capabilities or political debate.

I'm not sure I follow you... What might those "ARRL's singular interests" be and what do you propose as an alternative to the *only* national amateur radio organization? Cutting off one's own nose to spite the face is usually not a smart choice.

Look, clearly it is in every US ham's interest to retain as much spectrum as possible for as long as possible. Fiber optics in every house will alleviate the pressure, but it will not eliminate it. Everything else is petty stuff which is not critical for the survival of amateur radio. Once we absolve this fact, the choice is simple: we either support our one and only ham radio representation in the world or not - we keep our hobby alive or not.

Maybe he needs motivation. As for what may motivate him, I leave that to your imagination. ;-)

As long as he isn't a lifelong loser/jammer such as those who frequent the W6NUT repeater, who really cares?

Well, geez, every person who signed that Constitution was also a slave owner,
but you could hardly condone that nowadays, especially with all these nutcases
running around demanding their $1 million retribution in gold bars.

> , but I'm not aware of anybody who is
> honestly suggesting a right to privately own a thermonuclear device, nor is
> there any tradition of such ownership. In other words, these two are not
> even in the same ballbark - in either capabilities or political debate.

Why not? I am simply asking for consistency: a thermonuclear device falls into
the same category of "firearms" as a six-gun. They are both devices used for one
purpose only: to kill people. Everything else is a smokescreen. Now, it would
seem to me that the very same amendment you guys are pulling in the case of
handguns, rifles and automatic weaponry must cover *all* firearms. One person's
definition of danger is another person's definition of safety. What this boils
down to is this: that amendment is somewhat anachronistic.
Btw, neither you nor Dick commented on the second part of my example - the
narcotics use. But I admit, here we are dealing with one of those things that
make people feel good and politicians re-elected. War on drugs. Any day now.

73 ..... Zoran WA7AA

And in case anyone's wondering: I own neither a handgun nor a TND, but I do
support a right to bear a handgun or two; I also support legalization of all

drugs except to minors, followed by revamping of the legal system with the emphasis on expanding a death penalty. Too radical? Hell yeah, but with 1% of the US population in prison, something better be done before it gets worse.

I wouldn't call the ARRL the "sole" protector of amateur radio in the U.S.
Many amateurs, whether as individuals or as groups (clubs, repeater
coordinators, or others) comment on pending FCC rulemakings and write
Congress-critters (as they are called in another newsgroup). Only if the ARRL
were the only entity talking to the government would the title of "sole
protector" be appropriate. Nothing says that each individual licensee can't
comment directly and must go through the ARRL.....

Nothing says that - you're right. However, how much clout do you think US hams would have with FCC and congressmen if they kept showing up in groups of 5 to 10, without unified representation, on a strictly individual basis? We could all comment ourselves right out of all the spectrum.

Nothing says each individual US citizen can't fight an invading army on his own and in groups, but doing that would be the biggest mass suicide since Jim Jones. That's why we have the US Army. And that is also why we have the ARRL - to have a strong, unified and committed representation so we don't look like a bunch of jokers. Frankly, I don't understand what's all this dislike of the ARRL - what's the big grudge? Would someone care to explain?

That's why I gave him a straight-up answer. Fiddly-farting on fcc.gov to get the 20 pages of the Form 605 plus instructions and getting it set up to print only what you want would motivate anyone to something, most likely suicide but certainly lifetime licenses.

RG:

If you can't find that information out for yourself, then, by all means,
do let your Tech ticket expire.

Hint: You obviously have the technology to post a message to a
Usenet newsgroup. You can find the information you need using the
same technology, only in a somewhat different way. Don't you
have a web browser? Can't you do a search?

Another hint: Which government agency is in charge of amateur
radio licensing? Think they might have a web site?

Yet another hint: What is the national organization for amateur radio?
Think they may also have a web site?

Did these hints help -- or are you really as helpless as you seem?
Remember -- amateur radio is not a hobby which is intended to
attract technically inept people...

>a CW transceiver.

Cecil:

How much you wanna bet I can come up with a simpler, easier,
cheaper, and faster to produce CW transceiver design than your
AM transceiver? And don't look now -- but I "learned" the Morse
code at greater than 5 WPM capability in about two days. Can
you teach someone how to speak fluent English in that amount
of time?

>The spread of CW is getting more narrow all the
>time. 2/3 of US hams use it rarely or never.

Knock, knock -- Earth to Cecil -- Why do you think this is so?
Could it be because we've reduced the code testing requirement to
the point of insignificance, that nobody is bothering to learn it
anymore?

>CW is a fun mode for some but it is just another mode and should be
>optional like any other mode.

I have absolutely no objection to the USE of Morse code by individual
amateurs being an "option." However, this "option" won't exist unless
there is a basic REQUIREMENT that ALL hams learn this mode and
demonstrate useful proficiency at it prior to being granted HF privileges.
It has already been proven that people from the age of 5 to the 90's,
from all walks of life, and even people with severe, disabling handicaps
(including total deafness) can learn and effectively employ the Morse
code not only in amateur radio, but their daily lives. The problem here
is the uncanny ability of liberals like yourself to sell short the abilities
of their fellow human beings. This is a very common sign of emotional
and intellectual immaturity -- the Self As Center Of The Universe
syndrome. You project your own weakness and insecurity on others,
even though others don't have your problems. Get help.

>What is wrong with live and let live?

Nothing. If you truly beleve in it, why don't you want the Morse/CW
mode to "live" in the ARS -- knowing that deleting the code testing
requirement will surely kill it?

Dick:

Thank you, thank you very much! I've only been saying this to Cecil
(and everyone else) for the better part of ten years. All the while, the
only rebuttal has been the usual strawman argument that code testing
was somehow going to prevent AMATEUR radio operators from
developing the latest high-speed, mega-throughput digital modes,
as if hams hunkered down in their workshops did that sort of thing...
you know -- homebrewing their own multi-million transistor chips, etc.
The connection between code testing and technical development has
always been the crux of the No Code Testing Agenda - NCTA. Too
Bill Sohl has just put an end to that argument by admitting that the
NCTA's were wrong!

Come on now, even Clinton couldn't make that one fly.... A gun can only
kill a single person within the shooters' direct line of sight per
discharge. This weapon targets a specific person, and has the option to
only wound, as well as kill. It does not destroy the surrounding buildings,
all life forms in the surrounding area, and pollute the land with radiation
for the next several centuries.

If what you say were true, then the ATF would be enforcing the laws
regarding Nukes... :>)

What is it with everyone?

I have been a class b (no code Amateur) here in the uk for 15 years, the great thing about amateur radio is the wide range of activities we can participate in from hf cw to microwave, my own interest has been vhf/ slow scan, packet, and fast scan and also having good old chats with fellow hams, we are all supposed to be in the same hobby and we serve the hobby no good by arguing who is better than who.
since i passed my nocode class b i have continued learning about the hobby and also the technical aspects of it at my own speed and enjoyment and everyone else should be alloyed to do the same.

Now if the powers that be feel that morse code testing does not serve the interest of the hobby then fine, it does not lesson the technical qualifications of amateurs.

And on a final point, over here i have noticed that in the 15 years i have been licensed the bands have got less and less used, 70 cm very unused, 2m very quiet these days, even repeaters 6m quiet unless there is a lift on. If we don't start to all get on and enjoy the hobby we still have we may not have a hobby left in 10 years time, then we can all argue the nocode issue until we are blue in the face.

Regards
Mark

foggiest idea of what the code is ...

> > I very well doubt you will copy me via the ear at 200wpm.
> You're typing 200wpm? yeah, right! Wow, Whatta guy...

Did I say I type 200wpm ...nope ... I didn't ... 99.9999% of the readily
available programs out there will allow you to buffer your tx data and then
send in one big clump

> And all those who
> > are uncopiable via computer are going to be uncopiable via the ear ..
.even
> > at 5wpm.
> So much for your "expertise" on the subject of Morse code.

With this cheesy software I have (cwget), It pulls out frequency data
through an fft. All you do is tell the software which freq to use (by
clicking on the spectrogram) and it will then output at the bottom, a
amplitude vs time graph. You set the noise level and it will then decode
the morse.

All that could be done automatically. You will notice that in real life
when you are listening to the radio, lower signals will be difficult to copy
because of the noise (high frequency stuff) will mask that 900Hz signal you
are tryin to listen to.

> > Once again, there are better digital modes to use, i.e. psk31 for those
low
> > low signals.
> Sure there are. All you need is a minimum few hundred thousand active
> devices and the software to go with....

digipan software, a computer keyer (can be built for around $5) and an audio
cable to have the outputted audio from the radio sent to the computer ...

Red Lion decision was a warning to the FCC that technological change requires a review and change in the rules. Congress now requires that the FCC review its rules every two years. 47 USC 161.

47 CFR 97.503(a) in non-conforming with 5 USC 706 because the code test is unnecessary and not in the public interest, not because of the Red Lion decision.

Hopefully, such a poll would be better designed than the 1996 one. But I'm NOT talking about polls, surveys or newsgroup posts. I'm only talking about comments and other communication to the FCC. That's what really matters.

The same can be said for any mode or regulation. How many hams use EME? SSTV? Satellites? Far fewer than use Morse - but those subjects all have a place in the written testing. Not as a single element, of course. The fact remains, though, that in order to get the license, I and many others had to learn all sorts of stuff that we never use on the air.

Radio is not basic to Homo Sapiens. Morse code is basic to radio
communications.
Morse code is quickly and easily implemented by persons not too lazy and
useless to have learned it. Ir naturally follows that Morse code
qualifications should be a integral part of any amateur radio licensing
scheme since radiotelegraph operations are widespread within amateur
radio, and potentially useful on moments notice.

There are a number of new "no code tech" licensees in my part of call area 9. They are enthusiastic to the *EXTREME*, well behaved, good ops. A couple are still in elementary school and (1) are learning every second they are on the air and (2) giving the experienced ops a big mental boost becuase they have someone on the air that they can "show the ropes".

Thank God they are not surrounded by a bunch of old-fart, cynical, name-calling, holier-than-thou or vulgar-as-hell "examples" of hamdom like many that frequent these newsgroups. Let's hope they never learn they are not "real hams" because they would probably joins the ranks of former and inactive hams, of which we have far too many already (and in my opinion, there are a whole bunch of you who should be in the category but aren't - you and the rest of us would both be much happier I think if you were to stop your tirades and tantrums and take up woodworking or needlepoint to fill your idle hours).

You are just as wrong as you can possibly be, as most anti gun people consistantly are. I have absolutely no intention of killing anyone with a gun, but I also have no intention of allowing you to confiscate them. I DO have an intent to use them - the mere existance and presence - to deflect those who would cause bodily harm to me and my family. Almost always, the mere sight a weapomn of defense is more than enough to put the coward to flight. Should the assailant be in an unusual state of mind, such as drugged or insane, and insist on forcing me to use a firearm to stop him, of course that would be the natural progression of things.
Soit was when columnist Mr. Carl Rowan, a rabid anti-gunner, shot an intruder. He sure changed his tune in a hurry. Curious thing, that he even OWNED a gun, what with all his anti-gun rhetoric, isn't it? Do YOU own gun, by the way?

Now, it would
> seem to me that the very same amendment you guys are pulling in the case of

I'm not real eager to take seriously the opinion of anyone who can't differentiate between a personal firearm and a nuclear weapon. Looks like a screw may be loose somewhere.

Larry, I guess we should all acknowledge your legal prowess and your
vast experience in radio. I guess I would if I thought you knew what
the hell you are talking about. Like it or not, if you'd like to put a
signal on the HF bands, you'll have to pass the minimal 5 wpm test for
the foreseeable future. You'll not get your "gimme" any time soon.
I, for one, would not sit and wait until 2003 if I wanted to access the
HF bands, I'd be busting chops to learn that code and get my upgrade.
You, on the other hand, can sit here bemoaning the inequity of life
until then.

> I'm not sure I follow you... What might those "ARRL's singular interests" be

First and formost, selfpreserveation, on a the BOD level. Consider the
January vote on whether or not to support code testing at the next ITU
meeting.
The vote to drop code testing was by a voice vote, with no identity of
who voted how. There was a lone effort by a BOD Member to poll the BOD
for each member's vote, which was quickly voted down. None of those
voting against keeping code testing wanted his vote made public, and
without a individual poll of the vote it will not be, officially at
least. Since the BOD members are elected as individuals, the entire BOD
can't be held accountable for such a vote since they can't be elected
nor unseated en masse.
Just a bit of defense against the will of a large bloc of ARRL
members' wishes. Selfpreservation at it's finest.

and what
> do you propose as an alternative to the *only* national amateur radio organization?
> Cutting off one's own nose to spite the face is usually not a smart choice.

Oh, no, alternatives haven't proved viable to date. Just understand that
the enemy is not always outside looking in.

>
> Look, clearly it is in every US ham's interest to retain as much spectrum as possible

> for as long as possible.

Not at all. We use little of our UHF/SHF allocations, and it might very
well be in our best interests to "trade" some of that unused real estate
for some we could make better use of, maybe on HF or VHF. I think that
most of the Part 15 intentional radiator devices would be much better
off above UHF instead of on HF where they do far more damage, but that
battle was lost long ago.

Fiber optics in every house will alleviate the pressure, but
> it will not eliminate it. Everything else is petty stuff which is not critical for
> the survival of amateur radio. Once we absolve this fact, the choice is simple: we
> either support our one and only ham radio representation in the world or not - we

Yes indeed, only in terms that are more basic and harder to refute.

How can anyone say that radiotelegraphy is "useless" when it can be
accomplished
at minimum by a single vacuum tube device acting as both the transmitter
and receiver, a device which any competent ham can put together, while
it takes hundreds of thousands of active devices plus extensive
extremely complex software which very few hams can produce to use any of
the more advanced digital modes?

Actually, pistols are most often used as a deterrent to avoid killing
people. All I had to do one night was to display my 9mm and the mugger
with the knife broke an Olympic record running away.

Did you hear about the eight year old who got suspended for pointing a
chicken strip at a teacher and saying "pow"? One wonders what would have
happened if he had pointed the chicken strip at a teacher and said, "yum".

And since when is in the public interest for ham radio operators to be
allowed to avoid causing themselves to be functional in the most basic
radiocommunications mode?

Answer: Never.

Your opinon is your opinion. Nothing more, and certainly not the law of
the land nor a court decision. The fact that technology ALLOWS other
more efficient means of radio communicaitions does not mandate that they
will always be available nor the mode of choice. No one gets to choose
the mode all the time.

Since S25.5 will probably be repealed and since a ham doesn't need
to know Morse code to participate in emergency communications.

Any ham who wants to give up amateur frequencies to the commercial
interests has a death wish for the ARS. That's you, Larry.

You don't read very well, do you, Larry. Read it again.

> And don't look now -- but I "learned" the Morse
> code at greater than 5 WPM capability in about two days.

So, given my stated boundary conditions, you don't get to start on
your CW transceiver design for two days. I can whip out an AM
transceiver in less than one day. You lose. And any old transistor
amplifier can be used to modulate an AM transistor transmitter.
I have three of them in my garage.

> >The spread of CW is getting more narrow all the
> >time. 2/3 of US hams use it rarely or never.
>
> Knock, knock -- Earth to Cecil -- Why do you think this is so?

It doesn't matter why it is so. All that matters is that it is so
and is becoming more so all the time. Earth to Larry - this is the
21st century. Things have changed. You cannot live in the past.

> I have absolutely no objection to the USE of Morse code by individual

If it's required, it's not optional, now is it?

> The problem here
> is the uncanny ability of liberals like yourself to sell short the abilities
> of their fellow human beings.

Nope, you're the one who sells your fellow hams short. You think they won't
learn Morse code without a governmental affirmative action program. Sounds
to me like you're the socialist. I'm just a Libertarian who believes the
least government possible to accomplish the function is the best way to go.
The Morse code affirmative action program is bad for the future health of

the ARS.

Ah, very good. trying to get a machine to think like a human. It still
can't come close to copying under conditions that a skilled human can. I
suppose if that's what you've got, you gotta use it. I'd just forget it
and use PACTOR or something else.

>

Your computer could never begin to copy CW under the conditions I
learned to copy under. The receiver of the day was a WW2 bomber set

which covered the entire novice band in ï¿½ inch of dial. I don't know what the bandpass was, but you could hear a substantial of the entire band at any one dial setting. One quickly developed the "filter between the ears" which zeroed in on a single signal and just tuned out all others. Try that with your computer. I've used a number of software packages since computers came into use and so far nothing has come close.

Rob you got here a little late..we all know about all the glitzy new modes, how well they work and what it takes to make them go. Many of us have used them, some extensively. I was an early PSK31 user and found it to be a neat mode, though not as good as billed by the raving techies. But there is still no other mode than radiotelegraphy which does so much with so little.

Dick Wï¿½EX

1376. Restructuring -- did it make a difference

Newsgroup: rec.radio.amateur.policy
Date: 2001-03-28 19:47:25 UTC
From: K0HB@qwest.net
Message-ID: <99tf4djmv1@news.netmar.com>
Source record: 5776

We have about 10 months worth of figures behind us, and it appears that restructuring has had little effect on the total number of licensees, but it does seem to have put more people on HF.

Looking at the no-HF/minimal-HF classes (Tech, Tech+, Novice) they have lost about 23,000 people since last April, and the full-HF classes (General, Advanced, Extra) have gained about 28,000.

It's not everyone here in the USA, just a select few who have a bug about non-CW code tested Hams. Hang out on this news group for a short while, and you will get to meet some of those select few. You can do that by suggesting to get rid of the CW code testing requirement, and they will announce themselves by getting on your case like white on rice. Never fails.

Heck, consider it just slang. Personal preference if need be. Question is, if you are going to make it plural, what is the apostrophy for? A contraction for 73 is or is that the possesive form?

Leland, you and I know what sort of flames can start with that old saw code vs no code. Seriously however, perhaps someone might enjoy a CW qso at perhaps 30 WPM with an extra. Are you sure that guy is really doing 30 - or is he using a computer? Hmmm .... come to think of it, if I get back on HF CW, I might be accused of using a computer; however it would be simply a case of being fussy about my fist and having the keyer dot-dash ratio set properly. However, if it is not possible to know if it is a human or a machine sending and receiving the code, it would seem the whole argument is moot. It is fun to handle those arguments on one of the repeaters, however. One guy was going into the rants about the necessity of CW and we simply switched to about 40 WPM F2 emission (yes, the repeater owner was in the gang and he said 'go for it' - he has no problem with 40. It did quiet the discussion down. A lot.).

73 from Rochester, NY
Jim

ps - what's the new nomenclature for F2 anyways (not that it is of earthshaking importance)?

Well, 'round these 'hyar parts, we ain't gonna have no "sich" carryings-
on! Them fellers don't git NO repeaters left on to git their jollies
wit'! LOL!

It still escapes me how seemingly grown people can exhibit such
infantile behavior. Like I said, most of the control ops around here
are very militant and particular as to what they allow to transpire on
their machines, and they will drop one out from under an idiot in a
New Yawk minute. The vast majority of local hams are in lockstep with
the controllers. As we sometimes say in our Southern drawls, "We ain't
a-gonna have it!" I wouldn't have patience with such immature clowns
either on a repeater or OFF.

It is obvious that the outlook on life is vastly different here in the
Southeast than on the Left Coast. Without putting down those mature,
reasonable, and responsible hams, I must say I cannot understand what-
ever it is that makes people revert to infancy, or whatever condition it
is that causes this behavior. I wonder what these jerks would do if
they migrated to NC, and found that no control op would tolerate their
antics? Maybe that is why you don't hear much about NC repeaters and
Riley H?

What difference does that make ... the whole idea to radio communications is the communications ... whatever mode you use to get the information accross is irrelevant.

Simply because you had a bias towards the nestalgia of cw. And, I didn't tell you how to get it working because I thought I was the first to do it ... I did it because you said that it takes a lot of equipment (showing your ignorance)

I love a good pedantic argument, so... Using "'s" to form plurals of letters and numbers is common, accepted practice. See the "Handbook of Style" chapter of the Merriam-Webster "Webster's Ninth New Collegiate Dictionary" for one reference.

The FCC did not use the word superfluous to justify deleting
the 13 & 20 wpm code test. They said the tests served no
regulatory purpose. They did not justify the 5wpm test, except
to say it met the international requirement. Unfortunately,
the FCC did not give any insight on how they would view
the 5 wpm test when S25.5 is deleted. The FCC made
no superfluous findings.

This should RRAP group arguing about the code test
until 2004. :-)

I've tried all that. You won'd get close to manual CW copy in noisy
conditions with any computer program.

Of course I didn't say whan that was, but it was a hell of a long time
ago.
And that makes no difference whatever to you because you have no
intention
of learning it at all. And of course you know all about it. If you gave
out ham tickets with Cracker Jacks you wouldn't do any better. Might
draw few dinks like you.

> Simply because you had a bias towards the nestalgia of cw.

Until you learn how to copy CW in poor conditions you won't have a
clue. And that means you'll remain clueless.

And, I didn't
> tell you how to get it working because I thought I was the first to do it
> ... I did it because you said that it takes a lot of equipment (showing your
> ignorance)

A computer and a compatable SSB capable radio-- several hundred
thousand active devices. Not really that much,huh, I guess you carry a
computer around with you at all times. Right.

No way, Leland. When we see someone who cannot or will not face the
reality of a code requirement, we have to come down like Monty Python's
big foot or we would simply be enabling denial mode. It is the bleating,
not the opinion, that gets the reaction.

An apostrophe is often used when making letters or numbers plural - for example 45's (more than one 45 music record). Of course, it is just as common to not use an apostrophe, but many English fanatics would insist the apostrophe is virtually required (the number "5" replaces the written "five," so to add a written "s" to a number would require the apostrophe because of it's combined form). In other words, it does not refer to the possessive form of the number unless used in that context in a sentence.

I dunno about that ... I think 80 gets pretty awful sometimes, and even using my wr1500i which has a pretty bad receiver I can pull em out easy enough. Its not that hard ... as i said ... when you can see amplitude vs frequency data for the audio spectrum its just a matter of clicking where the appropriate signal lies ... and you will see it on the graph even when its barely audible ... once you have picked the appropriate frequency it will be easy enough to take the morse out of it since you have essentially masked the other frequencies out. And, anyone who has dealt with audio will tell you that higer frequency stuff (8kHz+) will mask the lower frequencies quite nicely to the point that they may be unrecognizable.

Well when you consider the whole point to the licencing in the first place was to make sure that operators had the skills required to be able to operate properly. I don't see how cw is required to operate properly. However, I'd say teaching people manners and testing them on it would be nice.

> Until you learn how to copy CW in poor conditions you won't have a

Well I carry one around about as many places as I have a radio. My home station and in the car. It's pretty much standard equipment to any ham station now anyways

ya of course a cw transmitter is easy to build. But I am not about to toss my 706 so I can build my own rig. Heck, I don't have the time for that. I'm there to chit chat, not build cw transmitters that fit in kodak film boxes and crap.

Engineering, from what I saw of engineers when I was doing my physics degree, they were a bunch of drunken text book memorizing anal types. They generally had to read it in a text book before they were able to understand the most basic concept. No intuition at all.

Restructuring probably just reduced costs and effort on
the part of the FCC than anything else. Got rid of the
medical wavier for high speed CW issue too.

> to kill people.

Oh, come on. Surely even you can see the difference. A gun can be used by an individual for self-defense, recreational shooting, hunting, and so forth, in addition to it's use as a weapon in warfare situations. A thermonuclear device, on the other hand, is strictly a weapon of war - it cannot be used by an individual for self-defense, hunting, or anything else not related to warfare. In other words, these are not at all in the same catagory (hince are not treated the same when it comes to the law).

> Now, it would seem to me that the very same
> amendment you guys are pulling in the case of
> handguns, rifles and automatic weaponry must
> cover *all* firearms.

Again, handguns, rifles, and automatic rifles or handguns, can all be used for self-defense, hunting, and recreational shooting. And, yes, contrary to the opinions of most anti-gun advocates, an automatic can be used for hunting. In fact, the primary appeal of the automatic is that it can fire a single round in hunting situations, but can also be used an automatic when needed for self-defense. And both modes offer value for the recreational shooter (target practice, competitions, etc). Therefore, it is perfectly reasonable to say that all of these should be covered by that amendment.

Now, perhaps you can answer a question I have about anti-gun advocates. The clear goal of these people is the total elimination of private gun ownership in this country. At the same time, most of very these same people also tend to be anti-police - they often advocate a reduction in the number of police and advocate restrictions on police authority and activities. It these two agendas are accomplished, exactly who is going to defend my family? Are you, an anti-gun advocate (and most likely an anti-police advocate), going to do it?

Hansl:

Translaton: Almost a year into Restructuring, it has shown to be a dismal failure! After all, the intention was to greatly increase the TOTAL number of licensed amateurs, for the sake of increasing on-air activity and justifying our retention of vital spectrum. Predictably, all we've seen is a lot of upgrading of existing hams taking advantage of "grandfathering" if they ever passed a code test sometime during the last century. Obviously, giving away HF privileges for next to nothing doesn't seem to be working well enough to save us. Can you say "reallocation?"

Cecil:

How does my stated willingness to permit the reallocation of little-used
secondary amateur allocations above 500 MHz constitute a "death
wish" for the ARS? I believe we're not in any danger of losing much, if
any HF spectrum -- in fact, it is likely we'll actually *gain* allocations
below 30 MHz in the future. The ARS, in one form or another, will
probably go on way beyond the point where it has any true significance
in the context of 21st Century technological advancement. My only
"wish" is that we hams stop being the perennial spectrum hogs we've
always been, and permit the spectrum we can't or won't use to be
utilized in a more productive, socially responsible, and profitable manner
by commercial interests. My point of view is not merely intended to
reflect my being a good ham, but also a good, responsible citizen.
For a relatively small handful of hobbyists to tie up RF spectrum that
is potentially worth billions of dollars is hardly a responsible attitude.

Except when he doesn't have enough power, antenna performance,
or operating conditions to effectively employ SSB -- and CW would
still get a message through! Of course, that's a "Morse myth" or
something like that, isn't it?

It always amazes me that the people who whine loudest about being
prepared for emergency communications are least willing to support
the learning and mastery of one of the most practical, effective,
efficient, and universal modes of emergency communication. That
is one strawman who is very well stuffed; unfortunately, the straw is
extremely dry, and the strawman is constantly being chased by
someone with a very large box of matches!

Cecil:

I am not prejudiced against SSB for emergencies either, Cecil -- but
if I need to employ 5w CW, I can do so because the code testing
requirements in "force" during the time I was upgrading provided me
with functional proficiency in that mode. This is now something we
have lost in the ARS. If we can no longer effectively employ one of
our most durable modes in the ARS, how does that equate with
"live and let live" if someone's life could be at stake?

What if he has no power, no antenna, and no transceiver? Will CW still get a message through? Get real, Larry. It is personal choice whether to use FM, SSB, CW, cellphone, smoke signals, or drums. The slight chance that CW may someday be useful for an emergency is not enough of a reason to require all HF hams to pass a Morse code exam. I have known Morse code for 53 years and have never used it for an emergency. Besides personal fun, my Morse code effort and CW skill have been wasted.

Your sky-is-falling "could be" scenarios are legend, Larry. Far less
than 1% of the population know Morse code. What about all those people?
If Morse code is such a good idea, why not make it part of every driver's
exam.

If citizens don't have food and water stored, they may perish during
an emergency. Do you want to make storing food and water mandatory?

Every citizen decides how to prepare for emergencies or not to prepare
at all. That is live and let live and is as it should be in a free
country. Hams are no different. Some hams choose not to even own a
transceiver. How is Morse code skill going to save them?

Sorry Phil, From Webster's: "apostrophe - a mark ' used to indicate the
omission of letters or figures, the possessive case, OR THE PLURAL OF
LETTERS OR FIGURES" ("Figures" of the numeric kind)

My Encyclopedia says, "The plural of numerals is formed by adding an
apostrophe and s: 7's, 9's, the 1900's ..."

We are dealing with legislation in both cases, and legislation is never written in stone. Just as slavery was legal one day and illegal the next one, the same thing can happen to the "right to bear arms". Surely there is such a thing as a constitutional procedure to repeal amendments.

Well, as long as we're swapping life stories, I'll admit that I've always been sorry that I did not have a shotgun when a burglar broke into my apartment some years ago (while I was in it). Not because he broke in and tried to rob me in order to feed his habit, but because the son of a bitch came back that night and set the balcony on fire and we almost got burned alive.

Do you guys read the damn thing to the end before you hit the Reply button, or what? Both you and Dwight called me an "anti-gun" advocate even though I clearly stated in my previous message that "I do support a right to bear a handgun or two".

> I have absolutely no intention of killing anyone with
> a gun, but I also have no intention of allowing you to confiscate them.

Fine, I have absolutely no intention of killing anyone with a TND, but I also have no intention of allowing you to confiscate it. Let's assume I have one, for the sake of the argument.

> I DO have an intent to use them - the mere existance and presence - to

How the hell you gonna trade it if and when you lose it? Your statement is paradoxical: on one hand you're saying that it is not in our interest to retain as much spectrum as possible, and on the other that we need to trade it. Even so, I got your point and I happen to agree with it - I would gladly give up MHz's of UHF/SHF allocations for expanded HF bands, but the only problem is that people who are willing to pay gold for UHF have nothing to offer in return - they don't own any HF and they don't care for it, unless one day 80 meters becomes the best bet for cellphone use.

Yup. And lots of folks have upgraded to Extra.
>
>Looking at the no-HF/minimal-HF classes (Tech, Tech+, Novice) they have lost
>about 23,000 people since last April, and the full-HF classes (General,
>Advanced, Extra) have gained about 28,000.

Confusing the issue is the fact that since last April the FCC has been renewing Tech Pluses as Techs. Whether a Tech can operate HF is determined by his/her possession of proof of having passed the code test. End result is that the increase in Tech numbers comes from two sources: New Techs and Tech Plus renewals.

Back in mid February the first of the Technician licenses issued after the code test for it was removed began to expire. (Ten years after Feb 14, 1991). The good news is that, right on schedule, the number of Tech renewals surged upwards, indicating that lots of them are renewing.

http://www.ah0a.org

for lots of interesting numbers.

To equate the value of CW as being a skill that should be learned to save lives--and lift its importance to that level--opens up the argument that no one is worthy of walking the streets of humanity unless they have been trained in and have skill at each and *every* mode of ham radio, because each and *every* one of them has the same potential: to save lives! You are never in the majority of opinions, Larry, so I doubt you are in the majority of anything. There is not a majority of hams who know and can use each and *every* mode of ham radio. You don't have the skills or capability required to "save lives" in each, any, and all situations that you may encounter and *could* have used because you are a ham radio operator. Hell, most of us don't even have equipment with us at every moment of our potential to save a life! So, please turn in your license and join the ranks of those you despise--you are one of them.

Says who? According to the FCC's NPRM, restructuring was a:

"...proceeding to examine our rules for the Amateur Radio Service in an
effort to eliminate unnecessary and duplicative rules, as well as to
streamline our licensing processes."

Nowhere did they say it was their intention to increase the number of
licensed amateurs.

Not quite, Cecil. Dictionaries and the like are basically useless when it comes to issues of usage and application. They may indicate what's become ACCEPTED, but not necessarily correct. One example is a dictionary's explanation of the word "comprise." It's correct to say, for example, "The U.S. comprises 48 states." It is not correct to say "The U.S. is comprised of 48 states." Yet the latter is used. It's incorrect.

That means nothing, Jon. The FCC's motives, one way or the other, pro and con, were known 20 years ago. To paraphrase a recent poster, no regulatory commission in its right mind purposely makes statements that are going to raise any red flags or reflect negatively on that commission.

I don't see where it has made too much difference on HF, Hans. I heard a
lot of new activity right after, but it seems to me to have subsided again,
save for more activity on 10 meters.

>Looking at the no-HF/minimal-HF classes (Tech, Tech+, Novice) they have lost
>about 23,000 people since last April, and the full-HF classes (General,
>Advanced, Extra) have gained about 28,000.

Perhaps as a result of all the "old" Techs taking advantage of the
grandfater clause? The Tech Plus's upgrading to General?

Hardly a dismal failure as has been suggested by others, but as I surmised
before, a brief surge followed by "business as usual". The only one's who
really benefited by this were the 5WPM folks who took advantage of the Tax-day
Trade-up, and the FCC who now has fewer documents to process.

Yep, the repeal of slavery took a constitutional amendment and the repeal of
the right to bear arms will take a constitutional amendment. If guns are outlawed,
unarmed citizens will be absolutely helpless against armed criminals who don't
care about gun laws. England is doctoring her stats to try to hide the fact
that their armed criminals are out of control. If an armed perp gets off on
a technicality, that crime is erased from the stats.

In this country, guns have always been used for more good than evil. The
liberal press simply doesn't report the good done by guns. Gun laws will
disarm the good guys and leave the bad guys armed - bad idea.

How true. When I went to school in Los Angels areas of California in the 60's and 70's almost every kid I knew had access to a firearm at home. Back then you could buy a gun over the counter at Sears, Montgomery Wards, JC Penny, Pep Boys, True Value Hardware, etc. cash and carry. You had to be 16 to buy a long gun, and 21 to buy a pistol but there were no laws against your parents buying you a pistol if they wanted to.

Many of the kids I went to school with were regular hunters and outdoorsmen along with their fathers, uncles, etc. I had three younger siblings and we all had our own rifles which our parents gave us as Christmas presents around the ages of 10 or 12.

There was never a firearms related incident in any of my schools, or even in my neighborhood (unless you count the time one of my neighbors shot some low-life who was trying to rob the local shoe store during the original Watts Riots).

There were also no drug dealers and gang bangers on every corner when I was in school. The record companies would never dream of putting out any of the "Cop Killer" Rap music which is present today - and the kids' parents would kick their butts if they ever tried to bring that kind of crap home.

The police were allowed to actively suppress crime rather than just reacting to it after the fact, but now days every hoodlum is taught at a young age "I know my rights, I'll sue you for ..." And parents are regularly prosecuted for "Child Abuse" if they try to make any attempts to prevent an out-of-control juvenile from running wild on the streets.

Yes, we have a big problem these days in the schools - and in society in general - but it is not, and has never been, a gun problem. It's a people problem, and as long as nobody in power has the "brass" to address it for what it is, it will only get worse...

Nope...doing it by that method will add another wall in the learning process. If one is deaf it would be better to use the hand to feel the code. If one must use the eyes then use a flashing LED.

You ask what is the difference? Think about it.....if one uses flash cards with the 'dot and dash' then the brain must then translate the 'dot and dash' into a form the brain can interpret.

If one uses the eyes and/or the fingers that step is no longer needed.

Your brain will tend to memorize the dot and dash and add that delay. It won't show up until you try to get over 10 wpm. And by then its too late and you will need to relearn CW. Not fun.

Why do I know this? I did it that way. I also ended up memorizing the record(thats right the record). And had to re-learn it. I now do quite well at CW. But it WAS a tough row to hoe.

As I mentioned, Hans, it was a dictionary example, and
taken from many years ago. The problem with 'comprise'
didn't start after Hawaii and Alaska. And dumbing
down of the English language also started long before
it hit Amateur Radio.

Again, this matter has nothing to do with definitions, or
'disproving'--the encyclopedia and dictionary simply aren't sound
references when it comes to proper word usage and application.
Try any English usage book for starters. Or any English major
sitting on the copy desk of any prominent newspaper or magazine
to explain the ways of usage to you.

I thought you said that dictionarys are useless when it comes to issues
of usage and application.

> And dumbing
> down of the English language also started long before
> it hit Amateur Radio.

Actually, it has nothing at all to do with amateur radio.

If the English language has been "dumbing down", then it has been doing
so for several hundred years. Others claim it has been evolving.

But Richard,

What you are denying is that everybody is not like you and don't have the same interests or goals in the hobby. The requirements that *we* must meet are basic at this point, and each person should be allowed to make up his own mind to what license class he/she wishes to attain, and at what pace to go after their personal goals. No one is "preventing" anyone from attaining 20, or higher, WPM. The truth is, by setting oneself "above" anyone else because that person didn't enter the hobby under the same regimen, that person is doing harm to the hobby by discouraging new people from exploring our wonderful hobby. Instead, we "old heads" should be excitedly shaking hands of the newly testing people, congratulating them on their achievement, and once having assured them that they are WANTED within the ranks, ENCOURAGING them to explore the facets of the hobby, helping them with the privileges they now enjoy, and on to HF and our beloved CW. This is the way to ensure the future of the hobby and the use of Morse. Time marches on, Richard, things change, and you and I will be pushing up daisies some day, and the ones left behind will do what they want anyway. For every would-be amateur that we disdainfully regard thru our bifocals because their ticket says "Technician", I believe there is another person who received that treatment and told us to go to hell with his feet. Oh, he didn't say anything, but he walked away, got back in his car, and perhaps got on a CB and called, "Break, skipland, ya gotta copy?". Or drove out to the golf course for nine holes. All to the detriment, not only to the hobby itself, but to the rest of us who hope and presume we will have our spectrum into the future.

Ranting at the newbies is NOT the answer. They cannot help what regulations exist--they only fulfill the requirements for the license as they are. ENCOURAGEMENT to ever more achievement, welcoming new folks within our fraternity as equals, and readily answering their questions without hint of superiority will earn their friendship, respect and will assure the survival of CW and the hobby itself. Driving people away with self-righteous pontification about 30 WPM CW will send us the way of the dinosaurs. And that's my opinion.

Your example is about a half-century old. Languages, with the exception of dead languages like Latin, evolve. Please feel welcome to join the rest of us in the 21st century.

So your point in quoting the dictionary was to show that there are 50
states rather than 48?

Yeah, right.
